Auklet Charter Services

Greetings,

Please approve the expansion of the EVOS restoration boundary to include the Copper River Delta including the Bering and Martin River systems. For decades the Trustee Council has stressed an ecosystem approach to research, restoration and habitat protections. I find it hard to believe that it has taken this long to consider this expansion. One needs to look at any number of satellite images of the area to see just how connected Pr. Wm. Sound and the Copper River Delta are. see attached images. Studies have also shown that birds and marine mammals, many impacted by the Exxon oil spill travel back and forth between the two. Feed on the Delta, nest and rear young in the Sound. Marbled and Kittlitz's Murrelets, Harbor seals, Common Murres, Killer whales, Steller sea lions. It has also been shown through drifter studies that currents can even run west to east on occasion, from Pr. Wm. Sound to the Delta. Essentially one continuous ecosystems.

Please make this very important change. I wish to also express my feelings to keep the EVOS fund intact in perpetuity for research, restoration and habitat protection. A real legacy for Alaska.

Thank you for your work.

Sincerely,
David Janka

Koniag

Please see attached letter regarding Resolution 20-D

December 14, 2020

EVOS Trustee Council
4230 University Drive, Ste 220
Anchorage, AK 99508-4650

RE: RESOLUTION 20-D OF THE EXXON VALDEZ OIL SPILL TRUSTEE COUNCIL REGARDING AMENDMENT OF THE RESTORATION PLAN TO INCORPORATE AN ECOSYSTEM APPROACH TO THE OIL SPILL BOUNDARY

Dear EVOS Trustee Council Members:

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the “New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill” proposal submitted by the EVOS Think Tank of Citizens. With this as background, Koniag submits the following comments on **Resolution 20- D**.

Koniag opposes Resolution 20-D. This resolution would remove the limiting conditions that must exist for the Trustee Council to approve restoration activities outside the boundaries of the defined spill area. While Koniag recognizes that many marine and terrestrial species move from the spill impacted area to areas not impacted, we believe that funding of activities and projects be constrained to the defined spill area. Furthermore, any funding of activities outside the boundary of the defined spill area should be very limited, have clearly delineated requirements and be subject to public input. The oil spill devastated many communities and species in the defined spill area while at the same time, the oil spill stimulated the economy of communities outside the defined spill area by providing jobs and revenue in the clean-up effort. The trauma from the oil spill is still felt in the defined spill area and the focus of funding activities and projects need to remain in that area.

Koniag understands that the four draft resolutions, if approved, would continue current “spend down” efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council.

Koniag disagrees with this approach. Instead, Koniag supports the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Koniag region communities, commercial and subsistence fishermen and resources were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources and continued reverberations from the human and economic impacts of the spill. Residents still discuss the trauma of the oil spill in ways very similar to the devastation of the 1964 earthquake and tsunami. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

koniag.com

P (907) 561-2668

F (907) 562-5258

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the four resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Thank you for your consideration.

Sincerely,

Shauna Hegna
President

The Tatitlek Corporation

Comments on attached

December 15, 2020

Dear Trustees and Board Members,

The Tatitlek Corporation (“Tatitlek”), an Alaska Native Village Corporation, duly formed and in good standing with the State of Alaska, objects to each of the Trustees’ four proposed resolutions. Each resolution alters the way the Trust would be administered in ways that are inconsistent with the purpose of the Trust. Each resolution is not in the best interest of the people and resources the Trust was created to benefit – and does not fit the comprehensive interdisciplinary recovery and rehabilitation objectives.

The resolutions appear to work together to adopt a spend-down approach to administering the Trust with reduced oversight, but in a way that does not connect expending funds towards the purposes for which the Trust was created—to mitigate the effects of EVOS for the benefit of those affected by it. If the Trustee Council is looking for alternatives to the status quo, then it should consider the proposal from the EVOS Trust Think Tank of Citizens dated June 5, 2020, among others. The Think Tank’s proposal would be consistent with the use of the Trust for the benefit of those affected by the spill, which affects are still ongoing, whereas the proposed resolutions do not.

Background

The Tatitlek Corporation owns and manages over 100,000 acres of land in and around the Exxon Valdez oil spill site, including the islands around Bligh Reef where the ship ran aground. Populations of fish, marine mammals, seabirds and shellfish were devastated due to inadequate preparation and slow clean up response time. People and economies in the Prince William Sound communities suffered in the months and years following the spill. The Tatitlek communities were especially affected. Commercial fishing and subsistence activities such as hunting and fishing, were severely impacted due to contamination and extremely low wildlife/fish populations. The fisheries, canneries, and commercial fishing businesses all suffered and many went bankrupt. As a result, the Exxon Valdez Oil Spill (EVOS) Settlement Fund was established to benefit those affected by the spill. However, to this day the area communities, ecosystems and even beaches still show the effects of the spill. Herring, kelp and clam beds still have not returned to pre-EVOS days.

Draft Resolution 20-a

The Tatitlek Corporation objects to this resolution. While efficiency in administration is a worthy goal, it cannot come at the cost of the full participation of the Trust's beneficiaries. "It is well established . . . that it is the duty of a trustee to administer the trust solely in the interest of the beneficiaries." *State v. Univ. of Alaska*, 624 P.2d 807, 813 (Alaska, 1981).

As beneficiaries of the Trust, shareholders of The Tatitlek Corporation and the Corporation itself should have a voice in the process. This proposed resolution erodes the beneficiaries' ability to inform the Trustees of what is in the beneficiaries' best interest.

The resolution does more than cut away at Tatitlek's ability to weigh in on the Trustees' decisions. In 2000, the U.S. Government published a [guide](#) to address issues specific to the Environmental Protection Agency's lack of meaningful consultation and collaboration with Native Americans and Alaska Natives. In that document the EPA region 10 (serving Alaska and other areas of the Pacific Northwest) outlined its policies *designed to encourage regular participation* by Tribes and Alaska Natives in decisions affecting tribal members and resources. Despite these policies, this issue persists today. This proposed resolution is a step in the wrong direction—we should be looking for increased opportunities to collaborate and council together, not less.

Despite the above-referenced clear policy goal of the government in regards to environmental issues that affect Alaska Natives, this draft resolution is designed to reduce public participation and will limit the input Alaska Natives may provide to the Trustees' decisions.

Because it is not in Tatitlek's and other beneficiaries' best interests, and because it goes against public policy, the Trustees should not adopt this resolution.

Draft Resolution 20-b

The Tatitlek Corporation objects to this draft resolution. While the resolution states that the Trustees will continue to oversee multi-year projects, removing the oversight mechanism of annual approval of each year's funds for multi-year projects can only reduce oversight on such projects.

The large amount of funds involved in these kinds of large-scale, multi-year projects require a higher level of scrutiny. The Trustees should not adopt this resolution.

Draft Resolution 20-c

The Tatitlek Corporation objects to this proposed resolution. Combining the separate habitat and research funds will act to streamline the process of spending down the corpus of the Trust, but that approach is at odds with Tatitlek's best interests.

As the Trustees know perhaps better than just about anyone, environmental problems like those created by EVOS can take many decades to correct. In consideration of this, Tatitlek and others provided conservation easements *in perpetuity* as part of the negotiated agreement with the state and federal governments that were designed to help implement the government's settlement with Exxon and facilitate recovery efforts. This turn towards a quick spend-down of the Trust is not consistent with these earlier efforts to take a longer view. It also threatens the benefit of Tatitlek's bargain from those earlier transactions.

Instead of looking for ways to streamline the spend-down of the Trust, Tatitlek hopes to continue to see the Trust administered in a way that will continue to remediate the oil spill's effects, which are still ongoing. Because it would likely lead to a quick spend-down of the Trust, the Trustees should not adopt this resolution

Draft Resolution 20-d

The Tatitlek Corporation objects to this proposed resolution. On its face, this resolution is not consistent with the Trust's objectives, and is completely unnecessary.

The language this resolution seeks to remove are exceptions to limits on restoration actions, which must be performed in the area identified as most affected by the spill unless:

when the most effective restoration actions for an injured population are in a part of its range outside the spill area, or

when the information acquired from research and monitoring activities outside the spill area will be significant for restoration or understanding injuries within the spill area.

By seeking to remove the first part, the Trustees admit that the actions they seek to perform, but cannot under this limitation, are not "the most effective restoration actions" that could be attempted. If the restoration actions the Trustees hope to pay for outside of the currently established spill area are the actions that are the "most effective" to restore the area, then there is no need to remove this language. The only reason to remove it is to enable the Trustees to take action that is less effective. If the ecological approach is, in fact, the best and most effective approach as the draft resolution suggests, then this language should remain unchanged. The

Trustees are still permitted to do what is most effective, even with this limitation, if the most effective thing to do is to perform restoration actions outside the spill area.

By seeking to remove the second part, the Trustees admit that the research and monitoring activities they seek to perform, but cannot under this limitation, will not be significant for restoration or understanding injuries in the spill area. The only reason to remove it is to enable the Trustees to take action that will not be significant in terms of restoration or understanding injuries caused by the spill. If the ecological approach is, in fact, the best approach to continue the Trustees' restoration efforts, then this language should remain unchanged. The Trustees are still permitted to do what will significantly restore or lead to understanding injuries caused by the spill, even with this limitation, if those actions happen to occur outside the spill area.

In combination with the other draft resolutions, this resolution would enable the Trustees to spend down the Trust anywhere in Alaska and for almost any reason. The limitations currently in place between habitat and research, each with its own separate account, would be gone; the geographical restrictions would be lifted; the opportunity for public comment would be substantially reduced; and large, multi-year projects would be evergreen until the money is gone, rather than requiring regular oversight and approval over the course of performance. Taken together, these changes could act to rapidly spend down the trust—but not necessarily for the benefit of the Trust's beneficiaries.

This approach is not consistent with Tatitlek's best interests. For these reasons, the Trustees should not adopt these resolutions

Thank you for the opportunity to comment on these draft resolutions.

Sincerely,

Roy Totemoff
CEO

Chugach Alaska Corporation

Thank you for the opportunity to provide public comment on behalf of Chugach Alaska Corporation (Chugach). Chugach opposes Resolution 20-D because expanding funding outside of the spill boundary goes against the original intent of the EVOS Trust and will only serve to advance the EVOS Trustee Council's agenda to spend down remaining funds and eventually dissolve the EVOS Trust with minimal public participation. Resolution 20-D should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-affected area.///

Draft Resolution 20-D/would amend/the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary. This/means that EVOS Trust funds/could be used to fund efforts/outside of the spill boundary./The original spill boundary was identified through a rigorous process at the time and should not be expanded. Allowing funding to/be/spent outside of the spill-affected areas would reduce important opportunities for funding within the current spill boundary and further dissolve the Trust. /

Of all the groups negatively impacted by the EVOS, Alaska Natives were among the most devastated, both economically and culturally. Despite this, of the hundreds of millions expended by the EVOS Trustee Council, very little of those funds have directly benefited the Alaska Native communities in the spill impacted area. In fact, other than/the more than/\$600/million/that has been used for land acquisitions,/including the government purchase of native lands which has always been controversial,/we estimate only about 1% of funding has gone to Alaska Native communities and most all of that funding occurred/20 years/ago.///

Today, with/a little over/\$150 million left in EVOS Trust funds, we believe those funds should/be directed to assisting the/communities/most/affected by the spill./The Council must consider not only wildlife and water, but also the people/and the economies of these small communities.//

Chugach strongly believes that EVOS Trustee Council funds should be used to fulfil the original intent of the Trust: To address the social and economic impacts on the people and communities most adversely affected by the spill. That includes all of the Native Villages in the Chugach region (Tatitlek,/Chenega, Eyak, Nanwalek and Port Graham) and all of the incorporated municipalities of the Chugach region (Cordova, Valdez, Seward and Whittier).//

At the/time/the EVOSTC was established, the Council/chose not to spend Exxon "damage reparations funds" to help Chugach villages and residents recover from the spill./The harsh reality is that oil and its harmful effects still linger in Southcentral Alaska/and there remains unrecovered resources. If the council's sunset plan is successful/(which includes the passage of 20-D)/,the consequences of EVOS/will linger/long after the/funds/that are/dedicated to/restoring the injured ecosystem/are gone./The money will/be gone, but the oil/and its impact/will remain.//

The following is an excerpt from a speech by Walter Meganack, Sr. Port Graham Elder and Chief after EVOS occurred-on/March 24, 1989: "It was early in the springtime. No fish yet. No snails yet. But the signs were with us. The green was starting. Some birds were flying and singing, the excitement of the season had just begun, and then we heard the news. Oil in the water. Lots of oil.

Killing lots of water. It is too shocking to understand. Never in the millennium of our tradition have we thought it was possible for the water to die. But it is true. We walk our beaches. But the snails and the barnacles and the chitons are falling off the rocks. Dead. Dead water."//

The four resolutions that the trustee council have proposed greatly reduce and, in some cases, eliminate the opportunity for meaningful public participation. We urge you not to adopt any of the resolutions until meaningful public participation with the people and communities in the spill-affected area can be consulted with and involved in the process.

Rick Steiner

I was the University of Alaska's marine advisor for Prince William Sound, based in Cordova, from 1983-1996, and was a part time commercial fishermen there during that time as well.

I strongly support Resolution D, as it is an ecologically sound amendment to the Restoration Plan. The 1991 Consent Decrees did not discuss or require an oil spill boundary, and the spill boundary established in the 1994 Restoration Plan was arbitrary, unnecessary, and scientifically unsupportable. We said so at the time. It make absolutely no ecological sense. In particular, the area east of the eastern boundary line is critical to the functions of PWS and the rest of the oil spill region "downstream" to the west. Clearly the entire Copper River Delta, Bering River, Martin River, and Controller Bay are integral to the ecosystems to the west.

Thus, I strongly endorse the language change proposed in Resolution D, to eliminate the previous limitations to conducting Restoration projects outside of the arbitrary spill boundary in the 1994 Restoration Plan. Essentially, the Trustee Council needs discretion to be able to conduct Restoration activities where it deems necessary and appropriate, unencumbered by such arbitrary boundary lines, including replacement of injured resources and resource services with uninjured resources and services.

I truly appreciate that finally, after 26 years, this can now be fixed. Thanks!

Rick Steiner, Professor
University of Alaska (ret.)
Oasis Earth, Anchorage

Rick Steiner

Corrected copy to my previous submitted comment:

I was the University of Alaska's marine advisor for Prince William Sound, based in Cordova, from 1983-1996, and was a part time commercial fishermen there during that time as well.

I strongly support Resolution D, as it is an ecologically sound amendment to the Restoration Plan. William Pegau

I agree with the resolution to allow funding for items outside the traditional region with the conditions included in the draft resolution.

Janet Alderton

To fulfill its original mandate to protect and restore the oil spill region, EVOSTC restoration boundaries must represent the ecosystems themselves — Dear Trustee Council, please follow in Teddy Roosevelt's footsteps and extend boundaries to include the entire Delta/Sound bioregion, all the way east to the Bering River and Cape Suckling ... and then retire those coalfields in the name of restoration. Or as they say in the healing arts, first do no more harm.

The remarkable Delta and Sound are two halves of a beating heart. Let's keep that heart beat healthy.

Quinn Selitsch

Please extend the Exxon Valdez Oil Spill (EVOS) boundary to include the entire Copper River Delta. The delta was effected by the EVOS also, and it needs additional protections.

Jake Swenson

Protect what has given us so much! This oil is poison and we've seen what it has done to our waters before and I don't ever want to see this earth's children hurt like that again.

Sarah Cavarretta

I fervently support the extension of the EVOS restoration boundary. It is imperative for the region as well as community that this measure be extended.

The failure to do so would be catastrophic.

The legacy of industrial spills have proven to be an existential threat to wild life, ecological health, and a death sentence to native communities.

We as a global community can no longer bargain the livelihood and health of native peoples and our precious water; all for the sake of profits to a select few corporations that monopolize wealth through means of genocide.

Extend the EVOS. Break the cycle of short term profits causing long term chaos. Choose life over destruction, we know where the latter leads.

Gloria Fletcher

Please vote yes on the amended boundary and include the scenic and valuable Copper River Delta for ecological restoration activity.

Kailea Frederick

I am writing to SUPPORT the extension of the Exxon Valdez Oil Spill (EVOS) Restoration Boundary to include the entire Copper River Delta.

Thank you,
Kailea

Clayton Jarrard

I support the extension.

Julie Rosas

I strongly support Draft Resolution D.

Margo Waring

It is time to recognize that the boundary drawn between Prince William Sound and the Copper River estuary wetlands was not based on sound ecological investigation but more on the demands of politics and finances. Spills in each area will affect the neighboring area. It is time to right that wrong and include both as areas by expanding the EVOS boundary and responsibility.

Melody Overstreet

I support expanding the boundary of restoration, as all land and waters are connected and the way we clean this oil spill up will have ripple effects for generations to come.

LaMont Hamilton

I am hereby making a public comment SUPPORTING the extension of the Exxon Valdez Oil Spill (EVOS) Restoration Boundary to include the entire Copper River Delta.

Shannon Rudd

I am eager to express my support for amendment D to the 1994 restoration plan to incorporate expansion of a new habitat restoration. This is incredibly important for the migrant animals that travel throughout the delta. This amendment is critical.

Damien Scobie

I am eager to support this initiative. It is imperative that we do what we must to mitigate the lingering damage of the region.

I am SUPPORTING the extension of the Exxon Valdez Oil Spill (EVOS) Restoration Boundary to include the entire Copper River Delta!!!

Andrea Larson

Please include protections for the COPPER RIVER DELTA since a sound and it's wetlands are two parts of a whole!! The whole must be protected for the protections to be viable! Pollution affects us all including water ecosystems. We are all connected!

Tyler Huling

Please protect this sacred land for generations to come.

Skye Steritz

Dear EVOS Trustee Council,

My name is Skye Steritz. I have three Masters degrees in Water Resources Policy & Management. I understand hydrologic dynamics, and I know that the previous boundary line drawn to define the EVOS was arbitrary. It is time to redraw this line to reflect the connectedness and constant interaction of the entire Copper River Delta (including the Eastern Delta Region) with Prince William Sound. Science shows that thousands of species travel between the Delta and the Sound, including some of the species injured by the EVOS.

I live on the incredible Eyak ancestral homelands in a town now called Cordova. I enthusiastically SUPPORT the extension of the EVOS Restoration Boundary to include the entire Copper River Delta.

Any industrial development on the delta would most likely transport pollution to Prince William Sound due to the hydrologic dynamics and ocean gyres. (We see from the attached NOAA photo that the Copper River Delta is the freshwater counterpart of the Prince William Sound marine ecosystem. In the words of David Grimes, the Delta and the Sound are "two halves of a beating heart".)

In order to prevent further injury to any of the populations harmed by the Exxon Valdez Oil Spill, we must permanently protect the Bering River Coalfields.

I ask you, as the responsible trustees that you are, to support the retirement of the Bering River Coalfields owned by KADCO. Mining in this region would risk precious ecosystem services offered by the interlacing Bering and Copper River wetlands and old-growth forests. These ecosystems provide climate stabilization, water purification, and vast spiritual and cultural benefits, allowing Native peoples to practice their traditions.

Unfortunately, global demands for coal are not diminishing; they are increasing. Now, there is even greater need to extinguish the threat of the Bering River Coalfields being developed.

Sacrificing our last wild salmon strongholds left on Earth must not be allowed. Thriving, roadless salmon watersheds like this one are absolutely priceless and irreplaceable. The Bering River ecosystem is a vast, contiguous wilderness – an immense wildlife corridor. The watershed is fully intact and pure enough to support returns of thousands of spawning coho (silver) and thousands of spawning sockeye (red) salmon each year.

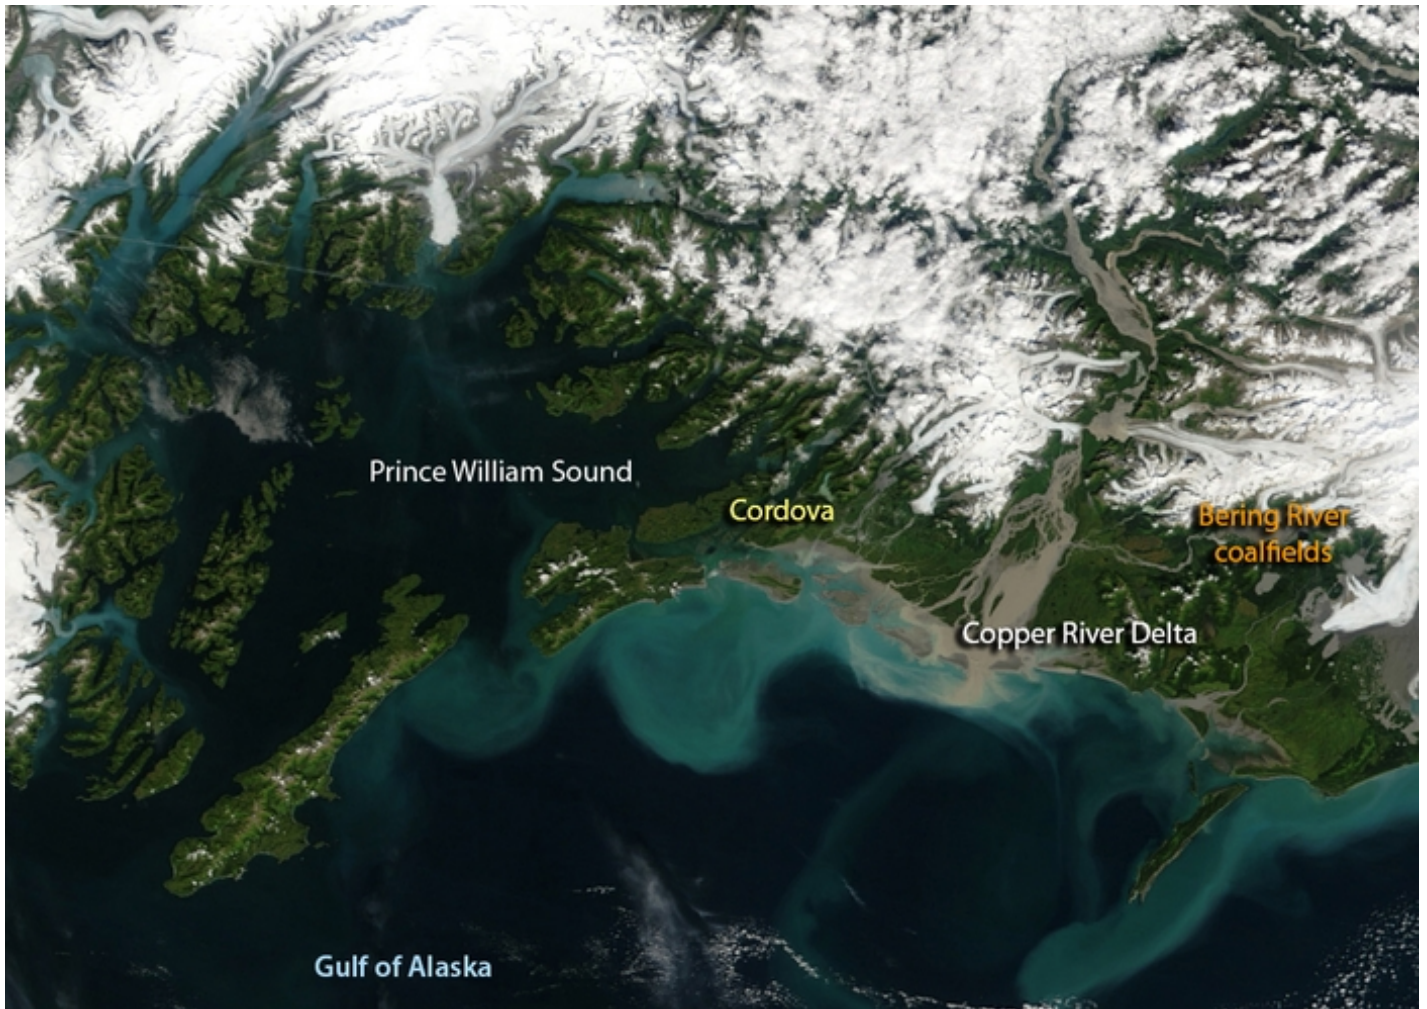

Protecting all of the endangered and impacted fish and wildlife will allow the oil spill region to fully recover once and for all.

As the daughter of a former Exxon employee, I feel strongly that it is our duty to heal the wounds caused by the previous generation. We have a chance to relieve the pain felt by the people of this region. We have a chance to do what's right. Let's stand on the right side of history. I am part of the generation who will inherit all of the impacts of industrialization, and I ask you to use your power

to preserve the wilderness we still have in this region.

Thank you for caring, and thank you for acting in the best interest of the people of Alaska.

Sincerely,
Skye Steritz

Sophia Santos

I support this amendment

Sarah Holloway

Please extend the boundaries pertinent to this amendment. Bolstering movements for environmental protection and progress, particularly after the damage caused during the Trump presidency, is vital.

maureen roche

YES

Eve Arce

I ask that Evos extend to include full Copper river Delta as all of it needs protecting. Thanks

Sean DeLawder

Dear EVOS Trustee Council,

My name is Sean DeLawder. I'm a concerned citizen of the Willamette Valley, and as a young person, I believe we must protect the wild salmon ecosystems we still have left. I absolutely approve changing the EVOS restoration boundaries to incorporate an ecosystem approach.

Extend the restoration boundary to include the entire Copper River Delta region out to the Bering River Coalfields.

I also wholeheartedly encourage EVOSTC to support the permanent protection of the Bering River coalfields owned by KADCO.

Protecting all of the endangered and impacted fish and wildlife will allow the oil spill region to fully recover once and for all.

By restoring and protecting these ecosystems, we also honor the Eyak People and their homelands. I believe this amendment will further protect the waterways and wildlife that are unique and sacred to this region.

Thank you.

Lauren Padawer

I am writing to show my SUPPORT of extending the Exxon Valdez Oil Spill (EVOS) Restoration Boundary to include the entire Copper River Delta.

.

Extension of the arbitrarily drawn boundary will allow restoration funds from the EVOS Trustee Council to be used to protect the ecologically critical (and connected) Eastern Delta Region, including the Bering River Coalfields.

.

Prince William Sound, victim and survivor of the 1989 Exxon Valdez oil spill, exists side by side with the neighboring Copper River Delta. If the Sound is North America's finest marine ecosystem, then the Delta is its wetlands equivalent. They are like two halves of a beating heart... A pipeline spill today could easily flow into the Copper, down to the Delta, and then over into the Sound. Similarly, any industrial accident in the Delta region, from the Bering River in the east to Cordova in the west, could likewise affect the Sound.

.

I fully support the permanent protection of the Bering River Coalfields in the name of dAXunhyuu (the Eyak People) to steward for all time and honor this precious wild salmon ecosystem.

Thank you,
Lauren Padawer

Lindsay Branham

Please please preserve this gorgeous land.

Hayati Wolfenden

Roosevelt said of the giant redwoods that they should be kept as we keep a great and beautiful cathedral. So it is with all our wild lands. I want to voice my support of keeping Shepard point protected from oil spills. The area does not benefit from destructive development projects. Wild salmon runs, Native culture, and the natural beauty of the area are worthy of our protection.

Alexander Bergman

I'd just like to add my voice in support of the amendment to resolution D, if not even stronger and more proactive language. The ocean, the land, the air: they and their nonhuman citizens have not been immobile since the oil spill, and beyond the harm that remains, the ongoing climate crisis demands that we establish and defend their rights as fastidiously as we defend our own.

Gabrielle Scundi

I support the extension of the 1994 Restoration plan. The damaged caused by oil spills affects more than just humans that might be living in the area, and we have the responsibility of protecting our ecosystems from harm.

Maggie Friedman

Please leave this wild, sacred land alone!! For the sake of nature and future generations!

Harrison Pickering

Please include the entire Copper River Delta in the cleanup plan !

Lynda Jones

YES, the boundary needs to be extended

Kennon Lorick

I support the extension of the EVOS Restoration Boundary to include the entire Copper River Delta.

Sage Saatdjian

Please extend the EVOS Restoration Boundary to the entire Copper River Delta. We must protect this waterway and ecosystem from exploitation and contamination.

Kalish Casselfeiss

I SUPPORT the extension of the Exxon Valdez Oil Spill (EVOS) Restoration Boundary to include the entire Copper River Delta.

Hannah Thomas

The wealth of healthy land is indispensable generationally and interspecifically. We ought to use this holistic approach to its protection as one of the first steps in righting our centuries of placing capital value above life.

Daniela Arseda

We must do everything in our power to allow the spill region to fully recover once and for all. I am here to give my SUPPORT for the extension of the EVOS Restoration Boundary to include the entire Copper River Delta.

The boundary drawn between Prince William Sound and the Copper River estuary wetlands is arbitrary as many animals travel between the Delta and the Sound. The entire ecosystem deserves to be protected.

Thank you,
Daniela Arseda

Adam Sippola

I SUPPORT the extension of the Exxon Valdez Oil Spill (EVOS) Restoration Boundary to include the entire Copper River Delta.

payden vonich

i support more time being given

holly poole-kavana

please extend the boundary of the Exxon Valdez Oil Spill Restoration Area to include the Copper River Delta. As it stands now the boundary is arbitrary and should extend to include this valuable ecosystem and protect it from future harm.

Mayme Bouy

Wetlands are the lungs to our nations, they are vital and must be taken care of by the force that is seemingly greater these days, us. Respect the land, be responsible for future generations and for the now. Thank you.

Lauren Armony

I am writing to support the extension of the EVOS to include the entire Copper River Delta, following an ecosystem approach to restoration. As a child I witnessed the atrocity of the Exxon Valdez oil spill, and know there is so much healing still needed for this land. Water connects everyone, the Exxon Valdez spill still effects us all.

Taylor Wolf

Please expand the EVOS Restoration Boundary to include the entire Copper River Delta. These waters and their wetlands need to be cared for and protected.

Catherine Jenkins

I am commenting to support the extension of the EVOS to include the entire Copper River Delta, following an ecosystem approach to restoration. We must protect what makes this country so great, our natural resources. Protecting this resource will be an investment in the future for generations to come.

Luciana Mintiero

Please agree to the ecosystem approach, since there's overlap between the "spill zone" and neighboring land / wildlife populations. Thanks!

Mary May

The safety and purity of our waterways is paramount, including the Delta! For this reason I support the Draft D!

Gianna Rivera

Dear EVOS Trustee Council,

My name is Gianna Rivera. I'm a concerned citizen of America, and I believe we must protect the wild salmon ecosystems we still have left. I absolutely approve changing the EVOS restoration boundaries to incorporate an ecosystem approach.

Extend the restoration boundary to include the entire Copper River Delta region out to the Bering River Coalfields. Any industrial development on the delta would most likely transport pollution to Prince William Sound due to the hydrologic dynamics and ocean gyres... Due to the interconnection between these ecosystems, I wholeheartedly encourage EVOSTC to support the permanent protection of the Bering River Coalfields owned by KADCO.

In order to prevent further injury to any of the populations harmed by the Exxon Valdez Oil Spill, we must invest in the preservation of the Bering River Region. We must support and protect the restoration of these sacred, unique waterways, and all the fish and wildlife unique to the Bering River Region.

These ecosystems are sacred, the Eyak people are sacred, the salmon are sacred and need to be protected. The abundance of wildlife, clean water, and wilderness is priceless, these ecosystems and their biodiversity are necessary for life to continue to grow and thrive in a balanced and healthy way for all living beings, for our children yet to come these places must continue to be protected. They cannot be replaced, To fight against climate change, these places must be protected. I've seen so many species go extinct already in my short lifetime, fewer insects, fewer birds, fewer wild places, I cant sit by and stay silent when i have seen and felt firsthand the necessity of protecting the homelands of indigenous peoples, and learning from their lifeways.

The most important thing we can do in these dire times is acknowledge, honor, and respect the original peoples of these lands who know how to steward and care for the ecosystems in a balanced and sustainable way. As we move forward into this next decade, it is imperative to protect the entire Copper River Delta region out to the Bering River Coalfields, the Eyak peoples homeland. For the sake of having enough science and foresight and heart to know that for the good of the world we need permanent protection for this ecosystem, and all ecosystems.

David Grimes

Dear Trustee Council—I am writing to support Draft Resoluitiin D, to extend the oil spill restoration boundary to protect the entire Delta/Sound ecosystems.

Prince William Sound, victim and survivor of the 1989 Exxon Valdez oil spill, exists side by side with the neighboring Copper River Delta. If the Sound is North America's finest marine ecosystem, then the Delta is its wetlands equivalent. They are like two halves of a beating heart.

The Copper River Delta region—stretching from the Bering River country and Cape Suckling in the east all the way to Cordova and Prince William Sound in the west—is comprised of a vast set of contiguous wetlands and coastal rivers that drain into the North Pacific Ocean. The Copper River is world-renowned as an archetypal wild salmon river, hosting some of the most highly prized salmon on earth. And its contiguous Delta wetlands in the Chugach National Forest represent by far the most valuable fish and wildlife habitat in the entire U.S. National Forest system.

Mineral-rich glacial sediment-laden waters of the Copper, and its smaller companion rivers like the Bering, make an immediate right turn upon entering the North Pacific Ocean and are carried west by a coastal current towards Prince William Sound. Some of that water then flows into the Sound through Hinchinbrook Entrance and up into a gyre around the central Sound—fertilizing the ecosystem with iron and other nutrients and increasing ecosystem productivity—before exiting the Sound through its southwest passages and straits.

The Prince William Sound Science Center, created in the wake of the oil spill and serving as a primary research institute in the bioregion, sums up this remarkable interplay between the Copper River Delta and Prince Willian Sound simply by calling its newsletter "Delta Sound Connections."

Here's another connection. The oil that spilled into the Sound in 1989 from the ruptured Exxon Valdez supertanker had spent most of its last hundred miles in the Trans-Alaska Pipeline running parallel to the Copper River...like two rivers side by side, one with fish and one with oil. A pipeline spill today could easily flow into the Copper, down to the Delta, and then over into the Sound. Similarly, any industrial accident in the Delta region, from the Bering River in the east to Cordova in the west, could likewise affect the Sound.

In 1907 President Teddy Roosevelt created the Chugach National Forest primarily as a fish and forest preserve, and its eastern boundary was the Copper River. In 1909 Roosevelt extended the Forest boundary further east to include the entire Copper River Delta region all the way to the Bering River and Cape Suckling. Roosevelt did so to protect the Delta's Bering River coalfields from deleterious development and monopolic control by the Robber Barons of the day.

100 years later we recognize the wisdom of Roosevelt's conservation foresight—the health of fish and wildlife and their habitat on the Delta is essential to the health of Cordova's subsistence and commercial fishing economies. Indeed, Cordova—situated right between the Delta and the Sound—might not have survived the economic and ecological mayhem of the oil spill in the Sound

without a healthy Delta.

How can we further protect the Delta/Sound region? After public outcry the State of Alaska recently cancelled plans for Gulf of Alaska oil and gas leases in the Bering River/Controller Bay/Katalla region of the east Delta. And now we have the additional opportunity to retire the Bering River coalfields themselves and protect the Delta once and for all.

When the Exxon Valdez Oil Spill Trustee Council (EVOSTC) was created to oversee Exxon's \$900 million civil settlement, the Council was given the mandate to restore the environmental health of the oil spill region, and restoration was to be done on an ecosystem basis. But when geographic boundaries were created for the sake of restoration, they were not drawn on an ecosystem basis—the restoration boundary arbitrarily ran down one side of the Copper River, leaving the eastern half of the Delta ecosystem completely off the map.

To fulfill its original mandate to protect and restore the oil spill region, EVOSTC restoration boundaries must represent the ecosystems themselves:

Dear Trustee Council, please follow in Teddy Roosevelt's footsteps and extend boundaries to include the entire Delta/Sound bioregion, all the way east to the Bering River and Cape Suckling...and then retire those coalfields in the name of restoration. Or as they say in the healing arts, first do no more harm.

The remarkable Delta and Sound are two halves of a beating heart. Let's keep that heart beat healthy.

Thanks and blessings on your important work.

David Lynn Grimes
Cordova, Alaska

David Grimes

Dear Trustee Council—I am writing to support Draft Resolution D, to extend the oil spill restoration boundary to protect the entire Delta/Sound ecosystems.

Prince William Sound, victim and survivor of the 1989 Exxon Valdez oil spill, exists side by side with the neighboring Copper River Delta. If the Sound is North America's finest marine ecosystem, then the Delta is its wetlands equivalent. They are like two halves of a beating heart.

The Copper River Delta region—stretching from the Bering River country and Cape Suckling in the east all the way to Cordova and Prince William Sound in the west—is comprised of a vast set of contiguous wetlands and coastal rivers that drain into the North Pacific Ocean. The Copper River is world-renowned as an archetypal wild salmon river, hosting some of the most highly prized salmon on earth. And its contiguous Delta wetlands in the Chugach National Forest represent by far the most valuable fish and wildlife habitat in the entire U.S. National Forest system.

Mineral-rich glacial sediment-laden waters of the Copper, and its smaller companion rivers like the Bering, make an immediate right turn upon entering the North Pacific Ocean and are carried west by a coastal current towards Prince William Sound. Some of that water then flows into the Sound through Hinchinbrook Entrance and up into a gyre around the central Sound—fertilizing the ecosystem with iron and other nutrients and increasing ecosystem productivity—before exiting the Sound through its southwest passages and straits.

The Prince William Sound Science Center, created in the wake of the oil spill and serving as a primary research institute in the bioregion, sums up this remarkable interplay between the Copper River Delta and Prince William Sound simply by calling its newsletter "Delta Sound Connections."

Here's another connection. The oil that spilled into the Sound in 1989 from the ruptured Exxon Valdez supertanker had spent most of its last hundred miles in the Trans-Alaska Pipeline running parallel to the Copper River...like two rivers side by side, one with fish and one with oil. A pipeline spill today could easily flow into the Copper, down to the Delta, and then over into the Sound. Similarly, any industrial accident in the Delta region, from the Bering River in the east to Cordova in the west, could likewise affect the Sound.

In 1907 President Teddy Roosevelt created the Chugach National Forest primarily as a fish and forest preserve, and its eastern boundary was the Copper River. In 1909 Roosevelt extended the Forest boundary further east to include the entire Copper River Delta region all the way to the Bering River and Cape Suckling. Roosevelt did so to protect the Delta's Bering River coalfields from deleterious development and monopolistic control by the Robber Barons of the day.

100 years later we recognize the wisdom of Roosevelt's conservation foresight—the health of fish and wildlife and their habitat on the Delta is essential to the health of Cordova's subsistence and commercial fishing economies. Indeed, Cordova—situated right between the Delta and the Sound—might not have survived the economic and ecological mayhem of the oil spill in the Sound

without a healthy Delta.

How can we further protect the Delta/Sound region? After public outcry the State of Alaska recently cancelled plans for Gulf of Alaska oil and gas leases in the Bering River/Controller Bay/Katalla region of the east Delta. And now we have the additional opportunity to retire the Bering River coalfields themselves and protect the Delta once and for all.

When the Exxon Valdez Oil Spill Trustee Council (EVOSTC) was created to oversee Exxon's \$900 million civil settlement, the Council was given the mandate to restore the environmental health of the oil spill region, and restoration was to be done on an ecosystem basis. But when geographic boundaries were created for the sake of restoration, they were not drawn on an ecosystem basis—the restoration boundary arbitrarily ran down one side of the Copper River, leaving the eastern half of the Delta ecosystem completely off the map.

To fulfill its original mandate to protect and restore the oil spill region, EVOSTC restoration boundaries must represent the ecosystems themselves:

Dear Trustee Council, please follow in Teddy Roosevelt's footsteps and extend boundaries to include the entire Delta/Sound bioregion, all the way east to the Bering River and Cape Suckling...and then retire those coalfields in the name of restoration. Or as they say in the healing arts, first do no more harm.

The remarkable Delta and Sound are two halves of a beating heart. Let's keep that heart beat healthy.

Thanks and blessings on your important work.

David Lynn Grimes
Cordova, Alaska

Kristina Guzman

We should do anything in our power to help preserve the natural state of resources provided in this area. Nature first.

Catherine Muhammad

I support Draft Resolution D. I support the extension of EVOS. Wildlife and Nature must be preserved at all cost.

Christian Deppeler

I support the extension of the restoration boundary.

Loren Weber

I support Draft Resolution D. I support the extension of EVOS. Nature and animals should be protected and saved.

Amy Barr

Do the right thing.

Jessica Kaniuka

Please extend the boundary and protect this beautiful and important aspect of our ecosystem. Do not let corporations ruin and rape the natural world for profit. We must care for our home in all of its forms if we expect to survive.

Jacqueline Skottki

Indigenous land is holy and should be kept away from any damage.

Indigenous land is a treasure for our descendants. In order for it to thrive we need to protect it.

This world needs their thriving and growing landscapes in order to fight the growing environmental changes which are a danger for animals and us.

Destroying any kind of environmental cycles through destruction of nature is harming us and especially those who are living close to it.

FRANCES PASAMBA

Please do not let another ecosystem and natural habitat be harmed by the actions that can be controlled. Care for the ecosystem, its inhabitants and humanity. This is highly critical for all of us to not only survive, but thrive.

Oliver McMillan

Dear EVOS Trustee Council,

My name is Oliver McMillan. I'm a concerned citizen of Aotearoa, New Zealand, and I believe we must protect the wild salmon ecosystems we still have left. I absolutely approve changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and irreplaceable.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

Thank you.

katherine mclaughlin

I fully support the extension of the EVOS Restoration Boundry to include the Copper River Delta, and the Martin/Bering River watersheds.

The Martin and Bering River watersheds which feed into the Copper River Delta are integral to the ecological (and economic) health and well being of the Prince William Sound Ecosystem.

Preservation of the largest intact wetlands on the planet will ensure the sustainability of the ecosystem as a whole, and will serve to benefit not only Alaska, but also the world.

Robbi Mixon

Dear EVOS Trustee Council,

My name is Robbi Mixon. I'm a concerned citizen of Homer, Alaska, and I believe we must protect the wild salmon ecosystems we still have left. I wholeheartedly approve changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

This area supports tremendous wildlife, including world class salmon runs and shorebird migration.

Thank you.

Lisa Docken

Draft Resolution D would support the highly innovative and cross-disciplinary approach we as scientists must utilize moving forward. Interconnected systems, disciplines and partnerships are the way of the future. Extending the spill boundary in an ecosystem approach is not only logical but also shows recognition by the Trustees that areas outside of the mouth of the Copper River (for example), become very vulnerable if areas JUST barely outside of the arbitrary spill zone become developed with extraction activities. Our marine damaged resources are making progress in recovery; why we would we jeopardize that because of an arbitrary spill zone? It's a proven approach for best practices and outcomes to consider how interconnected these systems are with marine currents, migration of animals and fish and ultimately the interconnected dependence we have on the watershed natural resources. Thanks for considering this highly innovative proposed resolution. Sincerely-Lisa Docken

Emily McDougall

Dear EVOS Trustee Council,

My name is Emily McDougall. I'm a concerned citizen of the Yukon Territory, and I believe we must protect the wild salmon ecosystems we still have left. I wholeheartedly approve changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

As a person of Tlingit ancestry, I am deeply compassionate about protecting the homelands of the Native Eyak and Tlingit Peoples now and for seven generations to come. We must protect the wild salmon, and the abundance of wilderness and wildlife that make Alaska so uniquely biodiverse. We must advocate for the protection of clean water and pristine ecosystems, for all those who depend on them.

Thank you.

Joan Steritz

I strongly support the extension of the Exxon Valdez Oil Spill (EVOS) Restoration Boundary and incorporating an ecosystem approach in its management and preservation. This unique land and waterway system are invaluable to the native peoples who call it home and those who want to enjoy its restorative and soothing beauty. There is no substitute for the benefit derived from immersing oneself in a truly pristine and wild place. The EVOS Trustee Council should have the authority and flexibility it needs to protect and manage this extraordinary habitat.

Tamara Klamner

Dear EVOS Trustee Council,

My name is Tamara Klamner. I'm a concerned citizen of the earth, currently living in Northern California. I strongly believe we must protect the wild salmon ecosystems that remain. I wholeheartedly approve changing the EVOS Restoration Boundary to incorporate an ecosystem approach. Please extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities and beyond.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness, an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

I spent some time in the Copper River Delta and the surrounding area and it had an immense impact on me. To experience real wilderness, untouched by man was incredibly powerful. It gave me hope that the planet may survive if we can preserve those sacred places that are left untouched. We owe it to the native people, the animals and the plants to protect this ecosystem, so it can live on for the rest of time. It is imperative to the health of the planet that we protect this ecosystem.

Thank you.

Tamara Klamner

Christine Den Adel

As a concerned citizen of our earth, I support Draft Resolution 20-D Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

The Delta/Sound ecosystem is a fragile one. The inter connected system between land and water is just that connected! If one is off balance the other is affected. The relationship between human well being and ecosystem services is not linear. We humans are fully dependent on Earth's ecosystems. The impact of a pipeline oil spill on the Cooper River Delta could have serious consequences to the marine ecosystem.

Please take serious consideration into protecting the Delta Sound ecosystem. I fully support Draft Resolution 20-D Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

Sincerely, Christine Den Adel

Karen Yoshitomi

Dear EVOS Trustee Council,

My name is Karen A. Yoshitomi. I'm a concerned citizen of Washington State and I believe we must protect the wild salmon ecosystems we still have left. I wholeheartedly approve changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

I have had the wonderful opportunity to raft the Copper River in 2001 and the trip highlighted and supports all the above reasons for changing the EVOS Restoration Boundary to include the entire ecosystem. Also inherent in the ecosystem are the people who live in the ecosystem. Native cultures, in particular, are inexorably tied to this ecosystem. The ecosystem, especially fish, are key to their way of life and must continue for centuries going forward as it has for the centuries past.

This part of our country keeps me coming back to enjoy its beauty and bountiful ecosystem.

Thank you.

Karen Button

I strongly support Resolution 20-D as written and look forward to its passage.

This is a resolution sought after for decades. I'm grateful the Council is at last considering expanding the original boundaries of the spill zone to include one of the richest ecological regions to connect with Prince William Sound. Thank you.

Western science has confirmed what those with traditional knowledge have known all along, that Prince William Sound migratory birds, fish and marine mammals depend on habitat much more vast than that of the current spill boundaries. The migration of these species link ecosystems together and show how the protection of seemingly disparate regions is protection for the species as a whole.

As someone who was born and raised in Southcentral Alaska and has spent an abundance of time in PWS and the Copper River Delta, I was devastated (as so many of us were, and still are) by the magnitude of loss caused by the spill. That loss was witnessed far beyond the spill zone and if we are to be true stewards, the Copper River Delta and adjacent ecosystems (which encompass the Bering River watershed and coalfields and Marin River watershed) must be included in the spill boundaries.

Resolution 20-D provides another layer of healing for species still recovering from the spill and for the Peoples whose survival is linked to the health of these species.

Thank you for the opportunity to comment.

Sincerely,

Karen Button
Spenard, Alaska

Laura Bowman

Dear EVOS Trustee Council,

My name is Laura Bowman. I'm a concerned resident of Cordova, Alaska, and I believe we must protect the wild salmon ecosystems we still have left. I wholeheartedly approve of changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I did not live in this area when the Exxon Oil Spill occurred, but I can tell you that the devastation caused by it is still alive in the memories of Cordova residents who did experience that dark day when "the waters died." I have heard the stories of schools of herring which used to thrive here before the Spill. The herring were a loss, and we don't want to lose the salmon as well.

Salmon conservation receives much attention because salmon are of utmost importance both in subsistence and commercial fisheries. Protecting their habitat, however, also protects a myriad of other beings, such as the shorebirds that Cordova is well-known for, and the eulachon (commonly referred to as "hooligan") that sustain many Cordova residents through the winter. Please extend the EVOS Restoration Boundary not just for the sake of protecting and preserving the salmon, but also the myriad of interconnected life-forms that have inhabited this region for millenia.

Thank you for your consideration,
Laura Bowman

Laura Alders

Dear EVOS Trustee Council,

My name is Laura Alders. I'm a concerned citizen of Marin County, California, and I believe we must protect the wild salmon ecosystems we still have left. I wholeheartedly approve changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

(Add some of your personal story - why you care about protecting the homelands of the Native Eyak and Tlingit People, the wild salmon, abundance of wilderness and wildlife, clean water, etc.)

Thank you.

Laura Alders

Martha Raynolds

I am writing in support of the Exxon Valdez Oil Spill Trustee Council's Resolution 20-D, which would allow the Council to consider actions to conserve areas outside of the immediate spill zone caused by the Exxon Valdez. An ecosystem approach is appropriate to conserve the resources of the Prince William Sound Area, as many animals travel through the Sound to surrounding areas. In addition, the quality of the water flowing into the Sound is directly affected by activities in those watersheds. Conservation of these surrounding areas will benefit the areas of Prince William Sound that were affected by the 1989 oil spill.

Sincerely,
Dr. Martha K Raynolds
Ecologist, UAF

Susan Pritzker

Protecting the people and the planet, should be our first and highest goal as stewards of this, our one and only planetary home.

Jordan Ebert

I support the extension of the Exxon Valdez Oil Spill (EVOS) restoration boundary, which would allow funds from the EVOS Trustee Council to be used to protect the Eastern Copper River Delta, the pristine homelands of the Eyak & Tlingit Nations. The extension of the Exxon Valdez Oil Spill (EVOS) restoration boundary would also keep coal from the Bering River Coalfields in the ground where it belongs, not causing further climate change by being extracted and burned.

Please preserve this region and prevent further harm to those who still suffer because of the 1989 spill. Any industrial accident on the Delta, from the Bering River in the east to Cordova in the west, would negatively impact the Sound.

Darby Finnegan

I would like to express my support of incorporating ecosystem-based restoration to repair the damages done by the Exxon Valdez Oil Spill. I am a fish biologist, and I have spent time in Prince William Sound and the Copper River Delta as a field technician for Prince William Sound Science Center (PWSSC) and as a recreational fisherman. I graduated from Western Washington University with a degree in marine biology, and I have been involved with a wide array of research projects, including eelgrass carbon sequestration, fish functional morphology and evolution, stomatopod biomechanics, and pink salmon hatchery-wild interactions.

While working for PWSSC, I have had the opportunity to engage with many Cordova community members, from biologists to commercial fishermen to wildlife photographers. These individuals maintain a deep connection to the surrounding land and water for their work, but like most Cordovans, they also rely on their surroundings for sustenance and enjoyment. Many remember the Valdez Oil Spill and the negative effects it had on their lives and the lives of the organisms upon which they depend. Although I am not a permanent resident of Prince William Sound (PWS), these conversations with community members, as well as my own personal experiences in the region, have given me a vested interest in the restoration and continued management of the ecosystems and organisms affected by the EVOS.

Research around the globe reveals that ecosystem-based restoration and management is the most effective way to recover threatened species and restore balance to damaged ecosystems. This Council has certainly observed positive effects of implementing ecosystem-based recovery strategies in past projects, but there are still species that have yet to recover from EVOS. There are also those species who are stable now but face further threats in PWS. People who live in the region know that the Copper River delta is an essential part of the marine and coastal ecosystems of PWS, and scientists agree with them. The spill zone area does not include the Copper River delta, and although this region was not directly impacted by oil, many of the organisms that rely on the delta were affected by the spill. By not including the Copper River delta in restoration efforts, a critical habitat influencing the long-term health of PWS would be ignored.

The Copper River releases large amounts of sediment and organic matter into PWS, which then fuels the production of phytoplankton. Phytoplankton feed zooplankton, and zooplankton serve as a major food source in PWS, with Pacific herring being a notable benefactor. Pacific herring have yet to recover from EVOS, and many scientists think that this could be the result of food limitations. Understanding the potential bottom-up effects being driven by such a large estuary could shed more light on how to increase Pacific herring biomass.

The Copper River Delta also provides important habitat for migrating species, including those belonging to salmon and shorebirds. Both groups migrate thousands of miles, using the marine environment in PWS and the estuarine environment of the Copper River delta. Ensuring the health and recovery of these species requires active restoration and protections of the Copper River delta, a habitat critical to their success. Habitat protection is one of the main goals of the EVOS Trustee Council, and the Copper River delta is one of the most critical habitats in PWS. A healthy Copper River will aid in the improved health of PWS. Lastly, this revision would allow for greater flexibility in restoration projects and allow funds to be used to reach the goals set by this council. By no longer being restricted to an arbitrary boundary of the spill zone, the ecosystems that critical PWS species rely on can be restored and protected for the betterment of the entire PWS region.

Alan Trist

November 25, 2002

Dear EVOS Trustee Council,

I'm a concerned citizen of Princeton, New Jersey, and a member of the Eyak Preservation Council's Advisory Board (EPC). I believe we must protect the wild salmon habitat we still have left. I wholeheartedly approve Resolution D, and changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

Please do extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. I am especially glad that the word "ecosystem" has been taken up by the EVOSTC; these areas were clearly and severely impacted by the oil spill, in addition to the Prince William Sound. Without an ecosystem approach, mitigation of habitat damage can only be partial and relatively ineffective.

Thriving, roadless watersheds like the Copper and the Bering are priceless for sustainable food economies and essential to coastal Alaskan communities. Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. These watersheds are still fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year on which the regional economy depends; the products are marketed worldwide.

I was personally fortunate to spend time with the EPC in Cordova, Alaska, where they are headquartered in the heart of the region. Learning the details of the situation from local commercial fishermen, some of whom are Native Eyak, opened my eyes to the broader picture in a way that no amount of second hand reporting or opinion could ever do. We should all be grateful to the model of careful enviro-commercial action that they represent.

Thank you,

Alan Trist

Eden Romeo

I am writing to you to express support for the extension of the EXXON Valdez Oil Spill restoration boundary, as well as the incorporation of an ecosystem approach. The Eastern Copper River Delta must also be protected due to its ecological and cultural significance, and coal from the Bering River Coalfields must remain in the ground.

I therefore urge you to please protect those who are still suffering from the 1989 spill, and ensure that no more industrial harm comes to this region.

Regards,
Eden

Adam Greenberg

Please extend the EVOS restoration boundary to incorporate an ecosystem approach—for the safety of people and planet

Julia York

I am writing in support of this amendment. As a biologist, it makes ecological sense to use an ecosystem approach to designate boundaries for the oil spill funding. We must recognize that all of these areas are connected, and move to a wider area for restoration and impact assessment. Further, we must keep coal in the ground, preserve this region, and prevent further harm to those who still suffer because of the 1989 spill. Any industrial accident on the Delta, from the Bering River in the east to Cordova in the west, would negatively impact the Sound. Thank you for your consideration of this comment.

Ellen Americus

Dear EVOS Trustee Council,

I am a concerned resident of Cordova, Alaska. I am asking you to vote to approve changing the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields.

You have the opportunity to leave a legacy to future generations by taking an ecosystem approach in protecting this immense, priceless, pristine, roadless, coastal ecosystem, the largest and only one left of its kind on the planet.

The interconnected Copper and Bering River ecosystems form a vast contiguous wilderness, an immense wildlife corridor. These watersheds must be kept intact to support the returns of thousands of spawning salmon each year.

I suggest that protecting this irreplaceable wilderness is the most appropriate use of oil spill funds.

Your action to protect this important habitat will protect fishing livelihoods, climate, wildlife, and leave something for our grandchildren's future.

Thank you so much.
Ellen Americus

Kristopher Ranney

Dear EVOS Trustee Council,

My name is Kris Ranney. I'm a concerned citizen of Cordova Alaska, and I believe we must protect the wild salmon ecosystems we still have left. I wholeheartedly approve changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

I have lived and worked in the area in question my entire life. My family operated a sports fishing business just west of the Bering. It is a spectacular place. Salmon by the tens and hundreds of thousands go into the river systems encompassed by this ecosystem. Wildlife like you can't even imagine feed off of them, or benefit from the nutrients they bring with them from the sea.

Sixty miles to the west, in Prince William Sound, there is noticeably less biodiversity. The herring are small and innumerable, mega predators are a rare sight, salmon runs have to be propped up with hatcheries. More than 30 years after the oil spill the ecosystem still hasn't fully recovered. Now, I'm not a biologist, and I can't tell you how much that has to do with residual effects of the spill, and how much has to do with increased human activity in the area and the differences in geography, but the difference is stark if you're looking out for it, and the spill certainly contributed greatly. If the winds had blown the spill east, rather than west, I don't think that line would be as noticeable.

Thank you.

Chuck SHAW

Stop the greedy insanity. We can not sustain the continual, and unfettered assault on the planet and its remaining Edens, already suffering from CO2 overload.

Katherine du Plessis

I support the Exxon Valdez Oil Spill (EVOS) restoration boundary to incorporate an ecosystem approach. Extending this boundary would allow funds from the EVOS Trustee Council to be used to protect the Eastern Copper River Delta, the pristine homelands of the Eyak & Tlingit Nations. Within this culturally and ecologically critical region lies the Bering River Coalfields.

Dear Trustee Council, please keep the coal in the ground. Please preserve this region and prevent further harm to those who still suffer because of the 1989 spill. Any industrial accident on the Delta, from the Bering River in the east to Cordova in the west, would negatively impact the Sound.

I come from a place that is a proposed superfund (it will never be a superfund because it's just too expensive to restore the land). We are not allowed to swim, we are not allowed to eat the fish from the water. People of all walks of life suffer from cancer and other ailments caused by this pollution. No companies are paying reparations. Please let's protect Alaska while we still stand a chance. Salmon over coal, Salmon over oil.

Michael Queen

Please see my uploaded file.

November 27, 2020

Dear EVOS Trustee Council,

My name is Michael S. Queen. I am a concerned, lifelong citizen of Alaska, and I believe we must protect the wild salmon ecosystems we still have left. I approve Resolution 20-D, and I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

Born in Juneau in the mid-1950s, economic circumstances dictated my entire childhood that we harvest wild fish and game to sustain our family during the winter months. For my twin brother and I, our 'summer vacation' did not start until we had caught enough salmon in local streams and rivers to fill our freezer.

Moose and caribou hunting were also necessary to augment the diets of five growing children and the hardworking, but working poor parents, that struggled to raise and shelter them.

Working as a deckhand in my later teen years, commercial salmon fishing was crucial to my being able to finance my college education.

Even today, my sweetheart and I live in a very rural area of Prince of Wales Island, near Kasaan. We rely on subsistence fish and game and will rely even more so upon them once I retire from State service in a handful of years. In Kasaan Bay,

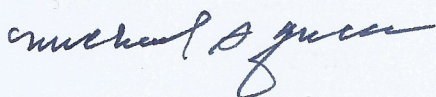

our shellfish resources are tainted by toxic effluent that continues to belch from deserted mines nearby. Added to the red tides that are now frequent, human-induced climate change and generations of pollution from resource extraction rob us and our communities here of healthy and sustaining foodstuffs.

My father, a Wisconsin farmer's son of mixed Caucasian and Ojibway heritage, instilled in me a consciousness of conservatorship of the resources the land and waters provide. That direct link between physical survival and those resources remains unbroken. It is a consciousness that I have tried to pass on to my own children.

It seems to me that society these days is hell-bent on cutting, extracting, leveling, paving, and 'developing' everything in sight with no attempt at the generations-long perspective of conservatorship of our survival resources... those same resources that have nourished and sustained my family and the families of my neighbors.

Only by our decisions in this day can we safeguard watersheds, bioregions, and entire ecosystems to ensure that those who follow us are able to reap the same bountiful harvests we have enjoyed and relied upon, and so live and thrive. Please extend the EVOS Restoration Boundary to incorporate an ecosystem approach.

Thank you.

A handwritten signature in dark ink, appearing to read "Michael J. Quinn". The signature is fluid and cursive, with a large, stylized 'Q' at the end.

PO Box 19470

Thorne Bay, Alaska 99919

Marcelo Nasif

Dear EVOS Trustee Council,

We believe we must protect the wild salmon ecosystems we still have left. We approve Resolution 20-D, and we wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach.

We ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery.

Thank you.

Dr. & Mrs. Marcelo Nasif

Jodi Gustafson

Please read my attached letter. Thank you for reviewing this.

November 29, 2020

Dear EVOS Trustee Council,

My name is Jodi Gustafson and I'm a concerned citizen of the Yukon Territory, and a deep lover of the beauty and uniqueness of your unique Alaskan region. I approve Resolution 20-D, and I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. This action really goes beyond an ecosystem approach as it is phrased - it is a responsible human approach, and I thank you deeply for moving towards it.

For my children, your children, and all of the other beings we share this planet with, I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are incredibly rare the world over.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wildlife corridor - a corridor that is becoming increasingly rare on our planet. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. These salmon are the engine behind the entire ecosystem. Several people the world over hold deep respect and awe for the Eastern Copper River Delta. Salmon from this region are admired and sought after globally.

Protecting this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans on Earth at this time of ecological devastation to protect the wild salmon ecosystems we still have left. As a conservationist having travelled to several sites around the world, I want to stress the uniqueness of what you have in your region. Growing up in the Yukon, where our Yukon River salmon populations have dwindled to a frightening degree, traveling to Valdez to fish salmon each year made for some of my best childhood memories. My time salmon fishing out on the waters in the EVOS zone instilled some of my deepest affection for the natural world and deeply influenced my entire career path. While studying at the David

Attenborough Building at the University of Cambridge, when I had the opportunity to meet with Sir David, our conversation immediately went to Alaskan salmon and the importance of their protection as keepers of Alaskan ecosystems and culture.

You have the opportunity to do something incredibly powerful and meaningful here that the world would applaud Alaska's leadership for, in extending this restoration boundary to include the incredibly unique Eastern Copper River Delta.

In the spirit and intent of reconciliation with the Eyak and Tlingit caretakers of this region, and in the nature of being responsible humans at this transformative time on Earth, I trust you will make the right decision, and thank you deeply for it.

Warmly,

Jodi Gustafson

Rob Hoffman

First, let me address how I have an interest in the matter, given my location. I have taken two fly fishing excursions to nearby Orca Bay chartered out of Cordova, AK. The second trip was attended by my father, who in his 60's learned to fly fish for the first time. As the saying goes, he was hooked and we couldn't get him out of the water.

I now have a two-year-old son, and already my Dad is talking about taking him fishing in Alaska to share the up close encounters with Bald Eagles, Grizzly Bears, wild Orcas, and Otters with their pups. Not to mention the great fishing.

I live on the coast of Maine, where interactions similar in nature are plentiful. But there is nothing like Wild Alaska. And a lot of it has to do with the preservation and protection of Alaska's ecosystem.

Exxon-Valdez was an unfortunate event in Alaska's history, and the only way to mitigate the lasting impact of this man-made disaster by doing everything available to us to restore the ecosystem in and around the spill.

There is a two-year-old boy on the other side of the continent who is counting on you.

Mariah Parker

My name is Mariah Parker and I am a concerned citizen from Sonoma County, California. I have family in Alaska, and through my visits with them, as well as my work with the non-profit group Eyak Preservation Council, I have had the opportunity to spend time in the beautiful Copper River Delta region.

I wholeheartedly support Resolution 20-D and its amendment of the 1994 Restoration plan to incorporate an ecosystem approach to the oil spill boundary. Protecting this ecosystem as a whole by extending the boundary to include the entire Eastern Copper River Delta and the Bering River Coalfields will help our precious endangered wildlife and salmon to recover from the decades-long impact of the oil spill. We must do all we can to mitigate the damage and protect this critical habitat for ecological sustainability.

Thank you so much for your consideration for this visionary approach!

Mariah Parker

Ted Roosevelt

It is a privilege to be able to submit comments to the EVOS PAC and Trustee Council even though I do not live in Alaska. Some of my most treasured moments in the out-of doors occurred in Alaska. I strongly support Resolution D with the inclusion of the Copper River Delta and the Bering Coalfields. For the past four decades I have spent a significant amount of time in Asia, mostly Japan, South Korea, India and China. Sad to say all these Asian countries are building large coal fired electric generators particularly China and India. Consequently, their usage of imported coal is rapidly increasing. As stewards for our natural resources we have a compelling obligation to ensure that they remain protected and undeveloped. This is a moral responsibility to our grandchildren and their children to protect for all time these incredible natural resources that would be protected by Resolution D

Sean Den Adel

Dear EVOS Trustee Council,

As a concerned Cordova resident and scientist, I strongly support Resolution 20-D. Amending the 1994 Restoration Plan to include the Copper River and Bering River would be a monumental step forward towards restoring the natural resources and natural resource services lost or injured as a result of the oil spill.

Using an ecosystem-based approach in the Restoration Plan would be logical due to the mobility and fluid nature of wildlife and nutrient exchange between the Copper River delta and Prince William Sound.

Thank you for the opportunity to comment. Please approve Resolution 20-D.

Sean Den Adel
ADFG - Cordova
Fish and Wildlife Technician II

Ellen Americus

(Addendum to previous comment)

Dear EVOS Trustee Council,

I approve Draft Resolution 20-D, to change the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta Region including the Bering River Coalfields.

I hope you see this opportunity to leave a legacy for future generations and vote in favor of Draft Resolution 20-D.

Thank you very much,
Ellen Americus

Karen Baker

I support the extension of the Exxon Valdez Oil Spill (EVOS) restoration boundary to incorporate an ecosystem approach. It is important that we continue to protect these important people and lands.

Claire Delbecq

I approve of resolution 20-D and believe it will benefit Alaskan communities and the land they live on.

Julia Luger

I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council.

Douglas Grann

I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I have fished the Copper River Delta and have seen it's beauty and wonder. Including the entirety of the Copper River Delta in the spill area boundary will help the conservation of both Prince William Sound and the Copper River Delta. I support adoption of Resolution 20-D

Nicholas Rosas

I approve of resolution 20-D. I feel that it is important to encourage the EVOS trustee council to incorporate an ecosystem approach and include the Copper River Delta for future restoration. This area is culturally and ecologically imperative to the Eyak and Tlingit Nations.

Shae Bowman

I approve of this resolution and I think it will be very beneficial for this region! Thank you

James Ianni

I approve of this resolution and I think it will be very beneficial for this region! Thank you

Skyler Lewis

I approve this resolution and think it would be highly beneficial to the wildlife in this region.

Rio Led

I approve Resolution 20-D, the extension of the Exxon Valdez Oil spill (EVOS) restoration boundary.

Include the beloved Copper River Delta for future restoration and preservation! This is a culturally and ecologically critical wilderness, representing one of the largest intact wetlands on the planet.

Brennen Jones

I support the importance of preserving the wildlife that will be greatly impacted if not decimated by the construction of Pebble mine. This wilderness is absolutely vital to the sustainability of planet earth and her peoples.

ALASKA EARTH SCIENCES, INC.

December 2, 2020

EVOS Trustee Council
4230 University Drive, Ste 220
Anchorage, AK 99508-4650

Dear EVOS Trustee Council Members,

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the "New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill" proposal submitted by the EVOS Think Tank of Citizens.

Alaska Earth Sciences, Inc. (AES) is a geologic consulting company based in Anchorage with many years of experience in mineral and energy exploration and in construction applications within the Prince William Sound area. We were a young company when the Exxon Valdez hit Bligh Reef. I was a young man when the first human landed on the moon and at that time my family and I were anchored up in Eshamy Bay. Since its inception AES has worked with both regional and village Native Alaska Corporations. Our appreciation for the Prince William Sound environment and the residents that live there has therefore been deep and rewarding.

AES understands that the following four draft resolutions, if approved, would continue current "spend down" efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council:

1. Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules;
2. Draft Resolution 20-B: Change to procedures for approval of multi-year projects;
3. Draft Resolution 20-C: Combining habitat and research sub-accounts; and
4. Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

AES is writing in support of the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Chugach Region communities, including those represented by this letter, were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources, the effects of lingering oil and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

11401 Olive Lane, Anchorage, Alaska 99515
Phone: (907) 522-4664 Fax: (907) 349-3557

Specifically, we believe that the above resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Thank you for your consideration.

Sincerely

Linda Leary

Michael Meade

I am calling for the implementation of Draft Resolution D so as to protect the cultural and ecological resources of the land and waters of Tlingit People.

Kendra Wiese

I would love to encourage approving the Draft Resolution 20-D, which would extend the Exxon Valdez Oil Spill Restoration Boundary to include both the Delta & the Sound. This ecosystem approach is long overdue & will give all Cordova fishermen, businesses & organizations a better chance at success.

Andy Schulz

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Maxine Goodyear

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Everett Reynolds

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Dan Bulmer

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Michael Meyers

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D. It took thousands of years to create but only a few years to destroy.

Gregg Patterson

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D. Obviously, it is important to protect this area from coal mining. This is a no-brainer.

David Stevenson

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Robert Leibold

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Daniel Wheeler

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

The views expressed are my own and do not represent the State of Alaska.

I support Draft Resolution D.

I support the Exxon Valdez Oil Spill (EVOS) restoration boundary to incorporate an ecosystem approach. Extending this boundary would allow funds from the EVOS Trustee Council to be used to protect the Eastern Copper River Delta that was excluded from the spill zone boundary.

The Draft Resolution D states, “The available science has consistently pointed to a broader ecological footprint attributable to the spill than is represented by the currently defined spill area.” Please incorporate areas within the Gulf of Alaska that are not within the spill zone boundary.

Will Frost, Habitat Biologist
ADF&F, Habitat Section (ret.)

Esther Smith

Dear EVOS Trustee Council,

I am writing to urge you to approve Resolution 20-D and to extend the Exxon Valdez Oil Spill (EVOS) Restoration Boundary. Extending this boundary would allow crucial funds from your council to be used to protect the Eastern Copper River Delta within the pristine homelands of the Eyak and Tlingit Nations. This is a culturally and ecologically critical wilderness, representing one of the largest intact wetlands on the planet. Your support for the boundary extension helps assure its protection.

Sincerely,
Esther

Dru Sorenson

Please support Draft Resolution 20-D. Amend the 1994 restoration plan to include and use an ecosystem approach to the oil spill boundary. So much land, birds, game, ocean, and lively hoods have been destroyed in the whole country due to inadequate oil spill planning. Ecosystems are fragile and must include large areas to protect our world. Oil spills are frequent in the country ..and Alaska. Please take this action. Thank you.

Pat Conzemius

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Dennis Gautreau

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D. If the coal will primarily be for export, then we are risking our environment to help other countries who are not taking the same risk. We need to move away from fossil fuels and try to better protect this natural national resource.

Marven Konzelman

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Sarah Watt

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Jody Spradlin

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Skye Donaldson

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Renata Schepis

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Carolyn Beran

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Darla Hill

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Daniel Wheeler

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Tim Lawson

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Randall Gray

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Kymberly Miller

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D. Our watersheds are the value of Alaska - keep them safe!

Peter Van Tuyn

I write in support of Resolution 20-D. Expanding the EVOS spill boundary to the east will allow the Trustee Council to target restoration projects to resources that were impacted by the oil spill but that do not spend their entire life cycle within the current boundary. As spelled out in the resolution: The available science has consistently pointed to a broader ecological footprint attributable to the spill than is represented by the currently defined spill area. For example, the Alaska Department of Fish and Game has shown red salmon in Prince William Sound are derived from natal streams as far away as the Copper and Bering Rivers, and many of the 90 species of sea birds that were injured by the spill move significant distances (i.e., well outside the designated spill area) throughout the year, especially during the reproductive season.

Salmon are a particularly apt example of the need for the resolution, given their migratory nature and the challenging state of salmon resources in and offshore of Alaska, including in Prince William Sound and the Copper River Delta/Bering River area.

Thank you for the opportunity to comment on this important issue.

Xiu Yuang Lu

Approval of Draft Resolution 20-D and protection Copper River Delta and Bering River Coalfields is needed and of utmost importance as our reality is an ongoing destruction of our planet. Our habitat should be protected!

Cassidy DiRutigliano

We must learn and listen to the sovereign people of this land, and protect the delicate and vulnerable ecosystems from future disaster.

Phillip Blanchett

EVOS Trustee Council

RE: Yes to Ecosystem Approach on Resolution 20-D

December 7, 2020

To Whom It May Concern:

The Copper River Delta ecosystem needs your protection. I support extending the boundary of the oil spill restoration zone to include the Copper River Delta and the Bering River Coalfields region.

The Exxon Valdez Oil Spill Trustee Council (EVOSTIC) can protect the Gulf of Alaska and the inextricable relationship between Prince William Sound and the Cooper River Delta/Bering River Coalfields. This ecosystem should be protected with a holistic approach.

EVOSTC, please exercise your power to protect Alaska from devastating oil spills and the lasting traumas they inflict. As we know from the 1989 tragedy, Prince William Sound wasn't the only area to be harmed. Please approve Resolution 20-D for the health of our culture and habitat.

Thank you for your service and allowing an opportunity to show community support.

Sincerely,
Phillip Blanchett

I am writing to show my support of extending the Exxon Valdez Oil Spill Restoration Boundary to include the entire Copper River Delta

Sarah Laird

Please protect some of the only wild life we have left. It is our collective moral obligation to try and preserve what we have and ensure further generation's prosperity. We are in a climate crisis and this is a small drop in the bucket but it's impact is significant.

Dylan Haile

We must protect more of the land and the ocean

Erin Ranney

Dear EVOS Council

My name is Erin Ranney. I have worked in Cordova over the years and most of my family lives and works in Cordova.

The Copper River Delta is a vitally important ecosystem that neighbors Prince William Sound. And with all water, it is connected. The health of the Copper River Delta and the health of Prince William Sound are not separate entities and should not be treated as such. The wildlife or water does not know the boundaries that have been set. The protections should be extended, and by protecting both you are ensuring a healthy future for generations of people and the land they call home.

Healthy wild salmon ecosystems are rare. This watershed provide habitat for impacted fish and wildlife from the oil spill region. By protecting it, you are ensuring that the thousands of salmon that travel from the fresh water ecosystems to salt water ecosystems and back, can remain healthy- which not only benefits the wildlife but the community as well.

The oil spill impacts are still being felt after 30 years. Populations of wildlife have not yet recovered and the balance has not yet been restored. By protecting these areas you are limiting additional pressures that could stop forward progress on recovery. So, I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields.

Thank you,
Erin

Victoria Maximov

The preservation and caretaking of our many ecosystems in North America is essential. Since we have the available information and resources to better the ecosystem affected by the oil spill, it is essential that this is done properly by addressing the ecosystems that were most affected first. In order to ensure thriving ecosystems for many years to come.

Jeff Perlman

I would like to comment my approval of resolution 20-D and would like to see the Copper River Delta permanently protected. Thank you.

Robin Liepman

Water is life. The water in Alaska flows south to all of the Americas. It's a delicate habitat for the salmon which are integral to the local and indigenous culture and way of life. The Water keeps the ecosystem healthy and thus keeps the world healthy. To save the world we must protect the water by all means and at all costs. Our future and the future generations need us to value ecosystem health over profit. Period.

Mckenna Hunt

Keil ti' yóo xát duwasáakw

Ch'aak áyá xát

Galyáx kaagwaantaan naax xát sitee

I am a lingít descendant of the galyáx kaagwaantaan of Yakutat, Alaska and support the approval of draft resolution 20-D.

Indigenous stewardship has and always will be the way to environmental restoration and balance. It is high time that Native people are given the approval to take care of their lands and waters the way we have for millennia.

Aj Abell

resolution D is so crucial, we need to protect these lands and support indigenous people.

JOHN STERITZ

Dear EVOS Trustee Council,

My name is John Steritz. I'm a concerned citizen of Michigan, and I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

As a retired geoscientist who spent a career with Exxon and was a relative new hire at the time of the spill, the tragedy of this event has a lasting impact on me as well as the affected area. I understand that the local herring population has yet to recover, and that the local orcas have failed to reproduce since the time of the spill. I have also learned that the size of the spill in terms of gallons, is likely far larger than the reported minimal estimate of about 11 million gallons, and may be as much as 30 million gallons based on the amount of seawater that filled the hold after the tanker ruptured (the volume of offloaded liquids minus original load, doesn't directly imply the volume of oil lost, because of all the seawater that mixed in). This disaster has a lasting impact beyond the limits of the original boundaries set forth. By expanding the limits to a ecosystem compatible scale, we can further protect the health and natural restorative effects towards the recovery of this critical piece of our global ecosystem.

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,

John Steritz, ExxonMobil retired geoscientist.

Ayla Nereo

I am in full support of Resolution 20-D, approving the extension of the Restoration Boundary. Nothing can be more important than protecting our precious ecosystems. No money, no oil, nothing is more important than preserving and protecting the delicate balance of life on this planet. This is all we have.
Thank you for listening.

Norman Campbell

I agree the ecological footprint should be enlarged.

Kaelyn Schenkenberger

Very often too little is done both before and after oil and gas spills. I believe this resolution and ones like it can help remedy such issues and aid in the protection and preservation of land, animals, and fish.

Mei Mei Evans

I recommend adoption of Resolution D as I prefer to have government trustees continue to determine and conduct restoration. Thank you.

Mei Mei Evans

Varya Fedorova

Please pass draft resolution D. The scientific research performed in this environment, as well as specifically on boundaries themselves distinctly shows BOTH being more vulnerable to (mis)management, human activity, and the effects of climate change. This points towards the obvious move towards additional, expanded protection.

Additionally, I strongly believe in giving more voice to the native populations that exist and inhabit the land, and this draft is doing just that. With their traditional ecological knowledge, they are arguably the best stewards of their land. By saying that I am not discounting the work that western scientists have done, simply saying that both should be considered in tandem. with their traditional ecological knowledge, they are arguably the best stewards of their land. By saying that I am not discounting the work that western scientists have done, simply saying that both should be considered in tandem.

We cannot keep relying on a boom and bust extractive industry. The habitat loss that has been happening the last few decades is impetus enough to bolster our land protection and preservation, and manage from an ecosystem approach.

Cara Allison

There has never been such a potent time needed to take immediate action in restoration of wild lands and our planet. We cannot simply sustain our current pollution situations, we must begin to reverse them as best as we can. Please extend this territory of restoration.

Nathaniel Wilder

Dear EVOS Trustee Council,

My name is Nathaniel Wilder, and I'm a lifelong Alaskan who has enjoyed harvesting salmon from the Copper River and recreating in the PWS since I was a child. I approve Resolution 20-D.

I'm asking that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields.

In addition to the value of our roadless areas throughout the state, a potential coal development at this point in history is a backward step. Coal is no longer a necessary resource. It is also a damaging resource and we cannot put at risk (for a second time) a body of water that is still healing from the last man-made destructive disaster. Coal mines can lead to water pollution and therefore habitat destruction.

We must protect the wild salmon ecosystems we still have left. As you know, the Copper River and Bering River deltas are cradles for some of the most important salmon runs in the state.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. As humans, it is our responsibility to protect the wild salmon ecosystems we still have left.

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,
Nathaniel Wilder

Ashley Taylor

I support the extension of the EVOS Restoration Boundary to include the entire Copper River Delta. We need to protect this pristine and unique habitat. This is a ecologically and culturally significant region unlike anywhere else on the planet. It is one of the largest intact wetlands left and must continue to be protected and preserved for the health of future generations(both people and wildlife).

Violet Yeaton

Stop the Spending! The communities of the impacted areas of the oil spill have not benefited from the purpose of these funds. Violet Yeaton

Stephen Matter

For the good of our planet, please extend the oil spill restoration boundary.

Tatum Berry

I support Resolution 20D. I support the protection and regeneration of the planet.

Daniel Dick

Please extend the resolution to protect the Copper River Delta and Prince William sound, it is vital to the continued recovery from the exxon valdez oil spill and to protect the way of life for all who reside there

Cougar Smith

Dear EVOS Trustee Council,

My name is Cougar Smith. I'm a concerned citizen of Keene Valley, NY and I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,
Cougar Smith

Nancy Hernandez

I was able to visit the Copper River on a lifechanging 8 day rafting trip and learned the word "pristine" about 20 years ago.

As a kid raised in the city, that experience in nature taught me a lifelong respect for the earth and an understanding of Alaska's role in the planet's balance.

I am writing to advocate for the approval of the proposed amendment to the 1994 resoration plan to include the Copper River. And to pledge my alleyship to the preservation and recovery of Alaskan Wilderness.

Jasmine Boyle

Dear EVOS Trustee Council,

I'm a concerned Alaskan who wholeheartedly approves of Resolution 20-D. I moved to Alaska years ago because of our tremendous natural resources and our thoughtful stewardship of these resources as we balance the needs of our economy. Fishing is part of being Alaskan. Protecting our pristine wilderness for our citizens, reliant industries, hunters/fisherman and tourist guests is part of our responsibility to future generations.

I support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. Alaska needs to extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities. The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,
Jasmine Boyle

Mela Salinas

Please approved resolution D to protect our precious wild life. I beg of you to protect that which cannot protect itself - the animals, the fish. All are vital to our ecosytem. Incorporate an ecosystem approach to the oil spill boundary, please.

MaJo Montijo

I support the 20 D resolution and may all the region be protected and restored.

Dakota Altman

I support the approval of Resolution 20-D & your desire for the Copper River Delta & Bering River Coalfields to be permanently protected

Keri Oberly

I demand approval of Resolution 20-D to extend the Exxon Valdez Oil Spill Restoration Boundary!

Scott Heidebrink

Dear EVOS Trustee Council,

My name is Scott Heidebrink. I'm a citizen of Montana and I approve the Resolution 20-D.

I fully support changing the restoration boundary to incorporate an ecosystem approach. I would like to see the boundary include the entire Copper River Delta region. Areas like this are priceless and essential to Alaska and the world.

Wildernesses as vast, intact and with large numbers of wildlife as this are rare in today's world and should be protected for the people of Alaska and the world. The salmon runs of this region are some of the best in the world and support vibrant recreational and fishing economies and will be valuable for generations to come.

All the migratory fish that use this region and their habitat should be protected. It is our responsibility to right the wrongs of the past and to protect the last of these intact ecosystems.

Please approve Resolution 20-D.

Thanks,

Scott Heidebrink

Jane KientZy

I support Draft Reaolution D

Rachel Heath Heath

Please conserve the Bering River watershed. Natural resources are Alaska's greatest resource and we must protect them above all else.

Max Henkels

I am submitting my support for Resolution 20-D. The ecological impact of the Exxon Valdez Spill has stretched beyond the defined restoration area and a broader, ecosystem-wide approach must be adopted to address the damage. The Copper River Delta & Bering River Coalfields must be permanently protected.

Darlene Rodriguez

Council, please protect oil spill boundary. Approve Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

Kelly Vittengl

I am writing to plead that the funds from the Trustee Council be approved to protect and preserve the Berring River Coal Fields. Our planet is swiftly dying and we must protect what we can, especially our most vulnerable and (still) wild areas. Thank you.

Magdalena Sowinska

I would like to share my support and hope that the resolution to the oil spillage will take place as its very important that we take care of our environment. Fingers crossed for you guys

kamea chayne

I'm writing in support and approval of Resolution 20-D and the permanent protection Copper River Delta and Bering River Coalfields. Thank you.

Bill Black

Expansion of the EVOS Restoration Area to include all areas of ADFG Area E plus the Bering River terrestrial area is highly appropriate and needed. This expansion would include area which is not only highly productive in a wide variety of ways but is also upstream from Prince William Sound proper.

Chelsea Keena

Please protect this land and in doing so, the livelihood of thousands of Alaskans. Don't let hundreds more otters and millions of salmon eggs be choked in an oil spill in this region ever again.

Peter Mjos, MD

As a fifty year user and observer of Prince William Sound, the Copper River Basin, the entire Kenai Peninsula and Cook Inlet, Kodiak island, and the Alaska Peninsula, I and my family have a keen interest in the health of the entire Oil Spill Impact Area, and beyond that the critical role this entire ecosystem plays in the effort to control and mitigate the ever increasing impacts of Climate Change on not only Alaska but our entire planet.

Draft Resolution D proposes an amendment to the 1994 Restoration Plan that would eliminate the strict criteria for "outside the spill zone restoration actions". Beyond that, I would strongly endorse not only restoration but also acquisitions outside the spill zone, again in full consideration of our ability to limit climate change.

I completely agree with the expanded concept that an entire ecosystem is critical to an understanding of the oil spill impacts and restoration and recovery. To that end, the notion that restoration for injured populations outside the spill area, and the need for research monitoring outside the spill area, "will be significant for restoration and understanding injuries within the spill area".

Moreover, Draft Resolution D Provides opportunities for public comment and necessary transparency which Alternatives A, B, and C simply do not.

Draft Resolution D quite simply honors (and expands) the original intents of the oil spill Trustees in the wake of the Exxon Valdez horror.

Thank you.

Sincerely yours,
Peter Mjos, MD
Anchorage

Deron Thompson

I stand with the Native Conservancy and many other indigenous and colonial organizations, communities and individuals in urging the adoption of Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary. Thank you for your consideration on this matter.

Mary Martin

Hello,

My name is Mary Catharine Martin. I'm a resident of Douglas, Alaska, and am writing to support Resolution 20-D — extending the boundary to an ecosystem-wide approach that includes the Copper River Delta, including the Bering River Coalfields. It makes sense to use an ecosystem-wide approach.

Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Thank you for considering this and, hopefully, for moving resolution 20-D forward!

Mary Catharine

Alexandra Moldovan

Please support Resolution 20-D

Wendy Ranney

Dear EVOS Trustee Council;

I would like to express my appreciation and support to the Exxon Valdez Oil Spill Trustee Council for offering Trustee Council Resolution 20-D for public Support.

I strongly recommend that Resolution 20-D be adopted.

As a landowner in the Katalla River Valley, my family and I take our stewardship of these ecosystems very seriously. Because we frequent the Katalla and Bering River Valleys often, we can see first-hand the cultural and ecological connections and impacts that this area has with the Cordova Community.

The Exxon disaster has affected Ecosystems beyond the original established boundaries and it is irresponsible to draw a proverbial line in the sand and say that areas outside of this line are not all interconnected. Impacted wildlife populations are still visible some 30 years after this horrific event.

The original boundaries were set to include "the maximum extent of oiled shorelines, the severely affected communities and their immediate human use area, and the adjacent uplands to the watershed divide." You cannot consider the community of Cordova (who was drastically impacted) without considering the Copper River and Bering River basins.

I strongly feel that adopting an ecosystem approach for funding restoration projects is the best approach moving forward. As the Resolution states, "The available science has consistently pointed to a broader ecological footprint attributable to the spill than is represented by the currently defined spill area."

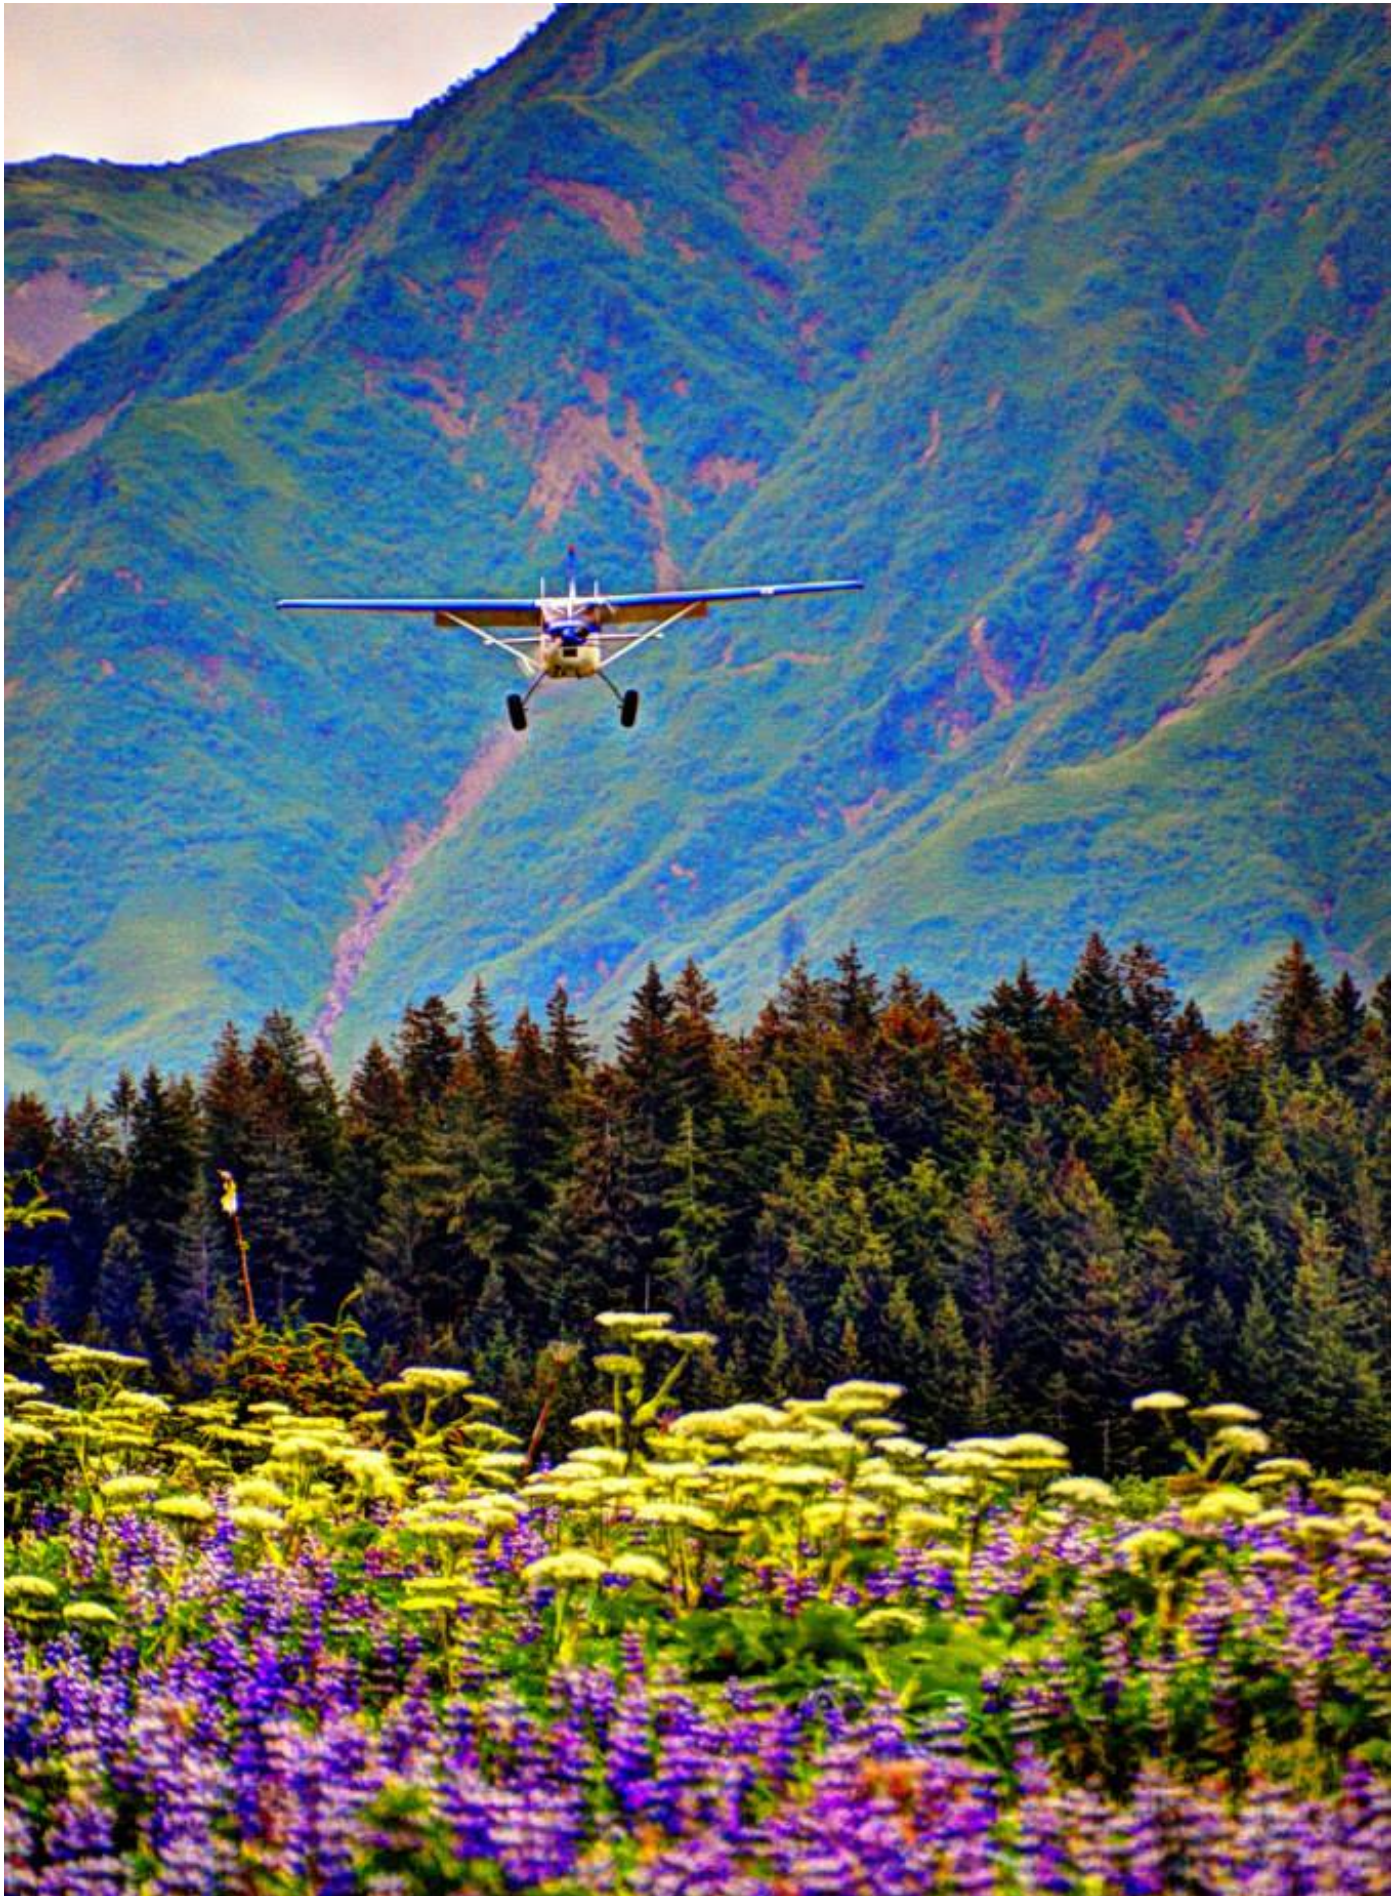

Habitat Protection and or enhancements of the Copper River & Bering River Basins are essential to the re-vitalization of still impacted Herring Biomass which directly influence the Salmon populations in the currently marked "effected" areas. Nutrient exchanges through the gulf stream storms and wildlife fluidity are not recognized in the original boundaries defined by the Council. A ruled line through the Gulf of Alaska does not allow for the movements of migratory animals that were impacted by the spill.

Adopting Resolution 20-D is an easy way for us all to be Stewards of this environment and take responsibility to protect and preserve this pristine wilderness.

Revising the criteria for projects outside the oil spill zone does not take away any of the power of the council. If anything, it shows the willingness to use the science, with an ecosystem approach to fund projects with a true focus on recovering populations while sustaining other recovered populations, and leaving a sustainable legacy for future generations. It is our responsibility to clean this up and leave only pristine wilderness.

Once again, I thank you for giving me an opportunity to comment on this resolution.

Sincerely,
Wendy A Ranney

Thetus Smith

Please do approve Draft Resolution 20-D because it "... would adopt an ecosystem approach for funding restoration projects," rather than the current and arbitrary oil-spill-zone approach.

Manasseh McPike

My name is Manasseh McPike. I live in Hutchison, Kansas. Please, approve the extension of the Restoration Boundary to include the entire Copper River delta. There is no amount of oil that is worth poisoning of waters and causing untold and irreversable damage to the environment and its non-human occupants for generations to come. Extending and approving the Restoration Boundary to include the entire Copper River delta is of vital importance to not all forms of life on our planet everywhere. What is done in Alaska effects Patagonia, the Gulf Stream current, and all else.

Mni Wiconi,
Manasseh Elihu McPike

Jill Ochalek Halco

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Richard Allen

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Dale Roth

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Paul Olinski

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Maxine Goodyear

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Bill Corey

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Francesca Gagliano

I am a soon-to-be 36 year old white woman with ancestral roots in Ireland & Italy. All sides of my family work or worked with the land and its life as farmers ♦ whether they raised cattle, pig, or tended to olive and lemon groves ♦ or were cobblers who sewed shoes in pastures beneath Oaks ♦ my ancestors ♦ as much as yours ♦ know the Earth and its way more than we do today ♦ as White people.

I was raised in the Midwest predominately in Oshkosh, Wisconsin where Native culture is still celebrated & where cities ♦ like Oshkosh ♦ are named after Chiefs and tribal nations to honor the land, its people, and its history. I grew up on the waterways of Lake Winnebago and Lake Butte sea mortes connected by the fox river and my art teacher, Cori Conrad, took me to Milwaukee to experience the celebration of Native culture at Indian Summer Fest. I was raised as a white child surrounded by indigenous names and stories and I moved to Illinois and now, Michigan, where I continue to learn of the sacredness & sanctity of Native life and the protection of land ♦ of water.

Forgiveness is THE great healer.

What happened in Alaska in 1989 was poisonous..a great loss...yet forgiveness has allowed the Earth to heal her water and her fish and her people. We, as white people ♦ as Italians or Irish ♦ or wherever your great grandparents, grandparents, or parents came from ♦ must forgive ourselves. We must forgive our reliance on oil. We must forgive ourselves for the atrocities committed by ancestors we may not have known to Nations we personally did not know and we must forgive ourselves for the atrocities our people and we ourselves have done to our Earth.

When we find this forgiveness we may seek forgiveness from others and we may ask How can I help? HOW CAN WE HELP?

This water. These fish. These trees. These animals...now depend on the forgiveness and grace of humans to survive & as white people we must learn to honor and appreciate all Native & Indigenous people who work as stewards of the Earth protecting it.

We must respect.

We as white people ♦ me growing up in an Italian-Irish household learned about Respect ♦ we must respect our elders. We must restore the virtues of Respect & Forgiveness in our world. This is what God teaches us. This is our purpose. Respect & Forgive. Work. Learn.

We must continue protecting Alaskan waterways because we have been doing it out of these virtues and we have been shown the promise of living these virtues ♦ -the oil has been cleaned & the Earth is continuing to heal.,to be restored.

Earlier this week I underwent abdominal surgery. I endured something that less than 2% of women experience and yet my body is healing. Please see yourself and your

body♦or your loved one & their body♦-please acknowledge the pain & trauma in your own life and body♦I invite you to acknowledge the time it took to heal & to question if healing is linear. My body is physically still healing...but after the skin comes back together and my blood flows freely again...my mind, my emotions♦my spirit will still need consistent restoration.

To restore does not mean it is finished.

I live one mile from the Detroit border. There are thousands of historical homes in need of restoration. People want to tear them down♦and they do♦because it takes too much time, too much money, too much upkeep. But doesn't building something new take just the same?

When you witness a fully restored historical home♦you feel awe, wonder, & appreciation. But most of all you feel Respect for the ability to honor history & help it heal.

When you go to a beach on the North Shore of Chicago it appears beautiful♦but then you receive state messages about the toxicity levels warning you not to swim.

We have the power to work with the land, to honor & respect it.

We have the ability to learn from Native & Indigenous people and to respect their ability to commune with and understand Nature.

We must continue to protect and restore Alaskan waterways and Land. We must do this to reveal the virtues we have been born into. We must honor Respect & Forgiveness and work together as One Nation. We must Respect and Forgive ourselves by honoring our promises.

I invite you to sit at the edge of land and water and to listen with every part of yourself. I invite you to see your body and your health as that water, as that shoreline♦as that Salmon we use as a metaphor for going upstream against all odds. I invite you to acknowledge your inner wisdom and strength♦and to see the strength in the water, the land, & in these Stewards who teach us so much.

Francesca Gagliano

Linden O'Toole

Dear EVOS Trustee Council,

My family has NEVER RECOVERED from economic effects of the EXxon Valdez spill.

My name is Linden O'Toole. I'm a concerned citizen of Cordova, and I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

(Add some of your personal story - why you care about protecting the homelands of the Native Eyak People, the wild salmon, abundance of wilderness and wildlife, clean water, etc.)

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,

Linden O'Toole

Shelley Hunter

My name is Shelley Hunter. I'm a concerned citizen of the United States of America, and I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left. It is our responsibility as citizens of the United States of America to leave wild lands to our future generations.

December 10, 2020

EVOS Trustee Council
4230 University Drive, Ste 220
Anchorage, AK 99508-4650

Dear EVOS Trustee Council Members,

My name is Peter Andersen and I am a lifelong Alaskan born and raised in Cordova, Alaska and a shareholder of Chugach Alaska Corporation and Eyak Corporation. I currently work and live in Anchorage Alaska along with my wife and two daughters. I had the unfortunate experience of living through the Exxon Valdez oil spill and its devastating aftermath.

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the “New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill” proposal submitted by the EVOS Think Tank of Citizens.

It is my understanding that the following four draft resolutions, if approved, would continue current “spend down” efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council:

1. Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules;
2. Draft Resolution 20-B: Change to procedures for approval of multi-year projects;
3. Draft Resolution 20-C: Combining habitat and research sub-accounts; and
4. Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

I am writing in support of the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Chugach Region communities, including those represented by this letter, were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources, the effects of lingering oil and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the above resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Thank you for your consideration.

Sincerely,

A handwritten signature in blue ink, appearing to read "Peter Andersen". The signature is stylized with a large, flowing "P" and "A".

William Lindow

I fully support the EVOSTC taking an ecosystem approach to its decision making. I think it is very important to establish that the ecosystem of the Copper River Delta must include the entire delta, including the portion of the Delta east of the main stem of the Copper. If possible, the ecosystem should also include the watersheds of the Katalla and Bering Rivers and the drainages of Controller Bay.

As a 40 year commercial fisherman and resident of Cordova, I am very familiar with these areas and their immense ecological and economic value to the greater EVOS region and the entire State of Alaska.

Johnnie Tucker

Please add my name in support of resolution 20-D

The ecosystem approach is a great, logical next step for the EVOS Trustee Council.

I have spent much of the past 40 years as a helicopter pilot in this region and have seen first hand the inner woven dependency of the wildlife, fish and human users on the entire ecosystem. An event, a mining development or overharvest in one place can greatly affect the natural balance far from its source.

Thank you for all your efforts to date and please add my strong endorsement of resolution 20-D.

Gayle Ranney

I support resolution 20-D, taking an eco system approach to the trustee council actions.

The Copper River Delta, along with the Bering River drainage is amongst the most valuable fish and wildlife habitat in Alaska. Steps taken now to protect this diverse area will have far reaching effects in the future. This in turn will assist the healthy recovery of the entire Gulf of Alaska area.

Thank you for this opportunity to voice my strong support of resolution 20-D

Bill Black

In addition to my previous comments I would like to add these. 2020 was my fiftieth (50) year fishing out of Cordova. I didn't realize this fun fact until about a minute ago when I added them up ! I have a 5 year old granddaughter in kindergarten in Cordova and I have high hopes She'll be part of a State champions team representing a prosperous and healthy Cordova down the line of time. I support Draft Resolution 20-D.

Robert Martin

Resolution D would permit the government trustees to conduct restoration where they deem most appropriate, unencumbered by the arbitrary, unscientific spill boundary drawn a quarter of a century ago, and thus I recommend Resolution D be adopted.

zac chapman

please extend the boundary and take an ecosystems approach!

Chantel Smith

Oil spills do but know boundaries, that's why it is important to have an ecosystem based approach to restoration. Please support

Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

Thank you

Paul Garrison

Hello, I worked on the Exxon Oil Spill in 1989 and we chased sludge all over the north end of Kodiak Island. This is miles from the original spill. Oil spills do but know boundaries, that's why it is important to have an ecosystem based approach to restoration. Please support Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

Nancy Nelson

I oppose this resolution and ask that you please consider the Think Tanks recommendations.

Ron Thomson

I have fished the Prince William Sound/Copper River gillnet fishery for the last 40 years. While I am not opposed to resource development, including mining and oil, I do believe that the ecosystem in the copper river and bearing river areas is too fragile and very susceptible to a great deal of harm if an oil spill or some other environmental disaster were to occur. I give my support to the approval of resolution D

Dear EVOS Trustee Council,

My name is Carol Goldberg. I'm a concerned citizen of the United States, and I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

I was in Cordova, AK at the time of the 1989 oil spill and saw the devastation to the water, land, animals, fish and to the peoples of the area. I have since been back to Cordova throughout the years, floated the Copper River a number of times, as well as having spent

time exploring the Copper River Delta. I know many people who have dedicated their lives to restoring this area and understand the importance of this Resolution 20-D.

So it is with first hand knowledge that I come to you.

I urge you to approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,

Carol Goldberg

Christopher Maxcy

I have been a commercial fisherman in Area E since 1988. I completely support the approval of Resolution D. It only makes sense to extend the oil spill restoration zone boundaries to include the Copper River Delta and Bering River. Restoration boundary lines drawn after the oil spill were arbitrarily drawn and did not consider ecosystems

The Copper River Delta, Bering River, Controller Bay and Martin River are important parts of the ecosystems that lie to the west. EVOSTC's approval of Resolution D makes sense and will have a positive impact on the future of Cordova, its residents and its wildlife.

Heather Maxcy

The Copper River Delta, Bering River, Martin River and Controller Bay are important parts of the ecosystems that lie to the west. Arbitrarily drawn boundary lines that do not consider entire ecosystems do not allow for proper management and ultimately the health and welfare of its systems and occupants.

Our family has commercial fished in Area E since 1988 and I completely support the approval of Resolution D. It shows that the EVOSTC is taking a far sighted and ecosystem approach in their decision making that will have positive long term effects on the ecosystems, fisheries and the inhabitants involved.

Thank you for considering correcting a problem that occurred so many years ago and for giving the public a chance to comment on the resolution.

Meckenzie Feinen

We need the Oil Spill Restoration Boundary to encompass all of Copper River Delta, including the Bering river and Coalfields. These actions are way overdue.

Hope Cross Dezember

Please continue to extend the oil spill restoration to include an ecosystem approach for the entire copper river. Please allow healers to continue to heal from this devistating oil spill. Thank you

Melinda Roddick

Hello! I SUPPORT Resolution 20-D to approve the extension of the Restoration Boundary.

Nichollette Ronga

Stand behind our earth!

Liz Ray

Please extend the extension of the Exxon Valdez Oil Spill (EVOS) Restoration Boundary. It is critical to take an ecosystem approach to this region that includes the Copper River Delta in order to ensure future ecological restoration and preservation. Thank you.

Olivia Arredondo

Hello, my name is Olivia Arredondo and as citizen on this beautiful planet , I implore the EVOS Trustee Council to approve the extention of the Restoration Boundary. It is imperative that we as citizens of this planet operate sustainably and approach all our future actions with our precious ecosystem in mind.

This is especially true and important when it comes to an oil spill boundary. Protection, preservation and restoration should be the main priorities moving forward.

Thank you.

Randy Hamson

I am in great favor in continuing the expansion of recovery and restoration of the copper river delta. Let's keep up with the areas needs and complete this project on its entirety.

Davin Gilmore

Protect our salmon and sealife. They are our states most valuable asset and the southern coast of Alaska is a gem that should be protected so that my son and his children and their children will be able to enjoy the awe inspiring beauty and bounty Alaska has to offer.

Kathleen Keating

Dear EVOS Trustee Council,

I, without reservation, approve changing and extending the EVOS restoration boundaries to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill restoration boundary to include the entire Copper River Delta region and the Bering River Coalfields.

I also wholeheartedly approve EVOSTC financial support to retire the Bering River coalfields owned by KADCO for restoration and conservation purposes, once and for all.

Protecting all of the endangered and impacted fish and wildlife habitat in both sister watersheds will allow the Exxon oil spill region to fully recover.

I'm a recreationist and have experienced first hand the pristine beauty of the Copper River watershed and surrounds. The abundance of clean water, wild salmon, wilderness and other wildlife in this area is unparalleled in the world.

Thank you,
Kathleen Keating

Madison Perlick

As a commercial salmon fisherman out of Kodiak, I recognize the importance of protecting these rich marine ecosystems both for the health of our planet and the Alaskan economy and way of life. I beg you to adopt a holistic ecosystem approach that extends through the copper river delta, prince William sound, and all fishing and spawning waters of Alaska. Permanently protect our lands and waters from drilling and mining.

Ariana Beck

I would love to support the Draft Resolution D. It is our future we have to stand up for and fight for!!! The Earth has given so much to us. It is definately the time to give back! And this Resolution is one of many steps we should do. So I am more than happy to support you here. Kind regards from Germany

Emily Stolarczyk

I write in support of Resolution 20-D. Expanding the EVOS spill boundary to the east will allow the Trustee Council to target restoration projects to resources that were impacted by the oil spill but that do not spend their entire life cycle within the current boundary. As spelled out in the resolution: The available science has consistently pointed to a broader ecological footprint attributable to the spill than is represented by the currently defined spill area. For example, the Alaska Department of Fish and Game has shown red salmon in Prince William Sound are derived from natal streams as far away as the Copper and Bering Rivers, and many of the 90 species of sea birds that were injured by the spill move significant distances (i.e., well outside the designated spill area) throughout the year, especially during the reproductive season.

Salmon are a particularly apt example of the need for the resolution, given their migratory nature and the challenging state of salmon resources in and offshore of Alaska, including in Prince William Sound and the Copper River Delta/Bering River area. Thank you for the opportunity to comment on this important issue.

I fully support the EVOSTC taking an ecosystem approach to its decision making. I think it is very important to establish that the ecosystem of the Copper River Delta must include the entire delta, including the portion of the Delta east of the main stem of the Copper. If possible, the ecosystem should also include the watersheds of the Katalla and Bering Rivers and the drainages of Controller Bay. I am very familiar with these areas and their immense ecological and economic value to the greater EVOS region and the entire State of Alaska.

Jeremy Donahue

I write in support of Resolution 20-D.

Expanding the EVOS spill boundary to the east will allow the Trustee Council to target restoration projects to resources that were impacted by the oil spill but that do not spend their entire life cycle within the current boundary. As spelled out in the resolution: The available science has consistently pointed to a broader ecological footprint attributable to the spill than is represented by the currently defined spill area. For example, the Alaska Department of Fish and Game has shown red salmon in Prince William Sound are derived from natal streams as far away as the Copper and Bering Rivers, and many of the 90 species of sea birds that were injured by the spill move significant distances (i.e., well outside the designated spill area) throughout the year, especially during the reproductive season.

Salmon are a particularly apt example of the need for the resolution, given their migratory nature and the challenging state of salmon resources in and offshore of Alaska, including in Prince William Sound and the Copper River Delta/Bering River area. Thank you for the opportunity to comment on this important issue.

I fully support the EVOSTC taking an ecosystem approach to its decision making. If possible, the ecosystem should also include the watersheds of the Katalla and Bering Rivers and the drainages of Controller Bay. I am very familiar with these areas and their immense ecological and economic value to the greater EVOS region and the entire State of Alaska.

Steve Ranney

Please add my wholehearted support for adoption of resolution 20-D. The ecosystem approach, if utilized in a careful and deliberate manner will add the the important restoration work the EVOS Trustees have accomplished. This is particularly true in the Copper River and Bering River watersheds, due to their sheer immense size and vital importance to everything from our commercial fishing fleet, subsistence harvest and recreational activities.

There have been some negative public comments lately regarding past EVOS land actions. Taking these into consideration the KADCO coal subsurface rights acquisition makes even more sense. This would return this mineral deposit from an international corporation to local control, potentially even a native conservancy, while at the same time protecting a vast, fish and wildlife rich ecosystem.

Thank you for your consideration and please adopt resolution 20-D

Karen Ruud

Encourage adoption of this draft. Restoration needs to continue with the proposed ecosystem approach to boundary.

Tracy E. H. List

Please expand protection to include all of the Copper River Delta to preserve the pristine environment and protect our future salmon fisheries.

Ben McAninch

I agree with Wildlife Forever and I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. I support the adoption of Resolution 20-D.

Nathan Widmann

Dear EVOS Trustee Council,

My name is Nathan Widmann. I'm a concerned citizen of Cordova, and I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,
Nathan Widmann

Michael Cassidy

I agree with Wildlife Forever and strongly support-I support the adoption of resolution 20D

Molly Leebove

I adore this land. This land is abundant, wild and full of life. I come from a land that is destroyed by industrialization, we are lonely here for our more than human kin. I have had the deep honor of spending time on Eyak land in Cordova, Alaska two times in these past four years. This place is life itself and it is essential to all our survival that it is protected. On the edge of climate collapse, we need as much wild land as is physically possible.

Dave Washburn

I strongly support the Trustee Council using an ecosystem approach to future restoration and support including the entire Copper River Delta in habitat protection decisions by the Council. Including the entirety of the Copper River Delta in the spill area boundary will help the conservation of both Prince William Sound and the Copper River Delta. I support adoption of Resolution 20-D. Thank you.

Wendy Ranney

Dear EVOS Trustee Council;

I would like to express my appreciation and support to the Exxon Valdez Oil Spill Trustee Council for offering Trustee Council Resolution 20-D for public Support.

I strongly recommend that Resolution 20-D be adopted.

As a landowner in the Katalla River Valley, my family and I take our stewardship of these ecosystems very seriously. Because we frequent the Katalla and Bering River Valleys often, we can see first-hand the cultural and ecological connections and impacts that this area has with the Cordova Community.

The Exxon disaster has affected Ecosystems beyond the original established boundaries and it is irresponsible to draw a proverbial line in the sand and say that areas outside of this line are not all interconnected. Impacted wildlife populations are still visible some 30 years after this horrific event.

The original boundaries were set to include "the maximum extent of oiled shorelines, the severely affected communities and their immediate human use area, and the adjacent uplands to the watershed divide." You cannot consider the community of Cordova (who was drastically impacted) without considering the Copper River and Bering River basins.

I strongly feel that adopting an ecosystem approach for funding restoration projects is the best approach moving forward. As the Resolution states, "The available science has consistently pointed to a broader ecological footprint attributable to the spill than is represented by the currently defined spill area."

Habitat Protection and or enhancements of the Copper River & Bering River Basins are essential to the revitalization of still impacted Herring Biomass which directly influence the Salmon populations in the currently marked "effected" areas. Nutrient exchanges through the gulf stream storms and wildlife fluidity are not recognized in the original boundaries defined by the Council. A ruled line through the Gulf of Alaska does not allow for the movements of migratory animals that were impacted by the spill.

Adopting Resolution 20-D is an easy way for us all to be Stewards of this environment and take responsibility to protect and preserve this pristine wilderness.

Revising the criteria for projects outside the oil spill zone does not take away any of the power of the council. If anything, it shows the willingness to use science, with an ecosystem approach to fund projects with a true focus on recovering populations while sustaining other recovered populations, and leaving a sustainable legacy for future generations. It is our responsibility to clean this up and leave only pristine wilderness.

Once again, I thank you for giving me an opportunity to comment on this resolution.

Sincerely,
Wendy A Ranney

Theresa Nangle Obermeyer, Ph.D.

I do not support the remaining EVOS funds being transferred to a private community development foundation with no experience in environmental restoration. Therefore, I support Resolution D which will permit the current government trustees to conduct restoration where they deem appropriate.

Timothy Metz

Dear EVOS Trustee Council,

I strongly support the approval of Resolution D and the expansion of the Oil Spill Restoration Boundary to include the Copper River Delta. As an Area E drift gillnet fisherman for the last 20 years, I am intimately familiar with the connection of these wild areas that make up our fishing grounds. As a professional forester and fisheries restorationist for the last 25 years on the Northcoast of California, I am also intimately familiar with how the slippery slope of development leads to sharp declines in fish populations that are extremely difficult, expensive and often impossible to reverse.

I feel strongly that it's our duty to protect and restore the last best of the best wild runs where there's still the habitat. The road across the Delta and the Carbon Mountain mine would be the beginning of the end of the great wild runs of the Copper River. These Copper River runs and the Cordova Community are deeply intertwined with the ecosystem of the Sound that the EVOS Trustees Council was created to revitalize and restore. I've seen first hand the devastation from the Valdez disaster, and we cannot allow poorly designed exploitive development to further stress the ecosystems of the region on which we all rely. Preventing further habitat loss in this wild and incredible place must be at the top of the agenda as we stare down sea-level rise, ocean acidification and Climate Change.

We are all in strong support of Resolution D! It's the right move at this point in this decades long process!

Brette Howard

Extending the Restoration Boundary and protecting all of the Copper River Delta will give the people, fish, and wildlife still impacted by the Oil Spill a fighting chance for full recovery and a viable future. It is the responsibility of this generation to protect the sacred homelands of the Eyak and Tlingit Nations for the future.

Thank you Brette Howard

Robin McGill

I support the expansion of the restoration boundary. I'm pregnant, bringing new life into this world and I can't help but think of the next 7 generations of humans who will live on this planet. It's our responsibility as good ancestors to do everything in our power to make sure we leave this earth better than we found it. We need to care for these wetlands as if they were our own backyard.

Ryan Crumley

Dear EVOS Trustee Council,

My name is Ryan Crumley, Ph.D in Water Resources Science. I'm a concerned citizen of Portland, Oregon, a snow hydrologist that studies streamflow and discharge in Alaskan river systems, and I approve Resolution 20-D.

I support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are essential to coastal Alaskan communities.

I know that watershed and ecosystem health depend on habitat and connections from the headwaters to the deltas and bays in the Chugach mountains. I have researched the connection between the seasonality of streamflow in Glacier Bay National Park and the downstream estuarine ecosystems in a warming climate scenario (Crumley et al., 2019). I have also coauthored a regional Gulf of Alaska wide study of streamflow characteristics and their relationship to marine habitat, salinity profiles in the ocean, freshwater inputs, sedimentation, and the influx of nutrients to the delta ecosystems (Sergeant et al., 2020). The interconnected Copper and Bering River ecosystems form a vast, contiguous wildlife corridor. These watersheds and stream corridors must be kept connected in order to support the return of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,

Ryan Crumley, Ph.D.

Sincerely,
Hannah

Tania Harrison

Dear EVOS Trustee Council,

My name is Tania Harrison, a commercial fisherman and resident of Cordova, AK. I support Resolution 20-D. The Copper and Bering Rivers are unique pristine wetlands that support a myriad of resident and migratory species. Protecting this wilderness is vital to sustaining the ecology and the surrounding communities that depend on subsistence and commercial harvest of fish.

The effects of an oil spill reach far further than the immediate site. It is our responsibility to protect the natural habitat for all areas under threat of contamination from a potential spill. Please consider approving Resolution 20-D.

Thank you,
Tania Harrison

Marc Carrel

Dear EVOS Trustee Council,

As a commercial fisherman residing in Cordova, I enthusiastically support draft resolution 20-D. The ecological and economic impacts of the Exxon Valdez oil spill reached far beyond the immediate spill area, and it is time for the Trustee Council to expand its habitat restoration efforts. The Copper River Delta is an extraordinary habitat for fish, birds and land mammals, and supports a commercial fishery that is the lifeblood of Cordova. Funding habitat restoration projects on the delta will help to alleviate the damage caused by the 1989 oil spill and support one of the hardest hit communities of that disaster well into the future.

Thank you for your efforts.

Sincerely,

Marc Carrel

Melanie Brown

Please expand the Exxon Valdez Oil Spill Restoration Plan to include Ecosystem Based Management that includes the entire watershed and or ecosystem.

Thank you,
Melanie Brown

Jackson Ramsland

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

As a avid conservationist and naturalist, I wholly believe the protection of wild places in this critical time has never been more important. We must not extract this earth to the very last drop. We must protect these places!

Please approve Resolution 20-D. Thank you for this opportunity to comment.
Jackson C. Ramsland

Mark Cummings

Hello and Thank You for taking community comments: Let me be concise, understanding the ecosystem of a problem like this is required for optimal results. I support Draft Resolution D!

Natalie Koski-Karell

The restoration boundary must be revised and extended in order to consider the health of the entire ecosystem.

Jennifer Edwards

REPRESENTATIVE ANDY JOSEPHSON

December 16, 2020

Exxon Valdez Oil Spill Trustee Council
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650
SUBJECT: Comments on EVOSTC Proposed Resolutions

Submitted electronically

To Whom It May Concern:

I write today to provide my comments on the four resolutions proposed by the Exxon Valdez Oil Spill Trustee Council (EVOSTC, Council). I have long been a strong advocate for the post-oil spill work of restoration in Prince William Sound and generally support the EVOSTC in their important mission of overseeing the restoration of this injured ecosystem.

I have serious concerns with Resolutions 20-A, 20-B, and 20-C, which all appear to actively reduce public participation in the decision making and management processes used by the Council. The rationale given for why these three resolutions are needed is to provide the EVOSTC with more flexibility. Unfortunately, no explanation is provided as to what makes current administrative parameters too restrictive or unworkable. These resolutions all raise concerns with transparency and accountability. The supporting information provided with these resolutions is scant and does not provide enough context for the public to form a real understanding of how EVOS Restoration plan processes will change if these resolutions pass. Due to a lack of formal justification, it is not at all evident why proposed changes are necessary or beneficial.

Resolution 20-A, which proposes elimination of the EVOSTC annual public meeting causes the most concern. This yearly opportunity for public discourse and involvement is essential to ensuring nimble and responsive management plans. A shift from annual planning to a ten-year cycle would hinder scientific review and public response for on-going projects, giving the Council less flexibility in adapting projects as needed. While I can understand EVOSTC's desire to reduce administrative costs, this should not be done at the expense of public participation. In my view, holding an annual meeting is not an unreasonable administrative burden for the Council but rather a way to foster the "meaningful public participation" required of EVOSTC to adhere to the 1991 Memorandum of Agreement and Consent Decree between the United States and the State of Alaska.

Resolution 20-B aims at allowing the Council to approve multi-year projects without a requirement for an annual review. Many of the concerns I cited relating to Resolution 20-A apply to this resolution as well. Eliminating the annual review process has the potential to stymie public involvement and adversely impact the ability of the Council to integrate research findings into projects. The 1994 Restoration Plan, approved by the governments to guide the Restoration Program, requires an Adaptive Management approach to restoration, with annual or multi-year work plans. It is reasonable for the public to question the impacts that eliminating annual project reports and annual multi-year budget approvals

might have on project management, efficient and productive use of EVOSTC funds, and public confidence in the process.

I believe that Resolution 20-C, which seeks to combine habitat and research subaccounts, though intended as a streamlining measure, is unnecessary and could have unintended consequences. If these accounts are combined spending could end up being biased toward supporting more science centric projects at the expense of habitat restoration efforts. Though restoration efforts have been impressive to date and the EVOSTC has made great strides, the environment of the spill region has still not fully rebounded ecologically. A need remains to ensure the continued protection of impacted ecosystems and I would support the pursuit of additional large parcel habitat protection agreements. It is also worth noting that adoption of this resolution would lead to a need to overcome additional legal hurdles (either through getting Congress to modify the 1999 law that set restrictions on these accounts or by transferring funds to Department of Interior's Natural Resource Damage Assessment and Restoration Fund and likely weakening investment returns). If Resolution 20-C is successful, I strongly urge the Council to pursue a legal fix in Congress, allowing the Alaska Department of Revenue (DOR) to continue managing this fund. DOR's ability to be proactive in achieving return on investments would help assure the future sustainability of this fund, which in this time of economic uncertainty for Alaska is more important than ever.

I have a much more favorable opinion with respect to Resolution 20-D. I believe that there is a strong case for adopting an ecosystem approach when discussing the designated spill boundary and support this resolution. The current boundary used is somewhat arbitrary, especially when one considers the interconnected nature of watersheds and the broad migratory ranges of certain wildlife species (the anadromous life cycle of salmon being a prime example). Wildlife and weather patterns do not adhere to the artificial geographic boundaries we establish and taking a more holistic approach to restoration efforts and research has the potential to be very beneficial to populations most adversely impacted by the spill.

On the whole, I want to encourage the Council to provide the public with significantly more detail as to why these resolutions are being proposed and how they would be implemented. I strongly favor transparent and inclusive public processes and encourage the EVOSTC to extend the public comment period on these resolutions and provide more background information and justification. I appreciate your time and consideration.

Sincerely,

Representative Andy Josephson

Rob Ammerman

I agree with a sustainable and equitable approach to land management. It seems that an oil spill recovery zone is an appropriate area to use this ecosystem approach.

Thanks for the consideration-
Rob Ammerman

Tanya Komakhuk

Thank you for the opportunity to submit public comment on Resolution 20-D. It's my understanding that Resolution 20-D would expand funding outside of the EVOS spill boundary – I oppose.

The people most impacted by EVOS within the spill boundary still have not recovered, same as the waters and lands. Until full recovery of life and habitat is achieved within the spill zone, I do not support expanding. Lastly, the time period that the four resolutions were released is not ideal.

The world is going through the COVID-19 pandemic, the United States just had a tense Presidential election and these resolutions were put out for public comment during the holidays – I believe that at the least - these resolutions should be postponed until more meaningful conversations can be had and there is more understanding of lasting impacts that these resolutions could have for the communities and people most impacted by the Exxon Valdez Oil Spill.

Ariel Edwards

Dear EVOS Trustee Council,

My name is Ariel Edwards. I am a concerned citizen of Cordova, AK, and I approve Resolution 20-D. I strongly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. It has been scientifically documented by Fish and Game, and other agencies, how important this entire region is to the success of the ecosystem. I urge you to protect this thriving, roadless watershed, as it is absolutely essential to coastal Alaskan communities like my own.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness that is inherent to the survival of thousands of wild salmon and the people that resource supports. We must protect the wild salmon ecosystems we still have left. The Copper and Bering River ecosystems host the migration of critical fish species impacted by the 1989 Exxon Valdez Oil Spill, namely salmon and herring. These fish, and others, rely on both of these connected ecosystems in order to survive.

Protecting all of this vital habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility, as humans and stewards of this great land, to protect the wild salmon ecosystems that we have left. I have been lucky enough to work in and see the amazing Sockeye salmon spawning returns throughout the Copper and Bering River systems, and it is incredibly important to protect. Coastal Alaskan communities rely on these salmon returns, and thus rely on the health of this delicately balanced ecosystem.

I implore you to approve Resolution 20-D, for the benefit of Alaskan ecosystems and Alaskan communities. Thank you for this opportunity to comment.

Sincerely,
Ariel Edwards

Lisbeth Pelsue

I'm writing to express my support for the expansion of passing Resolution D, to expand the Exxon Valdez Oil Spill Restoration Boundary to incorporate an ecosystem approach and include the entire Copper River Delta. Prince William Bay and the Copper River Delta are interdependent waterways that are absolutely essential to the health of the ecosystem of the region and the planet's health overall. Prince William Bay and surrounding areas have still not recovered 30 years after the Exxon Valdez Oil Spill, and any future spills in the whole region would have catastrophic effects for the ecosystem and all that depend on it for life. The first step of restoration of any kind is preventing harm by protecting what you still have as intact wilderness- the Copper River Delta, including the Bering River Coal fields need to be protected through the expansion of the EVOS Boundary in acknowledgement of the interdependence of this area with Prince William Sound. Thank you for helping to pass Resolution D and create meaningful restoration.

RJ Kopchak

In 1989 the spill changed the way the regional ecosystems functioned- the basic structure of the food web was altered by the spill and clean up efforts. The ecosystems of the North Gulf of Alaska and Prince William Sound are interconnected, and hard "spill boundaries" fail to recognize the interdependence of these connected systems.

One example of this "interdependence" is at play at the confluence of the Copper River Delta and the Bering Glacier ecosystem. Although "confluence" is most often used to describe where major rivers join it is an appropriate descriptor for this region. The freshwater systems from these two massive drainages, and the coastal currents that drive the North Gulf ecosystem productivity converge here- and the biological processes triggered by these interactions create some of the world's richest waters.

Expansion of the boundaries takes into consideration the reality of "ecosystem based" restoration and habitat protection

Please support this important resolution-

RJ Kopchak

40 years commercial fishing

Hunter-Gatherer

Science Based Conservationist

Susanna Colloredo-Mansfeld

I approve resolution 20D. I came to Alaska the year after the Exxon Valdez oil spill. I went to several conferences and met many people who were devastated by the spill. I made good friends there in Alaska, and continued to come and visit with my cherished friends. The effects of the spill were extremely difficult, on the people, the salmon and the whole environment, and so many have had lasting serious consequences, to this day.

I have come to Cordova many times. I found the Copper River Delta to be one of the most beautiful places I have ever experienced in my life, and I have traveled the world. I have taken a small plane over the Delta and the Bering River watershed. I know they are connected as one ecosystem with Prince William Sound. I admire this Resolution D's intent to take an ecosystem approach for your work and decisions regarding restoration and conservation purchases. Please include the Bering River coalfields and watershed in the extension of the oil spill restoration boundary. It is all one integrated ecosystem with the Prince William Sound. I also know that this will honor the traditions and needs of the Eyak and Native people who have been there long before we came to this wild salmon, pristine and beautiful region.

Nicholas Rice

Dear EVOS Trustee Council,

My name is Nicholas Rice. I'm a former commercial fisherman of the Prince William Sound and Copper River delta and was born and raised in Anchorage.

I approve Resolution 20-D and extending the EVOS restoration boundaries to incorporate an ecosystem approach, and ask that you extend the Exxon Valdez Oil Spill restoration boundary to include the entire Copper River Delta region and the Bering River Coalfields.

I approve EVOSTC financial support to retire the Bering River coalfields owned by KADCO for restoration and conservation purposes, once and for all.

Protecting all of the endangered and impacted fish and wildlife habitat "in both sister watersheds" will allow the Exxon oil spill region to fully recover.

Having been born in August '89, I've never seen a delta un-impacted by the spill and whole-heartedly support the effort to restore it.

Thank you,
Nick

Robert Skorkowsky

These are personal comments and do not reflect an agency position. Having managed the Cordova Ranger District of the Chugach National Forest for 5 years, I have gained a deep understanding of the impacts of EVOS and worked with the Trustee Council on numerous restoration projects. Working with the community and ecosystems it was very apparent that the effects of EVOS were much more extensive and affected the broader ecosystem including the Copper River Delta and the Bearing River fishery. The economy of Cordova and the economic sustainability of the region depends on healthy ecosystems and restoration and protection of the fisheries and lands that support the community and Alaskan economy. Based on my experience it is clear that the line distinguishing the spill boundary was arbitrary in regards to the ecosystem function and connectivity to the salmon rearing waters of the Copper River Delta. Please vote to expand the boundary so that these areas can also be a focus of the restoration that is needed to recover the fisheries, economic sustainability and cultural landscape of the area.

Respectfully,
Robert Skorkowsky

peter brockert

Dear EVOS Trustee Council,

I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Please approve Resolution 20-D.

Thank you for this opportunity to comment.

Sincerely,

Peter J. Brockert

Born and raised, 62 years Alaskan Resident.

42 years, Commercial fisherman and permit holder in PWS and the Copper River.

Landa Bailly

I support this resolution.

Kent Herschleb

My name is Kent "Curly" Herschleb. I have fished in Prince William Sound and the Copper River for over 45 years. First season was in the seine skiff for Alec Donaldson in 1968. So I've seen the Sound and the Flats well before the Spill and after. The fact that the area was separated as regards effects from the spill never made sense. Fish stray around a lot, currents change. For instance before the Spill on the Flats I would catch herring in my salmon gillnet every year; not many, but they were around. Of course they're not around much anymore anywhere in the whole area now--30 years on. The long and the short of it is, include all of Area E in the recovery zone....long overdue.

Cara Nelson

I am writing to SUPPORT Resolution 20-D to amend the 1994 Restoration Plan and allow EVOS Trust funding decisions to be made on an ecosystem approach.

As a Professor of Restoration Ecology at University of Montana and Chair of the Ecosystem Restoration Thematic Group of the International Union for Conservation of Nature's Commission on Ecosystem Management, I conduct studies on ecosystem processes and methods for repairing degraded ecosystems. If there is one thing I have learned during my career, it is that marine environments, coastal areas, and river valleys are interdependent and must be managed accordingly. The proposed amendment and its call for an ecosystem approach is an important step in the right direction.

Thanks for the opportunity to comment on this critically important issue.

Oshiana Black

Dear Exxon Oil Spill Trustee Council,

I believe the entire region of the Copper River should be protected, and I urge you to vote yes on Resolution D. I want to protect our environment and ensure the continuation of our fishery. I want my daughter, who is 5, to always have the beauty of the Copper River ecosystem to come home to. I am from a commercial fishing family and was 6 years old when the Exxon spill happened. Thank you for considering this important resolution.

Oshiana Black

Cordova, Ak

Bruce Tiedeman

Expanding the EVOS original intent appears to be premature for several reasons. One, more information is needed how it will impact all the shareholders of the Native corporations. Two, what is the fiscal impact to these corporations. Three, who will be ultimately responsible for the expanded land designation, I.e., does this take away from the land owners to develop or use this suggested expansion. Four, non-shareholders of native corporations appear to take control of this proposed land area. Five, more information is needed on the long term pros and cons before any decision relating to this expansion. Six, an education process is needed to make the landowners, the shareholders, aware what this really means to them collectively and individually.

I believe good land management is imperative for our native lands. This could be in the form of conservation or economic development, depending on the situation. EVOS hasn't demonstrated fully why this would help this shareholder. Their past performance needs to improve before it expands at the expense of unaware native landowners. Until more information is presented to all, I am inclined not to support such a proposal. I am open to further discussions with anyone on this issue.

Rion Schmidt

Dear EVOS Trustee Council,

My name is Rion Schmidt. I'm a concerned citizen of Alaska, a Chugach, Eyak and Tatitlek shareholder, and I approve Resolution 20-D.

I support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields. Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities. The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

As a former commercial fisherman, subsistence user, and sport fisher of these my ancestral lands, I respectfully ask you to approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,
Rion Schmidt

Storme Webber

I support Draft Resolution D. This land is an irreplaceable treasure and all efforts should be made to preserve and restore it.

Tim Richardson

Dear Members of the Exxon Valdez Trustee Council,

I was the administrative assistant for a Texas Member of Congress who served on the Merchant Marine Committee and Coast Guard Subcommittee when the Exxon Valdez oil spill occurred. My boss had oversight for the spill, however prior to the spill I was contacted by Koniag, Inc., Old Harbor Native Corporation and Akhiok Kaguyak, Inc. who were pursuing an inholding by back proposal that would purchase about half of their Kodiak National Wildlife Refuge inholdings and parts of their forested land on Afognak Island.

During the 1989 August recess of Congress, I visited Kodiak Island was asked to pursue the Native Corps inholding buy backs of some of their lands.

As you know, Koniag, Old Harbor and Akhiok Kaguyak all completed major land sales and conservation easements with the Exxon Valdez Trustee Council. The land sale issues were highly emotional for Kodiak island corporation shareholders but in every case over 80% of the shareholders voted for negotiated sales with EVOS.

The funds were used to capitalize these corporations and to pay shareholder dividends directly from the sale and from permanent funds that were established and that Governor Walter Hickel supported so that the EVOS funds could keep working in Alaska for years to come. All of this worked well and the Trustee Council achieved world class habitat protection agreements that rank amongst the most important conservation achievements of the Clinton Administration era while permanently conserving fish and wildlife species and human services injured by the oil spill.

A multiple array of NGO sportsmen and environmental groups passionately supported the Native Corp promoted land sales and easements. Alaska commercial fishing groups and tourism companies also supported the agreements.

In subsequent years I helped a total of 14 Native corporations pursue successful EVOS habitat protection deals.

Ten years ago I began promoting the purchase of the Korea Alaska Development Corp.'s coal interest in the Copper River Delta on behalf of Wildlife Forever in partnership with the Native Conservancy and Eyak Preservation Council and therefore I am pleased to see the EVOS Council's willingness to consider the use of Ecosystem Management to expand the spill region in order to make an offer to KADCO.

I feel as strongly supportive of world class, large scale habitat acquisition for the Copper River Deltas now as I did when Koniag, Inc., Old Harbor and Ahkiok Kaguyak asked me as a congressional aide to help them transact EVOS habitat agreements that would be a win-win for oil spill injured species and natural resources as well as Native corporations in the spill region.

Thank you again for being willing to consider pursuing a habitat purchase of the Bering River coal field in the Copper River Delta by adopting Resolution 20 D. If you are able to complete a purchase

of the coal field you will avoid mountain top removal coal mining that would devastate the Copper River salmon runs, migratory bird habitat on the Pacific flyway and many other species, including many oil spill injured fish and wildlife in Prince William Sound and you will avoid a massive amount of carbon emissions that would occur if the coal field were to be developed by Pacific Rim coal hungry nations.

Good luck with your far sighted approach to include all of the Copper River Delta in the EVOS spill region.

Tim Richardson
Wildlife Forever
Government Affairs and
Alaska Director

Melina Meyer

Please do not make any decisions on the oil spill boundary during a pandemic. The people affected by the oil spill need to review at a later date.

Jerome Herro

I am in support of Draft Resolution 20-D. The ecosystem approach makes more sense and will ensure better results.

December 16, 2020

Exxon Valdez Oil Spill Trustee Council
 Attention: Chair Jason Brune
 Grace Hall Building
 4230 University Drive, Ste. 220
 Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am a Koniag shareholder. I am an Alaska Native from the spill-impacted region and worked on the oil spill cleanup.

We need to keep the funds in the communities that were affected. The funds should be used to continue clean up and education in those areas. I currently live in Anchorage.

I am a shareholder of Akhiok-Kaguyak, Inc and the area most affected is where our petroglyphs are. The area is also the first hit with the outer ocean.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. I support education for the area and so others can see how the spill impacted the area. Study the long-term effects of the environment and the people who live there.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust

was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

The funds should be kept in the areas that were affected, only.

Sincerely,

Cheryl Eluska

Cheryl.eluska@aki-kodiak.com

907-444-3555

Rachel Flanagan

Dear EVOS Trustee Council,

My name is Rachel Flanagan. I currently live in Anchorage and am a commercial fisherman in Area E, and I approve Resolution 20-D.

I wholeheartedly support changing the EVOS Restoration Boundary to incorporate an ecosystem approach. I ask that you extend the Exxon Valdez Oil Spill Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields.

It has been proven that Prince William Sound red salmon are born in rivers as far away as the Copper and Bering, further proving how similar and dependent these areas are. The interconnected Copper and Bering River ecosystems form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left.

Thriving, roadless watersheds like the Copper and the Bering are absolutely priceless and essential to coastal Alaskan communities.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Additionally, as a commercial fisherman in this area, the further protection of these environments is critical to my lifestyle and livelihood. I have never known the delta or sound without the impact of the oil spill, but it is obvious that it is still recovering. I believe it is our duty to restore this ecosystem as well as to protect its future from short-sighted and potential irreversibly harmful development.

Please approve Resolution 20-D. Thank you for this opportunity to comment.

Sincerely,
Rachel Flanagan

Katy Rexford

To Whom It May Concern,

I strongly support - and urge you to support - Draft Resolution 20-D and the adoption of an ecosystem approach to the oil spill boundary. It is imperative to include the Copper River Delta and Bering River coalfields in the EVOS Restoration Boundary in order to fully and truly help species recover and ensure the health of Prince William Sound for years to come.

As the director of a community supported fishery in Anchorage whose business relies on the success of small boat fishermen in Prince William Sound, I believe that Resolution 20-D will help ensure the long-term health of Prince William Sound. My business brings pristine seafood to the dinner tables of nearly 3,000 Alaskans annually, much of which is sourced from Prince William Sound. This small business helps keep our coastal communities thriving and would be severely negatively impacted if the land-based ecosystem on which Prince William Sound depends was jeopardized.

The Copper River Delta and Bering River watershed form a vast, contiguous, pristine wildlife corridor. These watersheds are fully intact and must be kept intact in order to support returns of thousands of spawning salmon each year. We must protect the wild salmon ecosystems we still have left in order to ensure the survival and revitalization of those we lost due to the Exxon Valdez spill.

Critical fish species, such as salmon and herring, that were impacted by the 1989 Exxon Valdez Oil Spill, migrate between the Delta and the Sound annually. Like thousands of other animals, fish rely on both of these connected ecosystems in order to survive.

Protecting all of this habitat will provide the impacted fish and wildlife in the oil spill region a much better chance at recovery. It is our responsibility as humans to protect the wild salmon ecosystems we still have left.

Please approve Resolution 20-D, and thank you for the opportunity to participate in this process.

Sincerely,

Katy Rexford
Anchorage, AK

Dawn Button

YES to Resolution 20-D! I support changing the EVOS Restoration Boundary to incorporate an ecosystem approach to the oil spill boundary. Please extend the Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields!

Nicholas Nebesky

I have been a commercial fisherman on the Copper River Flats/Bering River for 12 years, and I support Resolution 20-D. I believe in what it stands for and what it hopes to achieve.

Mark Hazeltine

As a life long copper river delta/ prince William sound fisherman and Alaskan I would like to voice my support of this resolution. The ecosystem of prince William sound extends seamlessly to connect with the copper river, Martin river and Bering river areas.

This area extension is long overdue.

It's clear to anyone who lives and works within these interconnected ecosystems that there isn't some hard line that protects the delta areas east of PWS from effects like an oil spill in PWS. These areas need protection and consideration.

Thank you for the opportunity to comment,
Mark Hazeltine

Lloyd Miller

I oppose resolutions A, B and C, and while resolution D is less objectionable, I believe the optimal approach would be to place these funds into endowments for the benefit of communities in the spill zone in perpetuity. To achieve this goal I support moving the remaining trust funds to the Alaska Community Foundation, consistent with the report "A New Vision for EVOS."

I am an attorney and represented the Alaska Native Class in the EVOS state and federal litigation. I also served as state and federal court-appointed Plaintiffs' Liaison Counsel in that litigation. However, these comments are my own and not to be attributed to any current or former clients.

Ky Osguthorpe

I have been commercial fishing for three years now—two years in the Bering River area. I studied ecology in college. The level of biodiversity in the proposed Area of Interest isn't seen anywhere else that I've been. To address the area and the corporate-induced crisis (oil spill) in any way that is not holistic, that does not incorporate an ecosystem- and watershed-based response is to admit to valuing the profit of a handful of corporate-owning non-locals over the folks who rely on the health of the area. I support resolution 20-D.

Stanley (Jeep) Rice

If the geography of the area is expanded, then projects would be under pressure to expand, thus requiring increases in funding or decreases in the number of projects. This concept would alter the strategy in place for the previous 10 years, and would not likely be compatible with legacy studies that were initiated immediately after the spill, thus losing the scientific power of the long-term legacy data sets. The current language in the amendment is loosely written and lacks detail in defining "...except under limited conditions...". Without more explicit language here, it would lead to farfetched and unwarranted use of EVOS funds in the future. This would seem to destabilize the long-term monitoring approach, open the door to political moves to change the approach.

If the language is changed specifically for habitat protection, the argument might have more legitimacy; but again, the vague language should be much more specific and limiting as habitat funds have limitations on amount also. A close tie to PWS/spill area should still be a requirement.

Ellen Zito

Please extend the boundaries of the restoration area to include the whole delta!

Stephen Lewis

I support the resolution D proposal to expand the area covered by the Council to incorporate an ecosystem boundary methodology. When I served on the Trustees Public Advisory Committee in 2002 I observed that the artificial boundaries defined by the affected area approach precluded valid proposals in both the restoration and protection aspects of the Council mission. Resolution D would allow greater participation in the objectives of the council.

Please pass resolution D.

Jeremy Robida

I support Draft Resolution 20-D. Fish, birds, orcas, etc do not see political boundaries. Restoration works should take a similar approach. Thank You.

Ann Rothe

Please see attached letter (also submitted as comments for Resolution A). It includes comments for all four resolutions.

Exxon Valdez Oil Spill Trustee Council
 4230 University Drive, Suite 220
 Anchorage, AK 99508-4650

RE: Draft Resolutions for Management of the EVOS Trust

Council Members:

This is in response to your call for public comments on the Council's draft resolutions regarding management of the EVOS Trust that were presented at your October 14, 2020 meeting. At the same meeting, you were presented with a plan, "New Vision for EVOS", to create an endowment with the remaining EVOS Trust funds that would provide continuing long-term support for research and habitat protection in the EVOS impact area. I think the creation of an endowment to continue the purpose and mission of the EVOS Trust should be pursued before you take further action on the draft resolutions. The intent of the draft resolutions seems to be to spend the balance of the Trust funds as expeditiously as possible without considering how best to extend the benefits of the Trust.

Together, the draft resolutions appear to limit public participation, project reporting, fiscal management accountability and overall transparency while at the same time expanding the scope of restoration activities to promote research and habitat acquisition outside the spill impact area. There's very little information provided within each of the resolutions or within the supplemental materials to explain why these resolutions are being proposed or justified.

The primary reason being offered for Draft Resolutions A, B and C is to provide the Council with more flexibility, but there is no reason being offered to explain why the current procedures are too confining or the proposed changes are necessary. As such, the resolutions are not in keeping with the purposes of the Restoration Plan, which provides for public participation, timely access to restoration information for the public and scientific community, and annual status reports on the condition of injured resources and services. Moreover, the resolutions are not in keeping with the intent of the 1991 Memorandum of Agreement and Consent Decree between the United States and State of Alaska.

Draft Resolution A is particularly troubling. It significantly reduces the opportunity for the public to participate in the restoration process, and it reduces transparency and accountability. It doesn't meet the mandate of the Memorandum and Consent Decree which requires meaningful participation in the restoration process. And eliminating the Council's annual meeting contravenes Council members' public trust responsibilities

I don't understand why Resolution D is necessary. The supplemental information for Resolution D is neither clear nor compelling. The current language in the Restoration Plan regarding location of restoration actions appears to already provide for an ecosystem approach to decisions regarding restoration activities. It offers enough flexibility to approve restoration and monitoring activities outside of the spill impact area while at the same setting stringent guidelines for how decisions regarding these activities should be made. Even though more than thirty years have passed since the oil spill, there are still fish, wildlife and habitats—and the human activities they sustain—that have not recovered within the area directly impacted by the spill. The existing guidelines in the Restoration Plan regarding location of restoration actions ensure that restoration and monitoring activities remain focused primarily on the spill impact area.

I don't believe the proposed resolutions advance the purpose of the EVOS Trust nor are they in keeping with the intent of the Memorandum and Consent Decree. However, I think the creation of an endowment for the remaining Trust funds would serve the purpose and intent of the Trust. I recommend that the Council postpone any further action on the draft resolutions and re-examine the concept of endowing the balance of the Trust funds as proposed in the "New Vision for EVOS".

Thank you for your time and consideration.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Ann Rothe', with a long horizontal flourish extending to the right.

Ann Rothe

David Irons

Dear EVOSTC,

Thank you for the opportunity to comment on your 2020 Draft Resolutions. I have worked in Prince William Sound (PWS) since 1983 as a biologist. I have studied many aspects of seabirds and sea otters. I was part of the huge team to investigate the effects of the EVOS, I also have a long-term project investigating seabirds and the causes of population change including climate change.

When the EVOS happened I was devastated, along with most the people in Alaska. Now, 31 years later I see how the EVOSTC was able to help recover and to learn an incredible amount about so many species and aspects of the PWS ecosystem. I fully support the work of the EVOSTC.

Option A

I support removing the requirement for an annual meeting to approve long-term projects and I support reducing reporting requirements to every three years for long-term projects.

Option B

I agree that it is not necessary for the Trustee Council to re-approve funding annually for such multi-year projects and that eliminating the annual review and approval procedure for multi-year projects will reduce administrative burdens on the Council.

Option C

I support the continuation of The Council's decision in the March 1, 1999 Resolution to allocate and manage the remaining joint trust funds in two sub-accounts as follows: (1) \$55 million of the remaining funds on October 1, 2002 to be managed as a long-term funding source for small parcel habitat protection, including habitat acquisitions; and (2) the remaining balance of funds on October 1, 2002 to be managed to fund annual work plans that include a combination of research, monitoring, and general restoration.

I do not support the Trustees transferring the joint trust funds from the Alaska Department of Revenue, Division of Treasury to the NRDAR Fund.

Option D

I do not support Option D of the Draft Resolution until all species and habitat are 100% recovered in the spill area as previously defined by the EVOSTC.

Sincerely,

David Irons, PhD.

Dune Lankard

An ecosystem approach is what the ocean needs from the Exxon Valdez Oil Spill Trustees

My name is Dune Lankard (Jamachakih). I am an Eyak Native fisherman and ancestral stakeholder from the Copper River Delta (Delta) and Prince William Sound (Sound). Our ocean and wild salmon way of life allowed our Eyak people (dAXunhyuu) to make a decent living and feed our families and friends for thousands of years in this region. I spent my youth tendering in the Sound and on the Delta with my family. Then later on I commercial and subsistence fished my way into adulthood where I have continued to make a living in both the Delta and Sound.

I adamantly SUPPORT Resolution 20-D to amend the 1994 Restoration Plan and allow EVOS Spill Trust funding decisions to be made on an ecosystem approach.

Over the years, my family and fishing community endured and survived the 1964 "Good Friday" Earthquake that disrupted our lives and fishing way of life here in the entire region. Then, 25 years later, we lived through the 1989 "Good Friday" Exxon Valdez Oil Spill.

The Oil Spill hugely disrupted our fishing way of life, and now here we are 25-30 years later, the same Gulf of Alaska communities are dealing with the impacts of ocean acidification, ocean warming, and ocean rise followed by depressed salmon runs, smaller salmon and low seafood values. All of these compounding factors hurt our ability to survive. There is huge uncertainty for our future making a living from the sea.

Before Cordova was called Cordova in 1907, this tiny coastal fishing community in the eastern Sound was named Eyak, after our tiny, yet proud and once thriving Eyak Nation. Four (4) distinct tribes have historically inhabited and moved through this region (Eyak, Tlingit, Aleut and Chugach).

This region has had its share of immigrants passing through, and some settled here... First the Spaniards, then the Russians came, followed by American pioneers, who came through and decided to call our home their own. This is still Eyak land.

Then came statehood in 1959, and the Alaska Native Claim Settlement Act (ANSCA) in 1971 (that supposedly settled the "Indian Problem"). ANSCA made it so that multi-international oil companies could drill the oil (the life blood) from our ancestral lands and we Natives were forced to start and join Native corporations. Native corporations forced Alaska Native people to commercialize and monetize what had always been sacred, reciprocal relationships with the earth itself.

Industry and government promised there would be responsible development, that a spill of magnitude of the Exxon Valdez would never happen. If spills ever happened, they said it would be cleaned up quickly. All promises were broken. So, now here we are over 30 years later, over half my lifetime, still dealing with the Exxon Valdez aftermath of the nation's worst oil spill at the time and petitioning and pleading for an ecosystem approach to restoration to help our impacted oceans recover.

For the record, this is still our ancestral Eyak land and our only home, as original inhabitants, tribal stakeholders and now share-holders of the land, where we each still have a voice and a vote in how

it should be managed, preserved and restored.

No Native corporation or government entity should or can define who we Eyaks are, let alone represent us or tell us what's best for us or our watershed ecosystem. Who has the right to draw lines in the sand to say where the reparation money from Exxon be spent? Who has the right to determine whether we should be inside or outside of a political restoration boundary? The 1994 Restoration Plan zone clearly discriminates against our Eyak people, our Delta land base and our wild salmon way of life. We have a right, as the original stewards and inhabitants, to tell you that our ancestral lands are connected from the Sound in the West to the furthest eastern edge of the Martin and Bering River Systems. The Restoration Boundary therefore should be drawn just east of the Bering and the Martin watershed boundaries.

Since their founding, ANCSA incorporated Native corporations have tried to convince every government agency (on municipal, state and federal levels) that they represent us, know what's best for us, and try to speak for us as you will read in their public comments. For the record, they do not speak for us Eyak people, nor do they represent us. We are not wards of the state or Native corporations, or corralled on some reservation. Only we can represent ourselves. We as sovereign Eyak people, are not represented by Native Village of Eyak, The Eyak Corporation or the Chugach Alaska Corporation, or any other entity.

The Eyak people of the Copper River Delta want to see the Exxon Valdez Oil Spill Trustees take an ecosystem approach for long-term restoration and mitigation in the spill zone and support active restoration, preservation and science that can actually help our oceans. We want the restoration funds put to work in all our Native and coastal communities in the Exxon spill zone. That means investing in actual ocean restoration projects here in the Exxon spill zone. First and foremost, support permanently protecting the Bering River Coal Fields on the eastern Delta.

The long-term vitality of interconnected ecosystems like the Sound, Copper River and Bering River cannot be overstated in importance for Alaska's long-term economic future. You now have the power to make a decision that enhances this region's ability to provide a secure home for all five (5) of our impacted species of salmon.

Ensuring that the entire region has a better chance to recover from the Exxon Valdez oil spill will ultimately contribute to healthier communities and long-term economic prospects with regard to responsible ecological management.

When the Exxon Valdez spill happened, it happened to all our tribes and all our ancestral lands. The spill also impacted our Eyak people's wild salmon way of life, which is our lifeblood and our right to survival. Our last known Eyak village site in eastern PWS was in Simpson Bay in a place called "Hole in the Wall." We traded, bartered and fished out in the Sound on Hinchinbrook at Nuchek as well as the Delta, till the fish traps wiped out all our salmon runs and displaced our tribes.

The Exxon spill impacted our Eyak community, it harmed our lands, culture and spirit, and continues to impact the ocean that we all claim to care about. This issue shouldn't be about Native corporations or the science community fighting for control of what's left of the restoration fund.

We certainly cannot transfer the remaining restoration funds to a private non-profit entity that has zero experience in environmental restoration and won't take public comments after five (5) years. How can this even be a restoration consideration or an option?

The concern should be how to best utilize the remaining restoration funds and doing the most good

in the shortest amount of time to restore and mitigate the damages done by the spill.

Our love for the ocean is what should unite us all to protect and preserve what is left of the wild and help our ailing fisheries, wildlife and oceans find a reprieve and fully recover.

By taking a true ecosystem approach and extending the current restoration boundary to include the Copper River Delta, is critical to our continued survival in these unique and irreplaceable lands and ocean, that we all happen to depend on for our existence.

While the Copper River Delta is still roadless and wild along this northwestern end of the coastal temperate rainforest in the Gulf of Alaska, by working together we can protect it and keep it that way, rather than end up like other over developed wild salmon watersheds in America. Regardless of what some believe, say or print... the Copper River Delta and the Prince William Sound are one ecosystem, one ocean, one region and one community. One without the other, we will cease to survive, let alone thrive during these global pandemic and climate changing times.

Pristine intact watersheds like the Copper River and the Bering River bring essential ecosystem services to coastal Alaskan communities. Native Peoples, in particular, rely on these services for their food security, local economy, and cultural survival.

I cannot support Resolution 20-A or 20-B, as both disregard an integral component of an ecosystem approach, which is the public. Resolution 20-C betrays the balance between habitat and research that was established long ago.

The Exxon Valdez Oil Spill Restoration Boundary should be expanded to encompass and protect the entire Copper River Delta region, including the Bering River Coal Fields, because it is the right thing to do and it makes the most ecosystem sense.

The Delta and the Sound nourish the same species, as well as exchange massive amounts of nutrients, sediment, and water on a regular basis. That Restoration Boundary should be drawn just east of the Bering and the Martin watershed boundaries.

As Native people, commercial fishermen, local subsistence users, gatherers and harvesters, recreational boaters, hunters and sport fishermen, we all depend on these deeply interconnected, pristine abundant waterways. We ask the EVOS Trustee Council to adopt Resolution 20-D to extend the Restoration Boundary to include the entire Copper River Delta in your restoration plans going forward.

AwA'ahdah (thank you),

Dune Lankard
Executive Director, Native Conservancy

P.O. Box 456
Cordova, Alaska 99574
PH: 907.952.5265

Dune is an ancestral Eyak Native inhabitant from the Eagle Clan in the Copper River Delta, his Eyak name is Jamachakih which means, "Little Bird that screams really loud and won't shut up." Dune is a tribal member of the Native Village of Eyak Traditional Council, a shareholder of both The Eyak Corporation and the Chugach Alaska Corporation, he is a business owner, fisherman,

kelp farmer and land owner on Eyak Lake and a proud dad of Ananda Rose Ahtahkee Lankard and Dune has started several local, regional and national non-profits since the Exxon spill.

EVOS Trustee Council

RE: Draft Resolutions 20-A, 20-B, and 20-D

The Alaska Public Interest Research Group (AKPIRG) is writing to express our support for Draft Resolution 20-D and our opposition to Draft Resolutions 20-A and 20-B as proposed by the Exxon Valdez Oil Spill Trustee Council.

AKPIRG, established in 1974, advocates on behalf of public and consumer interests. To our knowledge, we are the only non-governmental organization focused on addressing Alaska-specific consumer interest issues.

The long-term vitality of interconnected ecosystems like the Copper and Bering River cannot be overstated in importance for Alaska's long-term economic future. Ensuring the region has a better chance to recover from the Exxon Valdez oil spill will ultimately contribute to healthier communities and long-term economic prospects with regard to responsible ecological harvesting.

While AKPIRG fully supports the approval of Draft Resolution 20-D to incorporate an ecosystem approach to the oil spill boundary, we are wholeheartedly against the adoption of Draft Resolution 20-A and Draft Resolution 20-B, both of which disregard an integral component of an ecosystem approach: the public.

The Trustee Council's ability to make well-informed decisions is impeded by the elimination of annual public meetings, changes to its reporting schedules, and the changes to procedures regarding multi-year projects, especially with the adoption of Draft Resolution 20-D, which extends restoration boundaries.

The 1991 Memorandum of Agreement and Consent Decree between the United States & the State of Alaska, approved by the US District Court, requires "meaningful public participation" in all aspects of the Restoration program.

Resolution 20-A would make it considerably more difficult for the public to remain actively engaged in the Restoration program. Eliminating annual review of multi-year projects, as proposed in Resolution 20-B, would make it considerably more difficult for the public to remain actively engaged in the Restoration program.

At a time when more people, wildlife, and habitats are impacted by the Exxon Valdez Oil Spill Trustee Council's restoration efforts, a healthy and robust ecosystem approach requires more opportunities for meaningful public involvement and the public's interests in its schedules of annual meetings and reporting – not less.

AKPIRG believes it is in the public's best interest that Draft Resolution 20-D be adopted by the Trustee Council, and for Draft Resolutions 20-A and 20-B to be tabled.

Sincerely,

A handwritten signature in black ink, consisting of a large 'V' followed by a stylized, looped signature.

Prince William Sound Stewardship Foundation

EVOS Trustee Council:

The Prince William Sound Stewardship Foundation appreciates this opportunity to comment on these Draft Resolutions.

Established in 2017, PWSSF is the only nonprofit organization solely focused on ground-level conservation work within Prince William Sound, primarily in western PWS which is ground zero for the most serious immediate and continuing oil spill impacts. Our all-volunteer board of directors consists of water taxi and tour company owners, land management professionals, educators, and others from the Prince William Sound region. We work closely with the agencies charged with caring for the Sound – including the U.S. Forest Service, Alaska State Parks, NOAA, and others – and with businesses, nonprofits, and volunteers to create a coordinated approach to conservation work in the Sound. Our projects include removing marine debris from beaches, treating invasive species, site restoration, maintaining public trails, providing public education, and other work that directly benefits spill-area resources, including the Wilderness Study Area injured resource.

We support Draft Resolution D, which would eliminate restrictions on funding Restoration projects outside the existing oil spill boundary. The 1994 Restoration Plan spill boundary was established arbitrarily and without scientific support, and was not a requirement of the 1991 Consent Decree. Instead, we encourage the Trustee Council to pass this Resolution D as an ecologically sound decision which recognizes the functionality of affected ecosystems. For example, the eastern boundary line, a straight line which has no functional corollary in the ecosystem, and the southwest boundary, both leave out areas which are clearly integral to ecosystems which are within the existing spill boundary. Resolution D will allow the Trustee Council to conduct activities where it is necessary to the Restoration of the entire spill region.

Thank you for this opportunity to comment on these important Resolutions which will have long-lasting effects on Prince William Sound and the greater oil spill region. We appreciate your consideration.

Heather Thamm
President, Board of Directors
Prince William Sound Stewardship Foundation

Wildlife Forever

On behalf of Wildlife Forever, our Board of Directors, members, and coalition supporters, I would like to emphatically support Resolution 20-D and strongly encourage the Trustee Council's ecosystem approach to include the entire Copper and Bering River Watershed. Few places in our increasingly developed world contain the diversity, quality, and quantity of natural treasures as do the Copper River and Bering River watersheds. This is a global resource needing the utmost conservation and protections to ensure viability for the people of Alaska and future generations.

Please find attached letter of support signed by Wildlife Forever and other national organizations recommending the adoption of Resolution 20-D. Thank you for your service to ensure the future of America's fish and wildlife.

Re: Public Comment in Support of Adoption of Resolution 20-D

Dear Members of the Trustee Council:

Wildlife Forever and the undersigned organizations representing millions of sportsmen and women have supported the work of the Exxon Valdez Oil Spill Trustee Council toward comprehensive oil spill restoration since the 1990s and strongly support the achievements of the Council in habitat conservation and scientific research. As we will explain in these comments, we support the Trustee Council's adoption of Resolution 20-D.

In 2010, twenty-six partner organizations, representing millions of hunters, anglers and outdoor enthusiasts, commented in support of the Trustee Council's preferred alternative in the Supplemental Environmental Impact Statement on the Exxon Valdez Oil Spill (EVOS) Trustee Council's Restoration Plan and urged the Council "to stay the course on habitat conservation with remaining oil spill settlement funds."

In 2016, these members also signed a letter asking the Trustee Council "to evaluate the merits and link-to-injury of conserving the fish and wildlife, their habitats, coal, timber and other natural resources on...private inholdings located within the Copper River Watershed and contiguous to the Chugach National Forest and the Bering Glacier Research

Natural Area.”

In February 2020, twenty-nine conservation organizations wrote a letter to “strongly support the Trustee Council’s willingness to consider and negotiate a purchase offer with the Korea Alaska Development Corporation for their Bering River inholding in the Chugach National Forest’s Copper River Delta region.” That sign-on letter also endorsed the U.S. Forest Service’s current management plan for the Copper River Delta.

This public comment letter applauds the Trustee Council’s seeking of public comment on Resolution 20-D that would amend “the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary” and thereby allow for the spending of Exxon Valdez oil spill habitat conservation funds to acquire the South Korean-owned remaining unconserved 11,000 acres Bering River coal field.

We the undersigned groups applaud the Council’s wise use of an ecosystem approach and your recognition that the Copper River Delta region overlaps with Prince William Sound ecosystem wherein numerous Exxon Valdez oil spill injured species and associated natural resources are found, and where human services such as public hunting, fishing, subsistence, and commercial fishing take place.

In conclusion, we note that the Alaska Department of Fish and Game’s (ADF&G) Game Management Unit 6 includes both the Copper River Delta and Prince William Sound as one management area, and ADF&G’s commercial fishing management includes Prince William Sound and Copper River in one management area. We strongly believe that the Exxon Valdez Comprehensive Plan should endorse the State of Alaska’s approach that logically treats these two areas as combined ecosystems for optimum fish and wildlife management purposes.

Thank you for the Trustee Council’s decades of achievement in Exxon Valdez habitat restoration actions and for your thoughtful consideration of this public comment urging Resolution 20-D’s adoption.

Sincerely,

December 9, 2020

EVOS Trustee Council
4230 University Drive, Ste 220
Anchorage, AK 99508-4650

Dear EVOS Trustee Council Members,

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the "New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill" proposal submitted by the EVOS Think Tank of Citizens.

The Native Village of Port Lions understands that the following four draft resolutions, if approved, would continue current "spend down" efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council:

1. Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules;
2. Draft Resolution 20-B: Change to procedures for approval of multi-year projects;
3. Draft Resolution 20-C: Combining habitat and research sub-accounts; and
4. Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

The Native Village of Port Lions is writing in support of the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Chugach Region communities, including those represented by this letter, were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources, the effects of lingering oil and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the above resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Thank you for your consideration.

Sincerely,

Nancy Nelson, President

Copper River Watershed Project, Inc.

The Copper River Watershed Project submits public comment in support of Resolution D. The Copper River Watershed Project promotes a salmon-rich, intact watershed and culturally diverse communities by forming partnerships for watershed-scale planning and projects. The Copper River Watershed Project was born of deep concern for the region's resources and the economies dependent on those resources. We strive to support the community values of Copper River watershed residents in our efforts to foster sustainable economic development. Further, two of the top concerns for residents within the watershed are access to subsistence gathering and thriving fish and game populations for commercial, subsistence and sport harvest/use.

The current spill area boundaries exclude portions of watersheds that are ecologically connected to the spill area and play an important role in recovery, such as the estuary at the mouth of the Copper River. The Copper River is the most diverse watershed with regards to salmon habitat and hosts increased densities of known salmon populations. For example, the density of Chinook salmon in the Copper River rivals the larger Kuskokwim River and sockeye salmon are even more densely distributed in the Copper River than in Bristol Bay. (State of Alaska's Salmon and People, 2020). Though this is likely known to the EVOS Trustee Council, it is mentioned to remind the council of these essential natural resources and to consider an ecosystem approach for setting the spill boundary. The Copper River Watershed Project supports Resolution D as we are concerned that by not taking into account cross-disciplinary assessments of current and potential future damaged resources associated with oil spills, the Copper River becomes vulnerable to destructive activities not fitting with sustainable economic development.

As drawn, the current spill boundaries are also not consistent with the 1994 Restoration Plan which contains multiple statements that support an ecosystem approach such as: "Restoration should contribute to a healthy, productive and biologically diverse ecosystem within the spill area that supports the services necessary for the people who live in the area." This resolution would help to make it clear that restoration and recovery requires an ecosystem approach and supports innovative and cross-disciplinary approaches to conserving our resources.

Thank you EVOS Trustee Council for your work supporting this region.

Most sincerely,

Lisa Docken, Executive Director, Copper River Watershed Project

Eyak Preservation Council

I fully support and approve Resolution 20 D. This quote from the Resolution speaks clearly to the facts, science and wisdom of extending the oil spill restoration boundary and the scope for restoration and conservation decisions made by the EVOSTC.

"The available science has consistently pointed to a broader ecological footprint attributable to the spill than is represented by the currently defined spill area. For example, the Alaska Department of Fish and Game has shown red salmon in Prince William Sound are derived from natal streams as far away as the Copper and Bering Rivers..."

Include the entire Copper River Delta east of river right of the Copper River, the connected ecosystems of the watersheds of Katalla, the Bering River and Controller Bay, and the Bering River Coalfields.

Global demands for coal are not diminishing; they are increasing. From CarbonBrief.org, March 2020: "...China Electricity Council, are lobbying for targets that would allow hundreds of new coal-fired power stations to be built. And a recent update ... signaled further relaxation of permitting." From Reuters, June, 2020: "...China has nearly 250 gigawatts (GW) of coal-fired power now under development..."

Mining in this region would endanger the entire ecosystem of interlacing Bering and Copper River wetlands and old-growth forests. These ecosystems provide climate stabilization, water purification, and vast spiritual and cultural benefits, allowing Native peoples to practice their traditions. The economic benefits of this entire region and ecosystem are rejuvenating and help feed the entire state and the benefits are felt worldwide.

To prevent any and all further potential ecological damages must be inherent in the EVOSTC decision making. To take restoration measures in these areas that were and still are impacted by the Exxon Valdez oil spill must be included in the scope of the EVOSTC mission's work.

As the Executive Director of the Eyak Preservation Council I have been honored for over the last 25 years to experience the replenishment and amazing resilience of the wild salmon, the animals, waters and our ever-giving ecosystem. We all know climate change and ocean acidification are challenging these ancient integrated systems. We need to jump forward together as a populace to help protect and sometimes mitigate, these challenges.

Resolution D is a resounding and courageous move in a correct and visionary direction.

Carol Hoover

EVOS Trustee Council
 4230 University Drive, Ste 220
 Anchorage, AK 99508-4650

Subject: Resolutions 20-A, 20-B, 20-C, 20-D Approved for Public Comment at the October 14, 2020, meeting of the Exxon Valdez Oil Spill Trustee Council

Dear EVOS Trustee Council Members:

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the "New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill" proposal submitted by the EVOS Think Tank of Citizens. With this as background, Afognak Native Corporation submits the following comments on Resolutions 20-A, 20-B, 20-C, and 20-D.

Afognak Native Corporation is not in support of Resolution 20-A. Access to the Trustee Council by the public is fundamental to the process set out in the consent decree. Eliminating an annual Trustee Council annual meeting and annual public input into the funding process weakens the ability of the Council to hear directly from those with local knowledge about any continued spill impacts in their respective community or region. Further, removing the public process leaves the public with the impression that its input is not welcome or valuable and fosters an environment of mistrust. Rather than taking this approach, Afognak Native Corporation encourages the Trustee Council to enhance and increase its opportunities for public participation in the Council's activities.

Afognak Native Corporation is not in support of Resolution 20-B. The review and approval of the annual funding in a public meeting requires the project administrators to request adjustments and provides the public with opportunity to monitor progress on projects of interest. In addition, an annual review and approval process allows the Trustee Council to continuously evaluate the ongoing validity and benefit of projects.

Afognak Native Corporation is not in support of Resolution 20-C. There are still opportunities for utilization of both the Research and Habitat accounts. Although over thirty years have passed since the oil spill, there are still species that have not fully recovered and ongoing research on the recovery of these species and research on all aspects of the ecosystem in the spill impacted area are and will continue to be relevant. In addition, the human services impacted by the oil spill have not yet recovered. There are critical projects and services that can help commercial fisheries, tourism, and subsistence recovery within the spill impacted region that could benefit from EVOS funding. There are also more than 250,000 Alutiiq artifacts being held at the Alutiiq Museum in Kodiak, most of which were negatively impacted by the oil spill, that will need continued care and preservation.

Afognak Native Corporation is not in support of Resolution 20-D. This resolution would remove the limiting conditions that must exist for the Trustee Council to approve restoration activities outside the boundaries of the defined spill area. While Afognak Native Corporation recognizes that many marine and terrestrial species move from the spill impacted area to areas not impacted, we believe that funding of activities and projects be constrained to the defined spill area. Furthermore, any funding of activities outside the boundary of the defined spill area should be very limited, have clearly delineated requirements and be subject to public input. The oil spill devastated many communities and species in the defined spill area while at the same time, the oil spill stimulated the economy of communities outside the defined spill area by providing jobs and revenue in the clean-up effort. The trauma from the oil spill is still felt in the defined spill area, and the focus of funding activities and projects needs to remain in that area.

Afognak Native Corporation understands that the four draft resolutions, if approved, would continue current "spend down" efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council. Afognak Native Corporation disagrees with this approach. Instead, Afognak Native Corporation supports the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. Afognak, Port Lions, and other communities in the Koniag region, along with commercial and subsistence fishermen and resources were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources and continued reverberations from the human and economic impacts of the spill. Residents still discuss the trauma of the oil spill in ways very similar to the devastation of the 1964 earthquake and tsunami. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the four resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Sincerely,

A handwritten signature in black ink, reading "Malia Villegas". The signature is fluid and cursive, with the first name "Malia" and last name "Villegas" clearly distinguishable.

Dr. Malia Villegas
Vice President of Community Investments
Afognak Native Corporation

Tangirnaq Native Village (Woody Island Tribe)

Dear EVOS Trustee Council Members,

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the "New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill" proposal submitted by the EVOS Think Tank of Citizens.

Tangirnaq Native Village (aka Woody Island) understands that the following four draft resolutions, if approved, would continue current "spend down" efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council:

1. Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules;
2. Draft Resolution 20-B: Change to procedures for approval of multi-year projects;
3. Draft Resolution 20-C: Combining habitat and research sub-accounts; and
4. Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

As President of the Woody Island Tribal Council, I am writing in support of the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Koniag Region communities, including those represented by this letter, were devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources, the effects of lingering oil and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the above resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Thank you for your consideration.

December 15, 2020

EVOS Trustee Council

Anchorage, AK 99508-4650

RE: Letter of Opposition to Draft Resolutions 20-A, 20-B, 20-C, and 20-D

Dear EVOS Trustee Council Members,

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the “New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill” proposal submitted by the EVOS Think Tank of Citizens.

Tangirnaq Native Village (aka Woody Island) understands that the following four draft resolutions, if approved, would continue current “spend down” efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council:

1. Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules;
2. Draft Resolution 20-B: Change to procedures for approval of multi-year projects;
3. Draft Resolution 20-C: Combining habitat and research sub-accounts; and
4. Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

As President of the Woody Island Tribal Council, I am writing in support of the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Koniag Region communities, including those represented by this letter, were devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources, the effects of lingering oil and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the above resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Thank you for your consideration.

Sincerely,

Gwen Sargent, President, Woody Island Tribal Council
Tangirnaq Native Village (aka Woody Island)

Stand for Salmon

Thank you for the opportunity to provide comment on this important issue. Stand for Salmon represents thousands of Alaskans and supporters across the nation who care deeply about the future of Alaska's salmon resources and the habitat they depend on. Stand for Salmon and several of our allies in the commercial fishing sector, including the Salmon Habitat Information Partnership wish to submit the attached comments on behalf of our supporters. Thank you again for this opportunity.

Ryan Schryver
(On behalf of Stand for Salmon and our allies)

Dear Decision Maker,

To ensure the long-term health of Alaska's salmon, our fisheries and the communities who depend on clean water, I support resolution 20-D, which will ensure the health of the interconnected Prince William Sound ecosystem. Taking a full ecosystem approach will ensure this economically, biologically, and culturally significant resource will remain intact for future generations of Alaskans.

Sincerely,

Kaden Addler

Re: Comment on Draft Resolutions

Dear EVOS Trustee Council Members,

Kodiak Regional Aquaculture Association (KRAA) is the regional non-profit salmon enhancement entity operating in the Kodiak Archipelago in support of the Kodiak salmon fishery—the whole of which occurs in the spill area. KRAA generates revenue through Salmon Enhancement Tax revenues paid by Kodiak salmon fishermen and through implementation of cost recovery fisheries. We operate two hatcheries, produce all 5 species of Pacific salmon, and have numerous, ongoing salmon research, monitoring, and enhancement projects throughout the Archipelago. Protection of the marine environment is critical to our success.

We appreciate the EVOS Trustee Council’s solicitation of public comment on four draft resolutions to be considered by the Council. After review of these resolutions, KRAA opposes all four. KRAA believes the EVOS Trustee Council should be restructured along the lines of the “New Vision of EVOS” as proposed at your October meeting. We believe the remaining EVOS Trustee Council funds should be used to create an endowment and assure the funds are spent within the spill-affected regions. KRAA is disturbed by the administrative “pass through” costs extracted from the fund by both the State and Federal governments. It’s time to reduce administrative costs to the 7.5% envisioned by the proponents on the “New Vision” plan and provide a transparent public process for annual distribution of EVOS Trustee Council endowment grants.

Draft Resolution 20-A (Eliminate Annual Meeting etc.) First, this would only make sense if the fund were extinguished. As long as there is money to allocate and an administration to oversee there is need for an annual Trustee Council meeting. The EVOS fund is too large, and the needs for restoration and habitat in the spill area are too great, to put the whole operation on auto pilot. Moreover, it is KRAA’s view that such a decision would violate the “public trust” that was implied by the State of Alaska when it settled with Exxon. All residents in the spill area understood that part of the settlement was for State and Federal Trustees to directly and carefully manage the EVOS fund. Eliminating public meetings is not careful management or, really, management at all.

Draft Resolution 20-B (Funding Multi-Year Projects) It is KRAA’s understanding that funding multi-year projects has long been part of the EVOS Trustee Council’s operational practice. However, long term projects and their continued funding are reviewed on an annual basis. Once again KRAA’s vision for the

future of the Trustee Council is for the Council to have oversight of spending and maintain project accountability. Consequently, long term funding should only occur in the context of annual review and assessment. Once again, KRAA believes passing this resolution is a step in the wrong direction.

Draft Resolution 20-C (Combine habitat and research sub-accounts) KRAA is particularly concerned about the proposed combination of specific sub-accounts. It's our view that the EVOS fund and Trustee Council was created to be prepared for unknown and/or unexpected contingencies--contingencies that may create spending needs in either habitat or research spheres. If the two sub-funds are combined, especially in the context of a spend-down, it's possible that money needed for one set of issues, like habitat, will not be available given parallel research needs. KRAA does not see combining the sub-accounts as an acceptable risk.

Draft Resolution 20-D (Expand boundaries incorporating an eco-system approach) It would be interesting to see the geographical boundaries envisioned by those supporting the eco-system funding approach resolution. KRAA's understanding of the resolution is that it would be an expansion of EVOS spending throughout an area that could reach from California to Russia and, perhaps, as far east as Japan. For example, some portion of chum salmon returning to Prince William Sound migrate through the Bering Sea. Salmon nutrition in the Bering Sea depends, in part, on water temperatures. Water temperature is directly related to the polar ice cap. Consequently, an eco-system approach for Prince William Sound chum salmon could justify EVOS research spending to assess the Bering Sea Ice edge. While interesting and needed, researching Bering Sea ice is NOT what was envisioned--neither by those that settled the State and Federal claims with Exxon, nor is it supported by stakeholders in the spill area, including Kodiak Regional Aquaculture Association.

When the EVOS Trustee Council meets in January to review these four resolutions, Kodiak Regional Aquaculture Association requests that you reject all four resolutions. We believe the EVOS Trustee Council should take a step back and envision a new path forward. Remaining EVOS funds can provide research and habitat restoration within the spill area in perpetuity. The endowment approach seems the best tool to accomplish this goal. KRAA's view is that an endowment would be a WIN for all involved.

Thank you for your consideration of Kodiak Regional Aquaculture Association's comments.

Very truly yours,

Tina Fairbanks

Ste. 220
Anchorage, AK 99508-4650

RE: COMMENTS OF PROPOSED RESOLUTIONS 20-A-D

Dear Ms. Hsieh:

Cook Inletkeeper is a community-based organization formed by Alaskans in the wake of the *Exxon Valdez* oil spill, and dedicated to protecting the Cook Inlet watershed and the life it sustains. Please accept these brief comments on behalf of Inletkeeper and its more than 8500 members and supporters throughout southcentral Alaska.

As a threshold matter, the proposed resolutions – especially Resolutions A-C – lack the detail, background and rationale needed for Alaskans to understand the issues implicated and to comment meaningfully on them.

Accordingly, we strongly oppose proposed Resolutions 20-A, 20-B and 20-C because they appear to undermine public engagement and involvement as required by federal law and court-approved documents.

Inletkeeper strongly supports Resolution 20-D to allow the Council to move beyond the artificial boundaries of the spill-affected area and to take an ecosystem approach to its important work.

Thank for considering these comments and please do not hesitate to contact me if you have any questions.

Yours for Cook Inlet,

Bob Shavelson
Inletkeeper

Native Conservancy

Dear Trustees,

Please see the attached letter from Native Conservancy.

Thank you very much.

December 16, 2020

Dear Commissioner Brune, Commissioner Vincent-Lang, Attorney General Sniffen, Regional Forester Schmid, Regional Administrator Balsinger, and Senior Counselor Renkes,

Native Conservancy strongly approves Resolution 20-D. Our organization, Native Conservancy, was established in 2003 to empower Alaska Native Peoples to permanently protect and preserve endangered habitats on their ancestral homelands. Eyak ancestral homelands include Alaska's Copper River Delta all the way to eastern Prince William Sound. Our lives changed forever on the day of the Exxon Valdez Oil Spill in 1989, which spewed over 11 million gallons of crude oil into waters and onto 1,500 miles of our pristine beaches.

As a non-profit organization, we strive to maintain and secure land titles to Native lands in conservation trusts to strengthen our inherent rights of sovereignty, subsistence and spirituality. Native Conservancy is a 501(c)3 charity organization based in Cordova/Eyak. Our mission is to create resilient futures for Indigenous Peoples by preserving, repatriating and restoring ancestral homelands, traditional food sources and subsistence practices to revitalize Native culture, habitat, health and spirituality.

Native Conservancy, led by lifelong Eyak fisherman, Dune Lankard, enthusiastically supports Resolution 20-D. Extending the Restoration Boundary to encompass the entire Copper River Delta region, including the Bering River Coalfields, is the most logical and ethical thing to do. The Restoration Boundary extension is extremely important for economic, ecological, and cultural reasons. Scientific research has repeatedly proven that taking an ecosystem-approach to restoration and preserving equivalent pristine habitat is the most promising way to effectively recover threatened species and restore balance to damaged ecosystems.

The Exxon Valdez Oil Spill on March 24th, 1989, devastated our ancestral homelands and waterways in Prince William Sound, along with our animal relatives and wild salmon way of life. Native Conservancy is rooted in ancient memories of deep blue water where wild salmon and silver shimmers of Pacific herring thrived together. In 1989, intergenerational memories beckoned to us to stand up and fight for our way of life from beneath the black oil sheens of the Exxon Valdez spill. Many of us call that catastrophic event "the Day the Water Died."

We have yet to recover from that oil spill over 30 years ago, because four critical species, including our Pacific herring are endangered, and half of our most heavily impacted animal relatives have not fully recovered. Some of those animals, like Pigeon Guillemots, Marbled Murrelet and the AT-1 local killer whale pod migrate thousands of miles, making a living through Prince William Sound and the Copper River Delta.

We all know that the Copper River Delta and Prince William Sound are connected and one living ecosystem. Protecting all of the connected critical habitats will maintain our life force and give the wildlife, the lands, the waters, and the local people the best possible chance at recovery.

According to the Alaska Department of Fish & Game, “Recovery will have occurred when the people of these communities have a strong and viable future that builds upon their past; a future they themselves must help to shape.” This recovery, this strong and viable future, that the Department speaks of, cannot happen without the EVOSTC taking precautionary ecosystem measures to prevent another industrial accidents from occurring in the region.

Native Conservancy, along with the Eyak Preservation Council and other aligned organizations in our region have been working for almost three decades to retire the Bering River Coalfields in order to protect the Copper River Delta’s fish and wildlife and the region’s world-renowned wild salmon subsistence and commercial fishing economies.

To date, we, including Chugach Alaska Corporation have helped conserve 85% of the Bering River coalfields (62,000 acres of subsurface title once held by Chugach Alaska Corporation) yet preserving the last 11,000 acres of the Bering River coalfield owned by the Korean Alaska Development Corporation (KADCO) is paramount to preserving the Copper River Delta, that helps the Prince William Sound to fully recover. The South Korean owners of the remaining Bering River Coalfields are willing to sell their private coal inholdings for conservation in perpetuity. To have EVOSTC financial help to protect this area is critical for full restoration to happen for the Sound, for our people and our future as stewards of our ancestral lands.

With the help of countless individuals and fishermen, businesses, government leaders including sportfishing and hunting organizations we have managed to increase the protections for essential waterways including the Copper River Delta, Martin River, Katalla River, Controller Bay, and most of the Bering River region. Now you as Trustees have the chance to secure the permanent retirement of the Bering River Coalfields to solidify a legacy of thriving wilderness intact and wildlife in this special region. Preserving this valuable, roadless, world-class baseline ecosystem helps almost every critter and wildlife impacted by the Exxon Valde oil spill.

Scientific literature demonstrates that following strip mining and mountaintop removal mining “restoration may often not be achievable, because of altered hydrology, habitat fragmentation, contamination, climate change, prohibitive costs and other environmental and socio-economic boundary conditions” (Lima et al., 2016). Mining in this region would desecrate precious and irreplaceable ecosystem services offered by the interlacing Bering and Copper wetlands, waterways and old-growth forests.

These sister watersheds at stake host hundreds of thousands of acres of old growth hemlock and spruce rainforests, and include critical habitat for wild salmon, millions of shorebirds, trumpeter swans and other waterfowl (designated a Western Hemisphere Shorebird Reserve Network Site of Hemispheric Importance), as well as eagles, brown and black bears, wolves, mountain goats, wolverines, moose, seals

and orcas. Extending the Restoration Boundary will have far-reaching benefits for commercial and subsistence fishermen as well as sport hunters and fishermen.

Thriving intact salmon watersheds like this are absolutely priceless and necessary to help our salmon come home every year, they are truly a renewable resource as long as we take care of their habitat. The region contains some of the finest wild salmon runs left on Earth, supporting remarkable fisheries, as well as lucrative hunting businesses and scientific research sites.

These ecosystems provide climate stabilization, water purification, and vast spiritual and cultural benefits, including allowing Native peoples to practice their traditions. It is an important cultural area for Alaska's Eyak, Tlingit, Chugach, Ahtna, and Alutiiq tribes, with an impressive network of historic villages and sacred sites that have Alaska Native place names and beautiful histories that are currently being revitalized. Future generations of Alaska Natives in this region deserve to know and continue to live in their ancestral homelands and have opportunities to hunt, gather, and fish in the pristine places stewarded by their ancestors.

Pass Resolution 20-D, and then support the retirement of the Bering River Coalfields in order to ensure strong and viable futures for the people and all the wildlife who are still recovering from the oil spill. Alaska Native communities will thank you. Subsistence, commercial and sport fishermen will thank you. Local families whose businesses rely on healthy fisheries will thank you. Use the power entrusted to you as the region's Trustees for the benefit of all our impacted stakeholders.

The time is now to do the right thing and manage this region with an ecosystem approach.

Thank you for this opportunity to comment on such an important matter,

A handwritten signature in dark ink, reading "Dune Lankard". The signature is fluid and cursive, with the first name "Dune" and last name "Lankard" clearly distinguishable.

Dune Lankard, on behalf of our esteemed team at Native Conservancy

P.O. Box 460
Cordova, Alaska 99574

Alaska Marine Conservation Council

To the EVOS Trustee Council,

The Alaska Marine Conservation Council is dedicated to protecting the long-term health of Alaska's oceans and sustaining the working waterfronts of our coastal communities. Our members include fishermen, subsistence harvesters, marine scientists, small business owners, and families. Our ways of life, livelihoods, and local economies depend on sustainable fishing practices and productive oceans.

Our work hinges upon the principles of ecosystem-based management, and as such we applaud Resolution 20-D which honors the richness, dynamism and connectedness of the entire Copper River Delta. The Copper and Bering River ecosystems are vital to the Gulf of Alaska and beyond. Particularly in light of changing ocean and estuarine conditions beyond human control, those intact watersheds and the lives that depend upon them cannot afford to suffer as a result of inaccurate boundaries or ineffectual parameters for relief.

We offer thanks to the Council for its diligent scientific review of the Exxon Valdez oil spill and for incorporating stakeholder insight into its decision-making.

Sincerely,

Marissa Wilson
Executive Director

10,000 years in our Traditional Homeland, Prince William Sound, the Copper River Delta, and the Gulf of Alaska

December 16, 2020

EVOS Trustee Council
4230 University Drive, Suite 220
Anchorage, AK 99508

Dear EVOS Trustee Council,

Thank you for the opportunity to comment on the draft resolutions the Trustee Council is considering. The Native Village of Eyak, like all of the inhabitants of the Spill effected areas, has been struggling this year with the effects of the Covid 19 pandemic. Our attention has been on basic needs of our community during this stressful time. Our citizens are reliant on our lands and waters for subsistence, and for our livelihoods. We still very much feel the effects of the Spill and understand the importance of the on-going restoration.

However, this year, we have not had the ability to hold the appropriate meetings and gatherings to hear from our citizens regarding these vast changes in the proposed resolutions before you. We would urge the Trustee Council to slow this process down, and allow more thoughtful, and meaningful engagement with the effected peoples, especially here in PWS.

We do not, at this time, have the ability to endorse any of the proposed changes to EVOS operating procedures and policies. We would hope that you do not adopt the changes without further discussion on a grass roots level, with the communities and Tribes effected.

On behalf of the Tribal Council of the Native Village of Eyak,

Mark Hoover, Chairman

Native Conservancy

Dear Exxon Valdez Oil Spill Trustee Council,

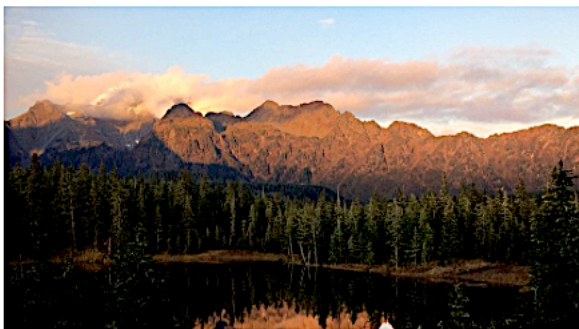

The attached PDF titled: "Petition Statement Approving Resolution 20-D" is the online statement that accompanies the two Petition PDFs titled "ResolutionDsignatures" and "ResolutionDcomments" that I sent at 4:46 pm Dec. 16. This PDF should be included as Page 1 in front of the signatures and comments. Every person who signed was supporting this statement by Dune Lankard and Native Conservancy.

Please note, to view the ongoing petition at Change.org, you can click: [SUPPORT THE EVOSTC RESOLUTION 20-D](#) (This is a live link with 5,260 signatures and still climbing.)

Thank you for including this attachment "Petition Statement Approving Resolution 20-D" as the cover for the signatures and comments PDFs I submitted two hours ago today, December 16, 2020.

We appreciate your understanding,

Support the Exxon Valdez Oil Spill (EVOS) Trustee Council's Resolution 20-D.

 **Native Conservancy** started this petition to **Exxon Valdez Oil Spill (EVOS) Trustee Council**

As a coalition of concerned citizens, we express our strong support for the Exxon Valdez Oil Spill (EVOS) Trustee Council's Resolution 20-D. We approve the extension of the Oil Spill Restoration Boundary, and ask that the new boundary encompass the entire Copper River Delta region, including the Bering River Coalfields, using an ecosystem approach.

Pristine, roadless watersheds like the Copper and the Bering bring essential ecosystem services to coastal Alaskan communities. Native Peoples, in particular, rely on these services for their food security, local economy, and cultural survival.

The Copper and Bering Rivers form a vast, contiguous wilderness – an immense wildlife corridor. These watersheds must be kept intact in order to support the annual returns of thousands of spawning salmon. Critical fish and bird species still in recovery from the 1989 Exxon Valdez Oil Spill migrate between the Delta and the Sound annually. These waterways function as one ecosystem, as thousands of animals travel between these connected habitats in order to survive.

Extending the Restoration Boundary and protecting all of the Copper River Delta will give the people, fish, and wildlife still impacted by the Oil Spill a fighting chance for full recovery and a viable future. It is the responsibility of this generation to protect the sacred homelands of the Eyak and Tlingit Nations for the future.

Approving Resolution 20-D will be a gift to your grandchildren.

AwA'ahdah (thank you),

Dune Lankard (Native Conservancy)

Lily Diamond	Kula, HI	2020-12-16	"This territory is land that the Eyak people have lived off of and cared for for thousands of years, and must be protected in order to preserve their very existence. Doing anything otherwise is an act of violent degradation against land and people."
LISBETH PELSUE	PORTLAND, OR	2020-12-16	"I'm writing to express my support for the expansion of passing Resolution D, to expand the Exxon Valdez Oil Spill Restoration Boundary to incorporate an ecosystem approach and include the entire Copper River Delta. Prince William Bay and the Copper River Delta are interdependent waterways that are absolutely essential to the health of the ecosystem of the region and the planet's health overall. Prince William Bay and surrounding areas have still not recovered 30 years after the Exxon Valdez Oil Spill, and any future spills in the whole region would have catastrophic effects for the ecosystem and all that depend on it for life. The first step of restoration of any kind is preventing harm by protecting what you still have as intact wilderness- the Copper River Delta, including the Bering River Coal fields need to be protected through the expansion of the EVOS Boundary in acknowledgement of the interdependence of this area with Prince William Sound. Thank you for helping to pass Resolution D and create meaningf"

EVOS Trustee Council
4230 University Drive, Ste 220
Anchorage, AK 99508-4650

Dear EVOS Trustee Council Members,

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020.

The Chugach Regional Resources Commission (CRRC) understands that the following four draft resolutions, if approved, would: continue current “spend down” efforts for the remaining EVOS funding, allow funding to be spent outside of the spill-impacted areas, reduce opportunity for public participation, and further dissolve the Trustee Council

1. Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules.
2. Draft Resolution 20-B: Change to procedures for approval of multi-year projects.
3. Draft Resolution 20-C: Combining habitat and research sub-accounts; and
4. Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

CRRC is writing to ask that the EVOS Trustee Council slow this important process down and deliberate the potential impacts of spending down the fund. The EVOS Trustee Council is forcing this decision while residents of the spill region are distracted and scared of a global pandemic and have been unable to participate in the process because real public meetings are not occurring. The Chugach Region communities, including those represented by this letter, were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region and People are still healing from unrecovered resources, the effects of lingering oil, and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to maintain the continued path towards restoration of natural resources and supporting the future of healthy communities, Tribes, and residents.

It is our hope that the EVOS Trustee Council will seriously consider obtaining substantial and meaningful public input from spill affected communities only. Additionally, the “New Vision for EVOS” recently rejected by the EVOS Trustee Council is not in the best interest of our Tribes and Peoples. Whereas the concept is sound, organizations like the Prince William Sound Science Center and the Alaska Sea Life Center were not even in existence when the spill occurred and do very little to serve those most affected; the Alaska Native population in the spill impacted area. Whereas our Alutiiq Pride Shellfish Hatchery which has been conducting restoration activities since 1990 goes unrecognized. More thoughtful engagement with all user groups and stakeholders is needed. We ask that the EVOS Trustee Council provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the above resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area and can be offered the opportunity to testify in person

A hasty spend down of EVOS funds will unleash untold changes on the Chugach region and its subsistence lifestyle at a once-in-a-generation moment when a global pandemic is preventing people from participating in the process. In light of the significant impacts a change in the current structure of the EVOS Trustee Council is projected to have, CRRC does not support the resolutions at this time. Furthermore, CRRC firmly believes the ideas were developed in a silo, without meaningful in-person participation from affected stakeholders. That does not mean that a spend down plan can never be approved; it just means that the EVOS Trustee Council needs to slow this process down long enough to allow stakeholders to find more ways to reduce the impacts to Eyak, Valdez, Qutekcak, Tatitlek, Chenega, Port Graham, and Nanwalek.

CRRC therefore urges the EVOS Trustee Council to deny the resolutions at this time. In the meantime, the EVOS Trustee Council, CRRC, and other Alaska Native organizations can work together to mitigate and offset the impacts to subsistence users in the spill area. The EVOS Trustee Council is forcing these spend down changes over the opposition of, it seems, every single entity and person in the spill impacted region who has spoken up so far. Surely Alaska Native residents in the oil spill region’s well-being and subsistence lifestyle is worth that much.

CRRC thanks you for your time and looks forward to discussing these issues further.

Sincerely,

Willow Hetrick-Price | Executive Director | Chugach Regional Resources Commission

RE: RESOLUTION 20-D OF THE EXXON VALDEZ OIL SPILL TRUSTEE COUNCIL REGARDING
AMENDMENT OF THE RESTORATION PLAN TO INCORPORATE AN ECOSYSTEM
APPROACH TO THE OIL SPILL BOUNDARY

Dear EVOS Trustee Council Members:

Thirty-one years ago, the Exxon Valdez dumped 11 million gallons of oil into Prince William Sound, a disaster that highlights the vulnerability of our vital salmon ecosystems. Five years later, the Restoration Plan for the spill rightly prioritized the areas directly affected. After 30 years of targeting those areas first, the Council is now in a position to address broader impacts.

SalmonState stands in strong support of extending the Exxon Valdez Oil Spill (EVOS) Restoration Boundary to an ecosystem-wide boundary that includes the Copper River Delta. We appreciate the opportunity to demonstrate our support with this letter and we applaud the broadening of the scope of restoration and the ecosystem-based approach in your decision making moving forward.

SalmonState is an Alaska based and Alaska-focused project of the New Venture Fund, a 501(c)(3) public charity actively supporting innovative and effective public interest projects. SalmonState works within Alaska to guarantee Alaska remains a Salmon State by protecting and preserving habitat and promoting fish first policies for this irreplaceable resource. SalmonState works alongside other Alaska organizations, commercial fishers, sport and recreational fishing guides and enthusiasts, salmon dependent businesses, and Alaska Native groups to maintain sustainable commercial, sport, and subsistence fisheries.

We support the inclusion of the entire Copper River Delta east of the Copper River, the connected ecosystems of the watersheds of Katalla, the Bering River and Controller Bay, and the Bering River Coalfields. Industrialization in this region, including coal mining, would pose an unacceptable risk to Bering and Copper River wetlands and old-growth forest ecosystems. We are keenly aware that intact wild salmon ecosystems and the runs that depend on them are becoming increasingly rare worldwide and that this region of Alaska is home to one of the most robust wild salmon runs left on the planet.

Perhaps most notably, the Copper River run of wild salmon has an incredible density of fish. The Chinook is comparable to the much more voluminous Kuskokwim River and they even have a higher density than in the famed Bristol Bay (State of Alaska's Salmon and People, 2020).

The long-term vitality of this region will ultimately contribute to cultural integrity, economic prosperity, and continue the legacy of Alaska's Wild Salmon which are significant internationally. Widespread support for increasingly protective measures in the region is notable:

- local Indigenous communities, fishermen, scientists and residents have submitted comments in support of resolution 20-D,
- wildlife and conservation organizations representing millions of hunters, anglers and outdoor enthusiasts have asked EVOS Trustee Council to stay the course on habitat conservation with remaining oil spill settlement funds,
- Cordova District Fishermen United, which represents and advocates on behalf of over 900 commercial fishermen and their families, has endorsed prioritizing habitat over mining, and;
- Senator Murkowski has recognized that the risk of coal mining threatens the habitat of the commercial fishery.

The 1989 Exxon Valdez Oil Spill severely impacted many species of fish and wildlife, including salmon and herring, which migrate between the Delta and the Sound annually. These critical fish species rely on both ecosystems to survive. Through the prioritization of protecting these two areas in unison, the fish and wildlife in the region will have a better shot at full recovery. Humans created this ecological disaster and it is our responsibility to repair the damage.

Resolution D is the clear path forward to ensuring wild Copper River salmon, the ecosystem of the Copper River Delta, and the people who rely on the wild salmon for their way of life will continue to thrive. We appreciate the opportunity to comment on this important issue.

Subject: Resolutions 20-A, 20-B, 20-C, 20-D

Dear EVOS Trustee Council Members,

Cordova District Fishermen United (CDFU) represents and advocates on behalf of over 900 commercial fishermen and their families who harvest the sustainable wild resources of Alaska's Area E waters, which includes Prince William Sound, the Copper River flats and the northern-central Gulf of Alaska. It is our mission to preserve, promote and perpetuate the commercial fishing industry in Area E and to further promote safety at sea, conservation, management, and general welfare for the mutual benefit of all of our members. Thank you for the opportunity to comment on the following resolutions under consideration by the Trustee Council.

Resolution 20-A: CDFU takes great interest in ensuring that public processes remain fair and open to stakeholders within the region. We are concerned that if the EVOSTC were to adopt Resolution 20-A, that stakeholders would have fewer opportunities to engage with the Trustee Council on matters that concern the recovery and restoration of the EVOS region. Regular meetings ensure that citizens remain engaged with the Trustee Council and that the public process remains transparent and open.

Resolution 20-B: No comment.

Resolution 20-C: CDFU takes interest in both research and restoration, particularly concerning fisheries within the Copper River, Prince William Sound, and Northern Gulf of Alaska, all of which were impacted by the Exxon Valdez Oil Spill. It is important to consider that both research and restoration are necessary to the more complete recovery of the oil spill region, and that projects in both arenas continue to be funded for the benefit of the EVOS region. Maintaining these accounts separately provides the most transparency possible for the use of the designated funds and ensures that projects in both research and restoration work continue to be funding.

Resolution 20-D: CDFU has long supported research and restoration work in the Copper River and Bering River region, as these areas play a vital role in our community's economic engine. This region is home to some of the world's richest waters, and as a large portion of economic stakeholders within this region, we see firsthand the connection between the entire ecosystem of Prince William Sound, extending to the Bering River. Healthy salmon fisheries cannot happen without a healthy and intact ecosystem, both in the watershed and ocean environments. With that in mind, we are supportive of this resolution and incorporating the ecosystem approach to extend the boundary of the EVOS area.

Pristine habitat and an intact watershed are both absolutely critical to the future of our sustainable salmon runs. Our community, as regional stakeholders, bore the economic burden of the Exxon Valdez Oil Spill over 30 years ago, and several of our then-existing fisheries have not recovered. As a result, we are more intent than ever to help protect the natural resources of the region, and request that you do all that can reasonably be done to ensure that the habitat on which fish and wildlife depend in Prince William Sound, the Copper River watershed, and the Gulf of Alaska is protected and restored.

Thank you for your time and consideration. Please do not hesitate to reach out to CDFU if you have any questions.

Sincerely,

Jerry McCune
President

Chelsea Haisman
Executive Director

CITY OF CORDOVA

December 16, 2020

Exxon Valdez Oil Spill Trustee Council (council)

RE: City of Cordova Comments Regarding Council Draft Resolutions A, B, C, and D

To the Council:

The City of Cordova strongly opposes the Council's consideration of Draft Proposals A, B, C, and D at this time. The City of Cordova is one of the most spill-impacted communities in the spill-impacted region. In the context of the current pandemic, the budget cycles of communities are under heavy deliberation as they attempt to balance them, and with the holiday season imminent, it is a terrible time to solicit stakeholder engagement from within the region. The pandemic restrictions in place prevent access and dialogue to deliberate the disposition of approximately \$180,000,000 in assets intended to restore the region, and this merits an open and accessible public process.

The City Council of the City of Cordova, by direction to me the Mayor of Cordova, strongly urges you to table the significant alterations of the fund through these draft proposals until public comment on the process is more feasible. The City further strongly encourages you to host a meeting in Cordova to facilitate this stakeholder dialogue. Consideration of these draft proposals at this time supports recent criticism that the Council is circumventing public process and operating without transparency or access.

Respectfully,

Clay Koplin
Mayor of Cordova, Alaska

Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am an Alaska Native stakeholder from the spill-impacted region. I am a Koniag shareholder. I currently live in Kodiak. As a result of the oil spill, we couldn't get subsistence food we rely on for the winters. We still see the affects in our food and if you dig deep enough, you can still find tar balls.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Sincerely,

Linda Amodo

4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. We represent businesses and non-profits that are impacted by EVOS. I currently live in Seward. I used to live in Port Graham.

The EVOS trust has great potential to help in our community with research, recovery. For us in Seward, our economy revolves around the health of the ocean. Kenai Fjords National Park, Fishing Industries (both sport and commercial), mariculture, wildlife (the Alaska Sea Life Center). These funds could be used to continue to help support the recovery of the environment - which helps our people and economy.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Each of the communities in the impacted region know what they need best.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

As an Alaskan, we all saw the devastation – especially to the ecosystem and sea life habitat. Certain species still have not returned to the spill area.

I currently live in Anchorage, Alaska. I lived in Alaska at the time of the spill.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. This fund was set up to compensate and assist recovery from the Exxon Valdez Oil Spill. Before the spill, there were many more fisheries, canneries, regional fishing boats, service industry and fish in the Prince William Sound Region. We can do so much more to help these businesses come back - and to help re-populate the herring, salmon, halibut, shrimp, clam beds, kelp and other losses to the region. The funds need to stay in this region to help those impacted. And frankly the approval process for funding has been made so difficult and cumbersome that it prevents many from seeking it. If you want to make a change that will help those impacted, then add simple funding mechanisms for things like business grants, environmental programs, clean-up programs, ecosystem improvement, etc.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I think it is vitally important that EVOS funding continue and that the public continue to have a voice in its application and the management and research/recovery efforts of Prince William Sound. I am a stakeholder; a native, a Cordovan, a CIRI shareholder and member of the Native Village of Eyak. I am a retired Land Specialist with the USFS and literally the founder of the Prince William Sound Framework Planning document created by the USFS years ago before my retirement. And I was a member of the team that built it. I am a hunter, a sports fisherman, subsistence gatherer of fish and eggs, trapper and overall lover of Prince William Sound. I have tons of experience there as a boater and user of the resources. I love the sound for its wildness, resources, and special experiences that are uniquely Alaskan. The resources are still injured and in recovery... and today those resources are even more impacted as we learn the effects of global warming. We must continue to work together in the management of Prince William Sound and its resources.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses

the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am a subsistence user from the region and currently live in Cordova. I am an employee of a regional nonprofit representing the economic development interests of Prince William Sound communities. The community of Cordova lost fishing revenue for at least a decade because of depressed wild salmon prices. This is lost income that families were not able to invest in their fishing businesses, their kids' education, gaining equity in their homes, or saving for retirement. It also represents lost income to municipalities in the form of reduced revenues from raw fish tax.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Using an ecosystem-based approach to consider funding for research and habitat restoration or conservation is so much more logical, and science-based, than being bound by arbitrary lines drawn on a map. As the EVOS TC. noted in its own materials with regard to this resolution, fish, birds and ocean currents move resources across hundreds of miles, and research and restoration/conservation decisions need to take these movements into account.

Sincerely,
Kristin Carpenter

Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I live in Ellamar and Delta Junction.

I expect the EVOS Trust to continue its job of research and repair to damages created by the spill. To me the canary in the coalmine is the absence of herring and consequently life that depends on them. A weakness or break in the chain affects the load it can carry. Beginning in 1990, I boated, fished and explored the waters and coasts of Prince William Sound. Since 1993, I have lived in our family-built home at Ellamar, Alaska.

Prince William Sound is a composition of an intricate and delicate web of plants and animals, both land and water based-all of which must be nurtured and protected. Any disruption in the web unravels the small and the large that make the Sound most valuable for subsistence, sport, culture, and commerce. Degradation of the resources can be swift--returning them has proved to be painfully slow. I cannot count the number of times I've heard, "Before the Spill, we had..."

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust

was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

There is no debate that the Exxon Valdez Oil Spill continues to affect multiple environments. These conditions do not “self-sunset”. Consequently, the need to continue care is mandatory. Shifting this responsibility to the Alaska Community Foundation makes practical and fiscal sense. It will guarantee longevity promoting a healthier marine environment and balance interests of stakeholders.

4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I live in Indian, Alaska. I grew up in Montana and environmental disasters shaped my upbringing; Berkeley Pit in Butte.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. I am in favor of supporting an endowment with the remaining \$150 million for a community regional foundation to support economic development.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

In full disclosure, I have not followed the spend of the \$900 million EVOS Trust. Knowing there is funding in excess of \$150 million and the trustee council is hastily attempting to spend down in a hasty and non-transparent process, I fully support creating an endowment. Let money work in perpetuity.

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region and currently live in Anchorage. I am a direct descendant of an original shareholder for Chugach Alaska Corporation. I have family from both the communities of Chenega and Tatitlek.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. The public that "Live, Work, and Play" within the spill-impacted region currently, and who were there during the spill, have direct knowledge of the devastation. It is extremely important to include public participation so that real meaningful solutions can be devised and implemented. The composition and staffing of the Governmental agencies assigned to the EVOS trustee council are always changing. By including the public in important policy decisions, the best most informed decisions can be made.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses

the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Resolution A: The elimination of public participation is the elimination of oversight, organizational agility, and goes against the original intent of the settlement agreement.

Resolution B: There must be oversight of the projects that are funded on an annual basis. If there is no review and oversight how does the council know it is getting what it paid for and how does the research benefit the public? Funding for multi-year projects should be contingent on the project's success over the previous year and not a blanket approval. This will also prevent potential 20-year projects that spend money and do nothing meaningful.

Resolution C: Combining accounts into one large account eliminates balance in the use of funds. This resolution essentially creates a large "miscellaneous" fund that will lead to mismanagement and inappropriate use of funds.

Resolution D: These funds are intended to repair the damage that was done to the spill-impacted area. Full restoration of the spill area has not occurred therefore it is extremely inappropriate to fund projects outside of the area. The EVOSTC stated in the early years after the spill that once the resources, species, and land have been restored then the people will have been restored. Over 30 years later, all of the species, resources and land have yet to be restored. The people are still hurting and waiting for the time that they will be made whole again.

Sincerely,

Ben Cutrell

Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I lived in the region during the spill and am a sport fisherman.

I am a Real Estate Appraiser & Owner at Derry & Associates, Inc. We did numerous appraisals for EVOS as part of your real estate acquisitions. We appraised numerous properties on the Kenai Peninsula both impacted by the oil spill and for EVOS.

I currently live in Kenai, Homer, and Halibut Cove. At the time of the spill we lived in Homer. Since then we acquired property in Halibut Cove, and are seasonal residents there. As detailed earlier, both my wife & I are real estate appraisers with extensive experience/knowledge of the Kenai Peninsula real estate market. And the properties acquired by EVOS on the Kenai Peninsula.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Continued action to further remediate the effect of the spill must continue, plus maintaining awareness of current petroleum activity and spill prevention.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region and a commercial fisherman.

I was impacted by the Exxon Valdez oil spill. My community and work was devastated by the destruction to the wildlife and the waters. I could smell and taste it in the waters as far away as Kodiak that summer of 1989. Coastline, mammals, birds, crustaceans were all harmed if not killed outright. It broke my Alaskan heart.

I currently live in Anchorage. I've lived, traveled and worked in Kodiak, Seward, Kenai, Cordova in the fishing industry and for the government. Everywhere was affected negatively to say the least. For many years.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Put the money into an ongoing endowment. Spending down the fund just to spend it is irresponsible. Restoration of the habitat, the health of all the inhabitants of the region should be the guiding value; mammals, fish, crustaceans, water and land birds. The region should continue to be under research by scientists documenting the long-term effects of such a massive disruption to the environment. EVOS has done a great job the past three decades. I'd like to see it continue as a trust or endowment that makes funding available in perpetuity for the benefit of the affected areas. That's miles of coastline already. I'm not in favor of giving money to regions outside the spill impact.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To

maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Thank you for all that has been accomplished to restore the habitat, the creatures and our hearts. Please keep the scientific and restoration projects going in the affected region.

Exxon Valdez Oil Spill Trustee Council
 Attention: Chair Jason Brune
 Grace Hall Building
 4230 University Drive, Ste. 220
 Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am an Alaskan and currently live in Anchorage. I came to Alaska one week after the spill. My 30+ years' experience with Alaska and its communities drive me to focus the EVOS trust's work on the human side of the spill-impacted areas.

I believe that the EVOS trust needs to start focusing on the human impacts the spill had rather than the scientific study of the effects of the spill. The focus on human impacts should begin to assist the communities with alternative means of self-support since fishing was changed, perhaps irreparably.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. I believe that the endowment model fits this particular situation: 1) a large "principal" balance which can be directed to strategic spending initiatives; 2) a low-cost management of the principal (and the earnings from it) for the benefit of the communities the EVOS Trust represents; 3) that the spending hasn't always been reflective of or allowed the participation of the people in the region; 4) the current management structure is too cumbersome and political; 5) the earnings from the "principal" can be targeted help for these communities; 6) it utilizes the concept of the Permanent Fund and the PFD which has shown success in managing money for the benefit of Alaska.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

I support the "New Vision for EVOS" concept outlined by the Think Tank.

Sincerely,

Kevin Gray

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I live in Valdez and am a subsistence user and sport fisherman in the region. I served on the spill response crew. Everyone in the Prince Williams Sound is still suffering the environmental impact that the spill had on fish and wildlife populations. Some fisheries were devastated and have never recovered like the herring and cod. And lower numbers of wildlife still impact tourism.

I have lots of friends and neighbors whose health was impacted, and lives were shortened. Because citizen oversight will ensure that the fund is managed in a way that benefits those communities and aspects of environment that are suffering.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. Dear Members of the Trustee Council:

I live in southcentral Alaska. Just being a citizen should be enough, but I am very aware of the tragedy and impacts of the spill and was involved with a play THE BIG ONE. A CHRONICLE OF THE VALDEZ OIL SPILL written by Dick Reichman who lived in Valdez at the time and had first-hand knowledge of the people and experience.

This is an opportunity for a just settlement for those who are still casualties of the terrible event of the spill. It is crucial to have the resources to preserve, conserve and protect the people, marine life ,wildlife in perpetuity. It is also important to have the resources to prevent future disasters and most importantly be visionary long-term stewards. of the land and waters of Alaska for our children and grandchildren.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am the Director of the Regional Housing Authority for the Chugach Region which covers much of the impacted area. All NPRHA communities were significantly impacted by the spill and cleanup and still experience social and economic impacts from the spill.

I currently live in Eagle River. I have worked with communities impacted by the spill for over 20 years providing affordable housing and infrastructure in the impacted communities.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. There are still significant impacts on the communities and residents and the remaining funding should be managed to provide long term benefits for those communities. The people who are most impacted need to be heavily involved in how those benefits are determined.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and]

rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a Chugach Alaska Native shareholder.

My mother went from receiving over \$1100 checks went to zero dollars for years. This disaster impacted our tribe drastically when it occurred, still impacts our tribe today and without better management of these funds will impact it for my kids and grandkids also.

This has affected my tribe, my mother, myself and my children and grandchildren based on financial losses. They will continue to do this without good management of this money. The environment needs lifetimes of care and not having a better management plan that will have lifetimes of money and restoration will continue to affect my tribe which affects me and my family and tribe.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. I totally support long term impacts for the benefit because this will take generations to restore and improve this still impacted region. The funding needs to be discussed in an open process and participation so you can see that this money can be better managed to last for the generations it needs to heal. This has so far impacted 2 generations of my family and will impact more. Us living now will be long gone when this finally is restored and we need to make sure the funding is still there when we aren't. There are better plans to consider that will ensure the regional lifetime support that is needed. The better planning and management need to happen now with the remaining money.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To

maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

We need to keep yearly meetings with transparency and public input. Just because this spill happened in 1989 doesn't mean everything is fixed, it's a generational process. We need to keep the money meant for the still impacted regions and injured people in focus, the regions are still impacted as well as the people.

Sincerely,

Catherine Havens

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. My background in the region is as an Alaska Native from the region, a subsistence user, and resident in the region during the oil spill.

I am a shareholder at Chugach Alaska. I currently live in Anchorage.

I am from Moose Pass and was living in Seward at the time of the spill, so I saw the impacts firsthand in our community. Me and my family were subsistence users, and some of my family also made a living from fisheries. The spill devastated our small communities. The trust was established for restoration and rehabilitation of the spill impacted area, and while much good work has been done there is still much yet to accomplish. Some resources have not recovered, and the EVOS Trust has not adequately addressed the human impacts, in particular related to the local economies. It's important to assure the remaining funds are used in a sustainable way to provide benefits to the region and the people.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Public participation is essential to assure that the EVOSTC plans align with the needs of the region, and to assure that benefits flow to local people and communities. Sadly, very little of EVOS funding to date has directly helped the small communities in the spill impacted area.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for

habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

The four draft resolutions are inappropriate in that they seek to limit public participation, to make it easier for EVOSTC to spend the remaining funds without an open and transparent process and expand the spill boundary. The spill boundary as initially established 31 years ago should not be expanded as there are still many important ways to use the funds for the intended purpose in the original spill boundary. The EVOSTC should work with key stakeholders in the region to identify a better way forward that provides more long term and sustainable benefits to the communities in the spill area.

Sincerely,

Josie Hickel

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am an Alaska Native from the region, subsistence user, and commercial fisherman.

I am a Koniag shareholder and Secretary of the Leisnoi Tangirnaq Tribal Council. I currently live in Kodiak. My family has relied on the fishing industry since the 30's, we experienced setbacks in our ability to harvest any salmon and other coastal species. I'm in support of the New Vision EVOS trust, better fiscal management and having the fund set up for use in perpetuity for the affected regions is in the best interest for all involved.

Commercial fishing and subsistence lifestyles were impacted. I was a Kodiak resident at the time of the spill. I don't feel the initial impact and devastation of the Exxon spill were immediately known. It hasn't been until recent years that the impact of such a massive environmental disaster have been fully acknowledged. Continued monitoring of habitat, education and preservation of culture and lifestyle will hopefully bring the affected regions back to a semblance of what it once was. Perpetuity of the remaining funds ensures generations to come can continue to live, work and, prosper in Cook Inlet, PWS and Kodiak region.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

I do not believe spending down the remaining funds are in the best interest of Alaska’s people, it seems the government is tired of this trust and would like it to go away. Therefore, it should be turned over and let a private entity better manage the remaining monies. Continued funds equals continued recovery. Very little, other than land conservation has been accomplished in 25+ years.

Sincerely,

Chrislyn Hoen

EVOS Trustee Council
4230 University Drive, Ste 220
Anchorage, AK 99508-4650

Dear EVOS Trustee Council Members,

I wish to comment on the deliberations of this EVOS Trustee Council to the way and means it plans expending its remaining monies. First, I was Chairman of the Board for Chugach Alaska Corporation (CAC) during the onset of the Exxon-Valdez Oil Spill in March of 1989. More on that experience later. Second, I was the President of the Port Graham Corporation, an ANCSA village Corporation within the Chugach Region between 1975 and 1978. At Port Graham I began the land selection process that has resulted in selecting over 100,000 acres of land on the eastern shores of the Kenai Peninsula. Over 200 miles of the village corporation's coast lands have remained heavily oiled, 31 years later. Yet the village of Port Graham and the Port Graham Corporation have received little if any restoration monies to repair the damages to our area. I believe if the Council reviews my comment will see that it is true. On the day of the oil-spill we chartered an aircraft to view the grounding. As we circled the stricken tanker we saw very little seepage and the weather was calm. We contacted Alyeska Pipeline Company and were told they had everything under control, that oil spill materials would arrive shortly. They didn't say those materials were frozen under many feet of ice and snow! It would be days before they were able to respond to the most catastrophic spill in North America at the time. By then it would be the weather that cemented the oil industries incompetence. However, to add insult to injury, EVOS dangled millions of dollars in front of shareholders faces up and down the spill way as its solution to mitigate damages to coastal lands. In 1989 most of those village shareholders lived near or at the poverty level. As the CAC chairman I wrote letters to Chenega and Tatitlek shareholders, imploring them not to sell. In the end only Port Graham chose not to sell. I believe EVOS HAS CONTINUED TO PENALIZE PORT GRAHAM FOR ITS UNWILLINGNESS TO SELL. It's reflected in your records. Moreover, the remaining EVOS monies need to stay within the Chugach Region, using a form of financial sustainability, to address the unmet restoration needs around the coastal lands of Chenega, Eyak, Tatitlek, English Bay (Nanwalek) and Port Graham. The notion of handing ITS RESPONSIBILITY over to a third party, say the Alaska Communities Foundation, is an abdication and repugnant. An organization such as the Alaska Community Foundation would further remove an understanding of the intimate needs that still exists within the region.

At the October 14, 2020 Exxon Valdez Oil Spill (EVOS) Trustee Council Meeting, the Trustees approved four draft resolutions for public comment. The 60-day public comment period began on October 16, 2020 and closes December 16, 2020. Trustees also opposed a motion to support the "New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill" proposal submitted by the EVOS Think Tank of Citizens.

I understand that the following four draft resolutions, if approved, would continue current “spend down” efforts for the remaining EVOS funding; allow funding to be spent outside of the spill-impacted areas; reduce opportunity for public participation; and further dissolve the Trustee Council:

1. Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules;
2. Draft Resolution 20-B: Change to procedures for approval of multi-year projects;
3. Draft Resolution 20-C: Combining habitat and research sub-accounts; and
4. Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary.

I am writing in support of the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Chugach Region communities, including those represented by this letter, were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources, the effects of lingering oil and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

It is our hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, we believe that the above resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Thank you for your consideration.

Sincerely,

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a Alaska Native stakeholder from the spill-impacted region, a subsistence user, a commercial fisherman, and sport fisherman. I am an original Chugach Alaska Corporation and Eyak Corporation shareholder. I currently live in Anchorage. My ancestors are from the PWS and have lived off the land and the sea for thousands of years.

I am an Alaska Native who grew up in Cordova and on the Prince William Sound (Sound) subsisting, and crewing on my dad's commercial purse seine and gillnet business in my younger days. I consumed an abundance of fish, wildlife, and harvested fresh vegetation from the Sound. I am an original shareholder of Chugach Alaska Corporation (Chugach) and Eyak Corporation, that owns subsurface and surface land throughout the PWS. The abundance of growth within the fishing industry and the uptick of growth Chugach and Eyak came to a screeching halt due to the EVOS devastation. Chugach had a fish processing company based out of Cordova that went bankrupt because there were no fish to process the fishing fleet was busy cleaning up the toxic oil waste rolling throughout the PWS caused by EVOS.

I was an Eyak Corporation board member, while the EVOS litigation took place in the 90's. We had the role of reviewing legal and land documentation spending sleepless nights making sure we were making the right decision to bring the question to the shareholder, should we sell our land for fee-simple title, and conservation easement. The sale of the land was a way to provide hope for our people, our land and sea tainted from a single act of an intoxicated Exxon Mobile captain, who clearly did not take his role seriously negatively impacted our shareholders. The EVOS Trust was meant to help the communities, and the people impacted by the EVOS spill, meaning the spill boundary. I also think the Trustees got their wires crossed, if they think the sales of our land was a settlement, they are clueless. The impact of the EVOS oil spill effects is still noticeable.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Sincerely,

Millie J. Johnson

RESPONSIBLE DEVELOPMENT. SUSTAINABLE ENVIRONMENTS. HEALTHY COMMUNITIES.

December 16, 2020

Exxon Valdez Oil Spill Trustee Council
 Attention: Chair Jason Brune
 Grace Hall Building
 4230 University Drive, Ste. 220
 Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I was born and raised in a commercial fishing family in Cordova. It's a community where commercial fishing is king, and the residents take great satisfaction in their trade. My family owned a small fishing business, and the *F/V Miss Emily* was my first classroom. It was on the back deck of that boat where I learned the value of hard work, honesty, and community.

That philosophy and our very way of life was put to the test in 1989 when the *Exxon Valdez* tanker ran aground just miles from Cordova. The accident was the largest and most devastating human-made environmental disaster ever to occur in the United States at that time. The magnitude of the spill caught the oil industry flatfooted, and no one had a plan. A 980-foot tanker was grounded in a remote and diverse marine habitat, accessible only by helicopter, plane, or boat. Millions of gallons of oil gushed uncontrollably out of the side of the tanker.

After days of frustrating inaction, a grassroots response effort began that was nothing short of heroic. Hundreds of Cordovans said goodbye to their children, boarded their boats, and began cleaning up the oil in any way they could. Out of desperation, the fishermen developed makeshift gear for oil-skimming operations using simple five-gallon buckets and absorbent pads. They even took to the beaches and began scrubbing boulders by hand. Piles of animal carcasses were washing ashore with every tide.

The people in my community were fighting for their livelihoods, but sadly, it was already too late. Roughly 11,000 square miles of ocean and 1,300 miles of coastline were tragically covered in oil. Americans will never forget the images of oil-drenched seabirds, dying otters, and black beaches splashed across television screens in the spring of 1989. But what America did not see, and what most people

don't fully comprehend, is the magnitude of human devastation that followed. My parents joined over 30,000 other plaintiffs to file suit against Exxon. It was a source of anxiety, leaving my community to question whether our fisheries and economy could survive.

The resolutions up for debate at EVOS next month are inappropriate. Not only has EVOS failed to engage in comprehensive community outreach or broad public comment period in at least two years, but these resolutions would significantly alter the future trajectory of EVOS and public participation opportunities. I am opposed to Resolution A, B, C, and D.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

After forty years living, fishing, and serving the community of Cordova, my father passed away in 2014. I never went fishing for halibut with my father in the winter months. He considered it too risky to have us on board for the groundfish season. Much of that time, my father fished in the dark since there are only four hours of sunlight a day. The fishermen use floodlights to drop their hooks. When my father returned from one of these trips, he was exhausted, quiet, sore, and grateful to be back safely with his family. I think about that summer day in 2008 when the Supreme Court handed down the decision to compensate my father with \$15,000 when his losses were in excess of \$1.5 million, and I know the system failed that proud, very hard working man.

Please consider the ramifications of these resolutions. Delay action, extend public comment, engage the communities in a meaningful way to explore the long-term future of EVOS and how we might, together, adopt the *New Vision for EVOS* proposal so that EVOS can benefit future generations.

A handwritten signature in black ink, appearing to read 'Rachel Kallander', with a long horizontal line extending to the right.

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I lived in the region during the oil spill, worked on the clean-up crew, and have been commercial fishing and living in Cordova for over 40 years. Cordova is my home.

I was actively involved in numerous fisheries in Prince William Sound in 1989, including the herring fisheries. The Exxon Valdez had a huge long-term impact on the financial values my limited entry herring permit. I personally experienced long term emotional impact from the spill and the effects it had on my community. I lost faith in the judicial process after the supreme court's decision to allow Exxon to get away with it. It took many years to build the family fishing business up after losing the herring fisheries, but we did persevere, despite Exxon.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses

the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

The EVOS Trust, its staff, and Council does not have a track record of truly engaging with communities. I cannot understand how after 31 years, we still feel in the dark. Please engage communities in a meaningful way.

I feel strongly that NO funding that remains should be used in any area of Alaska outside the impacted area. This would set a new precedent to expand the boundaries and would be a slippery slope towards a money grab.

As someone who has served in volunteer roles to support my community through trauma, I ask that the EVOS staff and leadership reading this letter please pause to consider the trauma that took place in 1989 and continued on long after the clean-up. Allow that real lived experience to guide your decision making. Please reconsider this approach and think about the communities and region in the long-term. Let that be your legacy as Trustees. Please consider the New Vision for EVOS proposal as a solid legacy for what remains in the Trust; a legacy that could leave positive impacts behind in perpetuity.

Sincerely,

Patricia Kallander

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I lived in the region during the spill and worked on the oil spill clean-up. I currently live in Seward.

Living in Seward during the spill and collecting oiled birds & sea otters I saw first-hand the damage done to the wildlife, their habitat and to Kenai Fjords National park coastline. I worked collecting oiled birds & sea otters during the spill.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Local historical knowledge is extremely valuable.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

I believe that the EVOS funding should be used for research and for habitat. These are both important needs. Public input is necessary. Local knowledge is important. A sustainable revenue source would allow for research and restoration to continue. Spending all of the funds defeats the purpose of ongoing research and rehabilitation. There are lingering effects of the spill to this day. Sometimes ecosystems extend beyond simple boundaries. Thank you for the opportunity to respond.

Sincerely,

Mark Kansteiner

Exxon Valdez Oil Spill Trustee Council
 Attention: Chair Jason Brune
 Grace Hall Building
 4230 University Drive, Ste. 220
 Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. My family is from this region and we are shareholders of Chugach Alaska. I currently live in Anchorage. My experience with the oil spill was primarily in Seward. I am connected to this through my work and a commitment to long-term vitality of the region Native communities.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. The region still experiences impacts from the spill. The community restoration is not complete. EVOS has not achieved its legal responsibility to restore the communities. Permanent endowments would allow for necessary continuing restoration and research.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Sincerely,

Diane Kaplan

Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I currently live in Anchorage. As a boat owner, I spent every weekend and summer enjoying PWS. I saw the direct impact of the spill had on the communities, environment and the people. The philanthropic community with an interest in seeing the funds set aside be invested far into the future to support the health of the PWS area and the people that live there.

I believe that setting up endowments that will serve the region long into the future to make lasting change on the environment, the economic livelihood of the people living there and the stewardship of the area.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region and lived in the region during the oil spill. I am a shareholder at Chugach Alaska Corporation. I currently live in Anchorage.

My family is from Tatitlek, and EVOS took place miles from where my family and our ancestors have lived for thousands of years. Its immediate aftermath took away our ability to subsist, and a generation of Alaska Natives lost their connection to the lands and waters that had been enjoyed for time immemorial. For some, this disconnect is not permanent. For others, it's still impaired by the damage that has been done and that is still ongoing. It's not going away, but the money to restore the environment is? How does that make sense? Please consider this statement an endorsement for the Think Tank proposal.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. According to information posted on the EVOS Trustee Council's website, oil and its affects still linger in the spill-affected area. This oil and its affects will still be there long after the spend down happens. What then? I would rather see the remaining funds placed in a vehicle, like the Think Tank has proposed, that lasts for generations. I also think the funds would be better managed and go further in the private sector as opposed to how they are currently managed by state and federal government.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for

habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

I am 100% against the spend down, and I have the utmost confidence in the collective wisdom of the Think Tank members and the proposal they have put forth which will benefit the communities of the spill-affected areas into perpetuity. To me it comes down to spending all the money, which I'm against, or creating a lasting legacy of protection and restoration.

Sincerely,

Michael Levshakoff

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I currently live in Homer. Key parts of our economy such as commercial and sport fishing as well as tourism were negatively impacted. I have ties to the oil spill through Homer, Seldovia, Port Graham, Nanwalek.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. This region will see impacts forever. An endowed fund is the best way to create a sustainable fund.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution. We support the establishment of a permanent endowment that would benefit the communities directly affected by the spill. This endowment should be proportionally split between the Homer Foundation

(representing the southern Kenai Peninsula) and Alaska Community Foundation (representing the remainder of the impacted areas.)

Sincerely,

Mike Miller

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I lived in the region during the oil spill and am both a pilot and a minister. I currently live in Halibut Cove.

The impacts of the oil spill were depleted clam, shrimp, and crab stocks. Divided communities - some hired, some no. For fishermen, livelihood adversely affected. Exxon treated spill as a PR problem rather than as an environmental disaster and measured "success" in terms of dollars spent rather than actual cleanup and due compensation to resident commercial fishermen whose economic possibilities through commercial fishing were severely devastated. Divided communities affected.

The people affected should have a strong voice in resolving any unmet needs of affected communities and in determining appropriate compensation to those whose livelihoods were in any way affected by the spill from the remaining funds set aside.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and]

rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Measure this spill event not in terms of dollars spent and as a PR effort by Exxon and an attempt to constrain the Trustees. Measure in terms of the environment and the affected communities restored and made whole.

Sincerely,

Wallace Mills

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region and lived in the region at the time of the spill. I am a shareholder at Chugach Alaska and the Eyak Corporation.

Prince William Sound and the Islands of Kodiak have long term damage and devastation from the oil spill. Our land our fisheries have been harmed beyond words for generations. I was a commercial fisherman and had to leave the industry because of the damage done to the resources.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. It is my hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. We ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust

was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Please focus on the current spill area with projects that will directly benefit those. Please listen to the voices of the peoples in the current spill region. Thanks

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a scientist and have experience in the region via research. I currently live in Anchorage.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. The region would be substantially better off in the long run if the funds were invested in an endowment that would support scientific research, habitat protection, and ecosystem restoration in perpetuity. Investing the remaining EVOS funds, rather than spending everything down to zero over the next few years, could support activities for the foreseeable future. Since restoration and recovery efforts are likely to be incomplete, it makes sense to extend the life of the remaining assets so they can provide funding for years to come. Ideally, the fund's remaining money could continue to grow over time and invest in the region in perpetuity.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses

the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

The revised structure proposed by the EVOS Think Tank of Citizens is a sensible option that will ensure that restoration and recovery efforts are not halted prematurely and create a sustainable revenue source that will allow these efforts to continue. If there were ever a time for Alaskans to consider a sustainable path forward in the spill impacted region and the mechanics of providing support for future generations, that time is now.

Sincerely,

James Murphy

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I lived in the region during the oil spill and worked on the oil spill clean-up.

I currently live in Kodiak. I was impacted. It altered my entire life. I lived alone on Shuyak Island during the spill. The oil came in daily waves, and I used the power of the press to call attention to the devastating effects of the continual hits of oil all summer long. We got it cleaned but some areas were forever impacted. Awareness, skills training and scientific follow-up are mitigation for the future.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region, a resident, subsistence user, worked on the spill clean-up, and lived in the region during the oil spill.

I am a shareholder at Chugach Alaska and Port Graham Corporation. I currently live in Port Graham. I've lived in Port Graham all my life - my family lives on subsistence foods and my husband was a commercial fisherman when the oil spill decimated the fishery and the prices .

Our fishing industry crashed during that time for all our commercial fisherman, I did not trust the subsistence foods, THE EVOS does not care of about the impacted areas and only funds those special interest groups and are basically using the funds that do not benefit all the villages that were impacted.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. I do not believe the oil has been totally cleaned up for our region. I do not feel that the EVOS Trustee Council listens to the impacted areas and is only interested in funding and benefiting the EVOS Trustee special interest groups.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Sincerely,

Francis Norman

 Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. My background as a stakeholder comes as a community resident in spill impacted region, Alaska Native from the region, subsistence user in/from the region, resident in the region during the oil spill, commercial fisherman, and I also worked on the spill cleanup.

I am a shareholder of Chugach Alaska and Port Graham Village Corporation. The spilled oil impacted our traditional subsistence areas which were selected by our village corporation. I currently live in Port Graham.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Moneys should only be used inside the oil spill boundary area.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and]

rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am a sport fisherman and manage lands in the impacted zone. I have family in Cordova and currently live in Anchorage.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Regarding Resolution A: The Trustees are a collection of public agencies. There should be absolute transparency in any actions taken. Public participation is one way to ensure that transparency. Many of the people in the villages and communities affected by the spill and resulting studies have long term witness and expertise that may assist in more efficiency and effectiveness of future projects.

Resolution D: Strongly object to expanding the spill zone boundaries. This will allow funds to be directed to non-impacted, or marginally impacted, areas and not directed where it is needed most.

There needs to be a focus on the people and communities most impacted by the spill. Very little, if any funds have been directed to overcoming the negative social and community specific impacts. The Council needs to work with the regions impacted for recovery the residents need.

Sincerely,

David Phillips

Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I lived in the region during the oil spill, worked on the oil spill clean-up, and am a commercial fisherman and subsistence user.

I currently live in Kodiak. I am a landowner affected by the spill. I fish commercially in Bristol Bay and live in Kodiak. The EVOS trust provided Kodiak with the Shuyak Fund which the borough uses to repair and maintain borough owned facilities. My husband & I lived on the beach in Kodiak which was impacted by the spill. We also fished herring, halibut, and salmon in Kodiak during the summer/fall of 1989.

I just want transparency in all the EVOS board decisions. I oppose the four resolutions that are out for public comment.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region and subsistence user. I am a shareholder of Chugach Alaska. I currently live in Anchorage.

My entire family worked on the clean-up. We rely on subsistence. It impacted our way of life, our food, and our historical sites. My family originates from the Prince William Sound. My grandfather was born and raised in Cordova. He was a lifelong fisherman.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region simply because the spill has never been fully cleaned up. Dig a little on our beaches... the oil is still very present. Our ancestors come from this land and we should have a seat at the table. "When the tide is out, the dinner table is set." After the spill, our food was poisoned. Our communities took such a huge blow during the spill. My family is from Cordova. My husband's family is from Chenega. He and his family have worked in oil spill response since EVOS because it means protecting our waterways and Native way of life. The social and economic impacts of this horrific event still haunts us today.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Our people have been here for tens of thousands of years. We respect the land we live on that provides for our families - that allows for our communities to thrive. We will continue to stand up for our land, our people, and for our younger generation who might not have seen it first-hand, but still feels the ripple effect today. How can eliminating public input and expanding the oil spill boundary so you can spend the money elsewhere be helpful for our region? This is common sense folks. Do the right thing.

Sincerely,

Jayme Selanoff

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am stakeholder for two significant reasons. One I work for the people of the Chugach Region and a significant part of my job is working on cultural, educational, and economic projects to support those from the impacted region. I also have spent many summer days over the past 20 years in Prince William Sound (PWS) with my family appreciating the beauty that remains. From conversations with Chugach Elders, I understand that although PWS is beautiful today, it was more stunning before the oil spill. It is not the same today as it was.

The Exxon Valdez oil spill impacts those I work with daily. I have seen those who lost so much still struggle to recover all these years later. The gift of working for Chugach Alaska Corporation and the gift to be able to spend some of my summer days with my family fishing and enjoying Prince William Sound.

Those impacted must have open access and participation in the process. There are people willing to do the work, but they are not being heard and they are being shut down. It is important to let them participate. The four proposed resolutions stop their involvement completely. The restoration is NOT complete and passing the proposed resolutions is extremely premature.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

At the time of the Exxon Valdez Oil Spill (EVOS) I was a teenager living in Montana, but I still have vivid memories of the scenes unfolding on television and in print media of this horrific disaster. I was devastated. In 1999, I was blessed to start working for and with Alaska Natives of the Chugach Region. I would listen to their stories of this disaster first-hand. I was devastated. I heard stories of those impacted being dismissed or overlooked by the EVOS Trustee Council (the Council). It seemed as if no one wanted to hear their voice. I was devastated.

As I review the four draft resolutions put forth by the EVOS Trustee Council, I am once again devastated. I do not support any of these resolutions because they will result in yet another devastation to the communities impacted by the Exxon Valdez Oil Spill. There are impacted citizens who are able and willing to utilize these funds as they were intended, yet these resolutions disenfranchise those same citizens. These resolutions lead me to believe the Council is tired of working with the people who were impacted by the spill, the Trustees have other intentions, and they want an easy button that can be made easier by excluding the public. There are incredibly talented people putting forward proposals to make the money last longer and continue to support the recovery of the land, animals, and communities. The EVOS Think Tank of Citizens brought forward a solid proposal for a “New Vision for EVOS: A Roadmap to Reshape the Exxon Valdez Oil Spill”, but the Council opposed the motion.

Below is why I passionately oppose each of the resolutions brought by the Council.

Draft Resolution 20-A: Amendment of the 1994 Restoration Plan to eliminate the annual Trustee Council public meeting and funding process and change reporting schedules:
The Council states in this resolution that they can make this change if “the plan is no longer responsive to the restoration needs”. The plan is responsive, it is the Council that is unresponsive. The Council is rejecting solid proposals and attempting to take away the public’s ability to provide input. This is the Trustees choosing to be unresponsive. This does not justify such a change. This change would allow the Council to stop having annual meetings that involve the public. The only meetings available to the public would be when the Council believes it is necessary, not when the public believes it is necessary. One of the benefits stated for this resolution is that it would reduce the administrative burden and expense. The proposal by the EVOS Think Tank of Citizens would reduce the administrative burden and expense for the Council indefinitely, without disenfranchising those impacted. There does not seem to be adequate justification for such an Amendment to the 1994 Restoration Plan.

Draft Resolution 20-B: Change to procedures for approval of multi-year projects:
This resolution tells me that the Council does not want to put in the annual effort to review the projects that these dollars are going towards. For the people in the spill-affected areas this money is precious. They are still living with the impact of the spill. There are citizens who have a plan and are willing to put in the resources to follow through with the recovery. They need to be heard.

Draft Resolution 20-C: Combining habitat and research sub-accounts:
This resolution changes the plan for the mission of the funds without any other reason than allowing

flexibility. There is still more work to be done within the region as those impacted can share with Council if the Council is willing to consider their input. It is premature to make this change without public involvement.

Draft Resolution 20-D: Amendment of the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary:

This resolution begins the process to move these funds outside of the spill-impacted region while those in the region are still recovering from the spill. Not only is there more work to do within the region, but there are also citizens with plans and the ability to support the plans. There is no reason for these funds to be used outside of the impacted areas, especially without hearing the public feedback first. I cannot support a resolution that causes further damage to the impacted areas. This resolution would be the Council rubbing salt in wounds that are still open.

There are communities still living with the impact of the oil spill. They deserve to NOT have the plans changed before the work is finished. The communities need the opportunity to be heard and to be part of the process. The process needs to be inclusive and transparent. Many of those impacted did not live long enough to see any of the settlement, so it is vital to ensure the current and future generations are included in the recovery.

Sincerely,

Tori Schilke

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I have not personally been impacted by the Exxon Valdez oil spill. However, protecting and supporting Indigenous and rural communities affected by this disaster and others such as climate change is important to me. The EVOS Trust should be placed in endowments for the direct benefit of the communities impacted by the oil spill.

I currently live in Anchorage. I completed my undergraduate and graduate studies at Alaska Pacific University when it was transitioning under the Alaska Native Tribal Health Consortium umbrella. This has given me the opportunity to listen and learn from Indigenous leaders from across Alaska. The communities in the Chugach, Koniag, and Kodiak Island Borough regions are still negatively impacted by the oil spill 34 years later due to habitat loss directly attributable to the oil spill. Leaders from each of these regions in addition to industry leaders recommend placing the EVOS Trust into an endowment for the benefit of these communities in perpetuity. I support the recommendations of this diverse group of leaders.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Many of the people who live in the communities affected by the Exxon Valdez Oil spill have done so in a stewardship relationship with the land and sea for thousands of years. Had the oil spill not happened, the people living in these communities would still maintain this relationship and be able to feed their families and benefit from the surpluses generated by the rich fishery of Prince William Sound. The oil spill was a single event with a long-term detrimental impact to the ecosystem that has sustained these communities for millennia. Placing the EVOS Trust into an endowment for the benefit of these communities in perpetuity allows the people who live in these communities to thrive and to support long-term habitat revitalization necessary to create a sustainable fishery. The recommendation of the New Vision is to place the EVOS Trust under the management of the Alaska Community Foundation which has the capacity and expertise to cost effectively and transparently manage this trust to directly benefit the people the trust is intended to serve. In perpetuity is an essential component of this proposal because frankly we don't know how long it will take or if this ecosystem will ever fully recover to its pre-oil spill state.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

I oppose resolutions A, B, C, and D. This money should be put into endowments for the benefit of communities in the spill zone in perpetuity.

Sincerely,

Joseph Sonnier

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region and lived in the region during the oil spill. I sit on the Koniag Board of Directors. I am a Koniag and Leisnoi Inc. Village Corporation shareholder.

Native artifacts were endangered, damaged or stolen due to oil spill. The EVOS Trust fund made it possible to protect our artifacts through the construction of our Alutiiq Museum and Archeological Repository. Seeing our Alutiiq artifacts being damaged, destroyed and stolen was tragic and a loss of our heritage. Our Alutiiq identity was at stake and finally protected through the establishment of the Alutiiq Museum.

In the past the Trustee Council actively listened to the people representing the impacted communities. I do not see that occurring now as there is no opportunity to continue this dialogue. Inclusiveness and transparency are vital as we learned in the past.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust

was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Kodiak was devastated by the oil spill. Recovery has not been completed. The proposed resolutions are premature. They should be postponed until the public has had an opportunity to testify. It is so important to support our communities and ecosystems towards restoration of natural resources and to insure the future of healthy communities and people.

Sincerely,

Rita Stevens

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am a subsistence user from the region and worked on the oil spill clean-up. I am a resident of Valdez, a retired career Coast Guard officer and former Captain of the port for Prince William Sound and served for Six years as the executive directly of the PWS regional Citizens advisory council. My wife and I fish and shrimp and berry pick for subsistence purposes in the EVOS region each and every year. My son is a student and commercial fisherman.

I have worked in post EVOS spill response community for the Coast Guard, the Oil industry, and representing EVOS region citizens for over 25 years. I live in Valdez and spend as much time out in PWS as possible cruising on my sailboat.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. I have seen first-hand the EVOS oil that lingers just below the surface rock and sands in the coves on knight island and other protected beaches in the EVOS path. I have a son and many friends that commercial fish and wonder at the longer-term environmental aspects of fish and species populations. The remedies provided by EVOS Trust funding should aim for a perpetuity similar to the spill impacts.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

EVOS Trust funding has done an extraordinary amount of good since the spill. In particular EVOS land conservation set asides and improvements to public access help foster public exposure and engagement and hopefully future stewardship with the natural environment of the EVOS impacted region.

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region as well as a resident. I currently live in Nanwalek. I am a shareholder at Chugach Alaska. Dogfish Bay was where my parents went to help with the cleaning up of the oil.

I remember hearing we could not subsist our foods because of the oil spill. I remember my parents working in DogFish Bay helping clean up the mess that destroyed our lands and foods. At that time not knowing or understanding what was going in, all I knew was it was bad, and things will change forever. I remember hearing people say how bad this was and still is to this day still seeing it found years later in the lands. This is still hurting areas who were hugely impacted as well as those who did get hit and had to help revive the lands we still live on today.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region because the effects are still occurring. Our lands are still deteriorating because the oil has sunk all the way through and just because you cannot see it doesn't mean it is there. One payout doesn't equal to a lifetime of the loss of the lands and foods that were taken that year. While those live-in riches, those who CLEANED UP THE MESS suffered and are still suffering to this day.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for

habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Think of the lives that are lost that could have had severe health issues with cleaning up the mess that happened. The hardships of not being able to subsist for a few years because we didn't know if it was safe. Would you live like that or allow your family to suffer? We have put up with so much and we still are dealing with the aftermath YEARS LATER AND ALWAYS WILL.

Sincerely,

Kilann Tanape

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region and a shareholder at Chugach Alaska. I currently live in Anchorage. The Chugach Region communities, including those represented by this were among those most devastated by the Exxon Valdez Oil Spill.

I grew up in the Copper River Basin and am tied to the Chugach Region and communities as not only a shareholder but through those I know living, working and subsisting directly in communities such as Cordova, Valdez and Tatitlek who were most heavily impacted and, in this way, I have grown up familiar with the impacts of the spill and continued to understand those impacts through working at my regional corporation. My brother also worked in Valdez in the spill response field.

I support the EVOS Think Tank of Citizens concept that identifies a path towards long-term endowments and research funding, while further serving spill-impacted communities in perpetuity. The Chugach Region communities were among those most devastated by the Exxon Valdez Oil Spill.

Our spill-impacted region is still healing from unrecovered resources, the effects of lingering oil and continuing reverberations from the human and economic impacts of the spill. We owe it to our communities and important ecosystems to support the continued path towards restoration of natural resources and supporting the future of healthy communities, tribes and peoples.

I hope that the EVOS Trustee Council will seriously consider the Think Tank concept and alternatives that would provide continued funding in alignment with its important mission. I ask that they provide further opportunities for discussion in the interest of inclusiveness and transparency while serving communities and future generations within the spill-impacted areas.

Specifically, I believe that the resolutions out for public comment are premature, and that any advancement of the agenda that these resolutions represent towards a spend down plan should be postponed until meaningful public participation and review of other options can be considered by community members in the spill-impacted area.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of “restoring, replacing, enhancing, [and] rehabilitating” the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

Sincerely,

Lindsay Townsend

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a stakeholder from the spill-impacted region. I am an Alaska Native from the region. I am a shareholder and member of the Tatitlek Corporation, as such, I am also a land owner in Two Moon Bay.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. Those directly impacted should and deserve to know what is or is not being done. It is as simple as that! So much has happened as a direct result of the spill that can never be repaired or replaced. Shutting those impacted out, is adding insult to injury.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

It has been 31 years, I see no reason to expand the area NOW other than to pave the way for some other agenda. More adding insult to injury.

Sincerely,

Patricia Van Kirk

Exxon Valdez Oil Spill Trustee Council
Attention: Chair Jason Brune
Grace Hall Building
4230 University Drive, Ste. 220
Anchorage, AK 99508-4650

Dear Members of the Trustee Council:

I am a shareholder at ASRC, UIC, and KIC. I live in Fairbanks.

It is an injustice that was done on the land that has taken so long to rectify. I was personally impacted by the inequity and the horror of the spill, it taught me how big business and capitalism work, and I am glad that Alaska is finally getting some justice in this issue.

I support long term impacts for the benefit of the spill-impacted region and open processes and participation by and for the people of the region. I go to Valdez for work, sometimes once a year for the Playwright Festival. I have performed there several times. The impact of the spill is still prevalent and strong in the community. An endowment for the communities needs to be created in perpetuity. Arts, public health, and also some funding to prevent further abuses on the land.

Draft Resolution 20-A: Eliminates the annual Trustee Council public meeting and funding process and change reporting schedules. Since EVOS was established in 1991, numerous opportunities to provide public input and consider funding priorities are scheduled to take place each year. The most critical meeting for public input and consideration is the Trustee Council meeting. Since its inception, a demonstrable decrease in the number of annual Trustee and PAC meetings has become apparent. I object to this resolution.

Draft Resolution 20-B: A change to procedures for approval of multi-year projects. The EVOS Trust currently holds roughly \$188 million. That funding is meant to be of benefit to the region and its communities, people, and environment. Not only is an annual meeting by the Trustee Council not overly burdensome, it is an imperative to maintain any sense of public process, opportunity, or transparency. Annual review of proposals, ongoing projects and research is important to maintaining EVOS as an important entity for the long-term benefit of the region. I object to this resolution.

Draft Resolution 20-C: Combining habitat and research sub-accounts. Draft Resolution C would authorize the Council to combine the habitat and research sub-accounts into a single multipurpose account. To maintain alignment with the 1991 Consent Decree, it is important that the two accounts remain separate to ensure funding is directed to both habitat and research. The proposals, projects, and demands for habitat and research are different and therefore, the funding streams should not commingle. I object to this resolution.

Draft Resolution 20-D: Amendment to the 1994 Restoration Plan to incorporate an ecosystem approach to the oil spill boundary, which would allow funding outside of the spill impacted area. The EVOS Trust was originally established with \$900 million for the purposes of "restoring, replacing, enhancing, [and] rehabilitating" the spill impacted region, according to the 1991 Consent Decree. This resolution confuses

the original intent and scope of the moneys held within the Trust and would effectively decrease the injured peoples access to funding allocated beyond the spill impacted region. I object to this resolution.

I oppose resolutions A, B, C, and D. This money should be put into endowments for the benefit of communities in the spill zone in perpetuity.

Sincerely,

Allison Warden
